The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2005

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Elevation:	495 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	43076-A2 SYRACUSE WEST, NY
Most Recent Revision:	1978

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

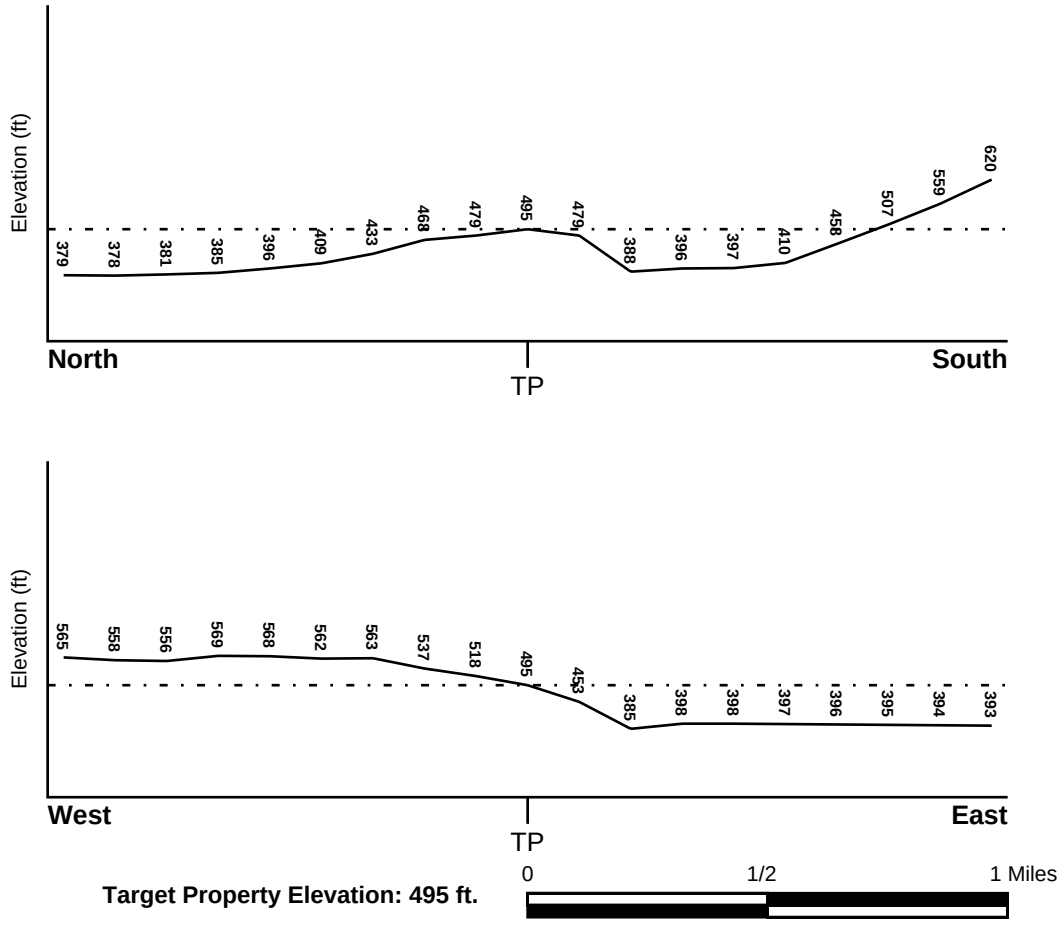
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
ONONDAGA, NY	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 3605950003E

3605950015E

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SYRACUSE WEST	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Silurian

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy fine sand
channery - silt loam

Surficial Soil Types: silt loam
loamy fine sand
channery - silt loam

Shallow Soil Types: loam
silt loam
channery - silt loam

Deeper Soil Types: silt loam
fine sand
unweathered bedrock
silty clay
gravelly - loam
very channery - loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Department of Environmental Conservation
Telephone: 518-402-8056
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

USER QUESTIONNAIRE RESPONSES

USER QUESTIONNAIRE 1 OF 2

Pursuant to ASTM E 1527-05 Appendix X3, in order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user must provide the following information (if available) to the environmental professional. Failure to provide the information could result in a determination that "all appropriate inquiry" is not complete. This form represents a type of interview and as such, the user has an obligation to answer all questions in good faith, to the extent of his or her actual knowledge.

1. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?
☑ No ☐ Yes If yes, please explain.

2. Are you aware of any activity and land use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?
☑ No ☐ Yes If yes, please explain.

3. As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?
☑ No ☐ Yes If yes, please explain.

4. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If no, and you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?
☑ No ☐ Yes If no, please explain.

5. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user: (a) Do you know of the past uses of the property?; (b) Do you know of specific chemicals that are present or were once present at the property?; (c) Do you know of spills or other chemical releases that have taken place at the property?; (d) Do you know of any environmental cleanups that have taken place at the property?
☑ No ☐ Yes If yes, please explain.

6. As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?
☑ No ☐ Yes If yes, please explain.

USER QUESTIONNAIRE 2 OF 2

Proceedings Involving the Property
Pursuant to ASTM E 1527-05 §10.9, as the user of this ESA do you know of (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property; (2) any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property; and (3) any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?
☑ No ☐ Yes If yes, please explain.

Helpful Documents Checklist
Pursuant to ASTM E 1527-05 §10.8, do you know whether any of the following documents exist related to the subject property, and if so, whether copies can and will be provided to PSI for review? Check all that apply:

☑ Environmental site assessment reports From 11 years ago
☐ Environmental compliance audit reports
☐ Environmental permits (for example solid waste disposal permits, hazardous waste disposal permits, wastewater permits, NPDES permits, underground injection permits)
☐ Registrations for above or underground storage tanks
☐ Registration for underground injection systems
☐ Material safety data sheets
☐ Community right-to-know plan
☐ Risk assessments
☐ Safety plans; preparedness and prevention plans; spill prevention, countermeasure and control (SPCC) plans; etc.
☐ Reports regarding hydrogeological conditions on the property or surrounding area
☐ Notices or other correspondence from any governmental agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property
☐ Hazardous waste generat on notices or reports
☐ Geotechnical studies
☐ Recorded activity and land use limitations (AULs)

EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Résumé

Janelle S. Snider

Staff Specialist, Schenectady, New York

Education

BS in Environmental Science, State University of New York at Plattsburgh, New York, 1998
MS in Civil and Environmental Engineering, Clarkson University, Potsdam, New York, 2001

Certifications/Registrations/Technical Training

New York State Department of Labor - Institute for Environmental Education, Inc. (IEE), Sampling Technician and Project Monitor Training; # AH 02-19053, 2002
New York State Department of Labor – IEE, Asbestos Inspector Training; # AH 02-19053, 2002
Phase II ESA Training, PSI, 2004
Phase I ESA Training, PSI, 2005
Indoor Air Quality/Mold Inspector Training, PSI, 2005
OSHA 40-Hour HAZWOPER, Institute for Environmental Education, Inc., 2005

Professional Experience

Ms. Snider has six years of experience in the environmental field. Her schooling along with her experience provide the necessary analytical, research, communication, and writing skills needed to perform Phase I Environmental Site Assessments and other projects. As an employee at PSI, she has taken on many projects and has provided the clients with excellent work.

Representative Phase I Environmental Site Assessment Project Experience

- Darden Restaurants, Inc., site located in Clay, New York – Phase I ESA on a residential property, including ground reconnaissance, records review and report preparation.
- Safeco, site located in Gallatin, New York – Phase I ESA on a residential property, including ground reconnaissance, records review and report preparation.
- Darden Restaurants, Inc., site located in Clay, New York – Phase I ESA on a vacant property, including ground reconnaissance, records review and report preparation.
- American Pad & Paper, LLC, sites located in Holyoke, Massachusetts – Phase I ESA on two industrial properties, including ground reconnaissance, records review and report preparation.
- Washington Mutual Bank, F.A., sites located in New York City, New York – Phase I ESAs on five residential properties, including ground reconnaissance, records review and report preparation.
- Macquarie Bank Limited, site located in Framingham, Massachusetts – Phase I ESA on a commercial shopping mall and associated property, including ground reconnaissance, records review and report preparation.
- NorthStar Advisory Group, sites located in Connecticut, Massachusetts and New York – Phase I ESAs on spaces in nine shopping malls, including ground reconnaissance, records review and report preparation.
- Washington Mutual Bank, F.A., sites located in Boston, Massachusetts – Phase I ESAs on two commercial properties, including ground reconnaissance, records review and report preparation.
- Schenectady Metroplex Development Authority, sites located in Schenectady, New York – Phase I ESAs on seven parking lots, including ground reconnaissance, records review and report preparation.
- Macquarie DDR Management Limited, sites located in Batavia and Cheektowaga, New York – Phase I ESAs on eight commercial retail properties, including ground reconnaissance, records review and report preparation.

Representative Phase II Environmental Site Assessment Project Experience

- Confidential Client, site located in Poughkeepsie, New York – Project Scientist for a Phase II ESA on multiple use commercial property. Project responsibilities included completion of field activities, and report preparation.
- Developers Diversified Realty Corporation, site located in Niagara Falls, New York – Project Scientist for a Phase II ESA on a commercial property that was formerly an industrial property. Project responsibilities included developing the completion of field activities and report preparation.
- Brinker International, site located in Queensbury, New York - Project Scientist for a Phase II ESA at a retail shopping center and commercial office complex. Project responsibilities included developing the completion of field activities and report preparation.
- Confidential Client, site located in Norwood, Massachusetts – Project Scientist for a Phase II ESA of a shopping center and commercial property. Project responsibilities included developing the scope of work, completion of field activities and report preparation.

Representative Underground Storage Tank Closure Project Experience

- County of Schenectady, site located in Schenectady, New York – Project Scientist for an underground storage tank (UST) closure project at a former gas station which required the removal of eight petroleum USTs. Responsibilities included UST and soil removal, soil sampling, waste disposal and report preparation.
- Schenectady Metroplex Development Authority, site located in Schenectady, New York – Project Scientist for a fuel oil tank removal project at an abandoned warehouse. Responsibilities included directing the tank removals, assessment of soil and groundwater conditions, disposal of soil and tank liquid contents and preparation of reports for the client and the NYSDEC.

Representative Groundwater Monitoring Project Experience

- County of Schenectady, site located in Schenectady, New York – Project Scientist responsible for the quarterly groundwater sampling and preparation of the groundwater monitoring reports.
- Confidential Client, site located in Cooperstown, New York – Project Scientist responsible for quarterly groundwater sampling and preparation of groundwater monitoring reports.

Representative RCRA Project Experience

- DASNY, site located in Taconic, New York – Project Scientist for a drum sampling project. Project included the sampling of rogue drums, interpretation of lab analysis and research of information to identify the drum contents.
- Confidential Client, site located in Watervliet, New York – Project Scientist, Responsibilities included core sample collection from an impacted plating floor and walls to support the remediation of a former military plating facility.
- Mitsubishi Motors, site located in Rochester, New York – Project Scientist involved in generating a chemical inventory at the facility.

Representative Hazardous Waste Remediation and Construction Project Experience

- Confidential Client, site located in Chester, New York – Project Scientist involved in vault closure sampling at a former slaughter house site.
- Developers Diversified Realty, site located in Chelmsford, Massachusetts – Project Scientist involved in the monitoring well removal and closure at an office building.
- Developers Diversified Realty, site located in Horseheads, New York – Project Scientist, responsibilities

included collection of soil samples around transformers for PCB content, post excavation soil samples for PCB content, Phase I ESA, sample collection of an unknown substance, groundwater testing, and peer observation of a tenants environmental investigation.

Representative Indoor Air Quality Project Experience

- Confidential Client, sites located in Everett and Leominster, Massachusetts – Project Scientist for an odor investigation in two commercial retail stores. Responsibilities included interviews, observations, sample collection, and communication of observed conditions.
- Confidential Client, site located in Rochester, New York – Project Scientist for a moisture investigation at a higher education facility. Responsibilities included interviews, observations, wall and ceiling moisture content readings, sample collection, and report preparation.
- DASNY, site located in Cairo, New York – Project Scientist for an IAQ investigation at a residence including observation, bulk sample collection, and air sample collection.

Representative Asbestos Inspection Project Experience

- Schenectady Metroplex Development Authority, sites located in Schenectady, New York – Asbestos inspection of approximately five retail and residential properties including assessment, sample collection and report preparation.
- Alcoa Fastening Systems, site located in Kingston, New York – Asbestos inspection of an approximately 140,000 square foot office and manufacturing building including assessment, sample collection and report preparation.
- Developers Diversified Realty, site located in Chelmsford, Massachusetts – Asbestos inspection of an approximately 300,000 square foot three-story office building including assessment, sample collection and report preparation.
- Confidential Client, sites located in Connecticut and New York – Demolition asbestos inspections of four restaurant buildings including assessment, sample collection and report preparation.
- Confidential Client, sites located in Connecticut, Massachusetts, and New York – asbestos inspections of three stores main retail area flooring including assessment, sample collection and report preparation.
- Confidential Client, sites located in Connecticut and New Jersey – asbestos inspections of five retail stores including assessment, sample collection and report preparation.

Environmental Professional – Phase I ESA, PSI, New York, 1999
Radiation Safety, X-Ray Fluorescence Operator, PSI, 1998
RMD LPA-1 Radiation Device Training, New York, 1998

Professional Experience

Mr. Gilbert has eight years of project experience with PSI and has been a Project Manager since 2002. Mr. Gilbert is responsible for coordinating asbestos and lead-based paint inspections in public and municipal sectors. As a lead-based paint risk assessor, he evaluates the condition and possible hazards associated with lead. Mr. Gilbert also performs Phase I environmental site assessments (ESAs) that involve reconnaissance, historical documentation research, interviews, and report generation. Additional duties include the scheduling and maintenance of field personnel on asbestos projects and communication of project status to owners and agency representatives. Mr. Gilbert also performs Indoor Air Quality investigations that involve the collection of air and bulk samples for mold spores and the assessment of onsite data into a field report.

Representative Asbestos/Industrial Hygiene and Property Assessment Project Experience

- Key Bank NA; Albany, New York – Environmental Professional, performed eight Phase I ESAs at various commercial properties in Albany. Performed ground reconnaissance, records review, and report generation.
- Saratoga Central School District; Saratoga Springs, New York – Project manager, coordinated asbestos and lead inspections district wide. Performed lead inspections and generated field reports for eight schools using an x-ray fluorescent device.
- OGS, Clinton Correctional Facility; Dannemora, New York – Managed and performed lead-based paint inspections and a risk assessment for 26 locations at the site. Upon completion, reports were generated.
- Beacon Education Management; South Buffalo, New York – Project Manager and lead inspector for the initial AHERA inspection for the South Buffalo charter school. Performed field testing and report generation.
- DASNY, SUNY Plattsburgh, New York-Project Manager for the on-going asbestos abatement project at MacDonough Hall. Responsible for scheduling the asbestos abatement personnel and providing guidance and technical support during the abatement.
- Hyatt Regency, Montreal, Canada- Industrial Hygienist responsible for performing visual inspections for the presence of surficial mold. Performed field work and report generation.
- Rensselaer Polytechnic Institute, Troy, New York-Project Manager for term contract work including lead-based paint, asbestos, mold, and environmental services. Performed scheduling, field work, and report generation.
- DDR; Buffalo region, New York – Environmental Professional, performed three Phase I ESAs at various commercial properties in western New York. Performed ground reconnaissance, records review, and report generation.

Re: Limited Phase II Site Investigation Report

File: 1192.001-S

Dear Mr. Benjamin:

On March 6 and March 7, 2008, Barton & Loguidice, P.C. (B&L) conducted a Limited Site Investigation to address potential environmental concerns noted in the February 11, 2008 Phase I Environmental Site Assessment performed by PSI at the 800 South Wilbur Avenue site in Syracuse, New York. The investigation included the installation of eleven soil borings and collection of two surface soil samples on the subject property. The objective of this Limited Site Investigation was to determine the potential for contamination associated with the former presence of petroleum products, paints, cleaning chemicals, and other hazardous materials in the general locations of the former oil house, paint/printing shop, hospital, and laundry area of the Syracuse State School for the Handicapped. An additional objective of this investigation was to inventory the accessible materials in the debris pile located south of the cooling tower and to assess the surface soil condition surrounding the pile.

Field Methods

A total of 11 borings were installed with a pick-up truck-mounted Geoprobe® unit by Paragon Environmental Construction, Inc., under the supervision of B&L on March 7, 2008. The general locations of the identified areas of concern were only partially accessible due to the current building footprint, contour of the site, and utilities. As a result, the soil borings were located adjacent to the accessible sides of the identified areas of concern. Boring numbers 1 through 3 are associated with the former paint/printing shop, B-3 through B-5 are associated with the former oil house, B-6 through B-8 are associated with the former hospital and B-9 and B-10 are associated with the former laundry area.

Each boring was installed with successive pushes of a four foot long core barrel, lined with a new acetate liner. Each four-foot section of soil was removed from the hole for field characterization. Borings were terminated following the detection of the presence of groundwater, probe refusal, or a depth of 12 feet. This methodology allowed for a determination of the soil structure, type, depth to groundwater, and presence of contamination, while minimizing probe hole depths and project cost.

The soil cores retrieved from each four foot sampling interval were logged and characterized for soil type, color, moisture saturation, and indications of petroleum contamination (Appendix A). Odor, presence of staining, and the use of a Photoionization Detector (PID) instrument were used to screen for the presence of volatile organic compounds. PID readings were obtained by scanning sections of each core, as well as the headspace atmosphere of a sealable plastic bag containing a composite of soil from the core.

The experience to listen.
The power to solve.

Soil Boring Results

The table below summarizes the depth of termination for each soil boring and the reason for termination.

Boring Identification Number	Depth of Termination (feet)	Cause of Termination
B-1	12	Target depth
B-2	12	Target depth
B-3	11	Refusal
B-4	12	Target depth
B-5	11.5	Refusal
B-6	10	Refusal
B-7	6.5	Refusal
B-7a	7	Refusal
B-8	10	Refusal
B-9	16	Water table
B-10	12.5	Water table & Refusal

Perched groundwater on the east side of the current facility (B-1 through B-4) was encountered at a depth of 5 to 6 feet. Perched groundwater was encountered in B-5 at 8 to 9 feet. There was no distinct groundwater table encountered in borings 6 through 8. Boring numbers 9 and 10 exhibited groundwater at approximately 12 feet. Soils can generally be described as fine sand to fine silty sand. At approximately 6 to 10 feet a transition was observed to dry light brown weathered bedrock material. Figure 1 illustrates the locations of the soil borings and samples collected for laboratory analysis.

A photoionization detector (PID) was utilized to screen soils from each bore hole for the presence of volatile organic compounds. Aside from B-10, which triggered a reading of more than 53 parts per million (ppm), all other detections were less than 3 ppm in either the initial screening or headspace sample bags.

Soil Boring Sample Analysis Results

Six soil samples were collected from the ten borings. The sampling locations and depth intervals were determined based on groundwater levels and the observation of suspect material. A composite sample was collected from each selected boring location and depth interval. The samples were submitted to Chemtech Laboratories for analysis of volatile and semi-volatile organic compounds (VOCs and SVOCs) by Environmental Protection Agency (EPA) Method 8260 and 8270, polychlorinated biphenyls (PCBs) by EPA Method 8082, and the target analyte list of 23 metals (TAL metals) EPA Method 6010 and 7471 (for mercury). There were no VOCs (based on the preliminary data) or PCBs detected above New York

State Department of Environmental Conservation (NYSDEC) Technical and Administrative Guidance Memorandum (TAGM) 4046 Soil Cleanup Objectives (SCOs) in the soil boring samples. Two metals, nickel and mercury, exhibited slight exceedances as compared to eastern United States background concentrations (locations B-2, B-4, B-5, and B-10).The samples collected from B-4 (near former oil house) and B-10 (near former laundry area) indicated elevated levels of the SVOC Benzo(a)pyrene slightly above the TAGM 4046 cleanup objective. Tables 1 and 2 summarize SCO exceedences for SVOCs and TAL metals, respectively. The full laboratory results are attached in Appendix B.

Debris Pile Inventory

The debris pile identified as a location of indiscriminate dumping in the February 11, 2008 Phase I report prepared by PSI was inventoried and surface soil samples were collected from two locations surrounding the base of the pile on the down-gradient side. The debris pile appeared to contain primarily construction and demolition debris (e.g. concrete, lumber, roof shingles, etc.), pallets, miscellaneous oil and beverage containers (< 5-gallons), timber, rock, gravel, and miscellaneous waste. Five to ten rusted cans of spray paint and one-gallon paint cans were identified above the debris pile, partially covered with snow in the adjacent parking area. One 55-gallon drum was identified below the debris pile, near the creek/culvert that flows along the south side of the debris pile. Approximately 4 to 5 pieces of old furniture were also noted in the area surrounding the debris pile.

Debris Pile Sample Analysis Results

Surface soil samples were collected by removing the top two to three inches of soil and root matter over an approximate two foot by two foot area. Composite soil samples were collected from the exposed areas; the sampling locations are indicated on Figure 1. The surface soil samples were submitted to Chemtech Laboratories for similar analysis as the soil boring samples; however, the surface soil samples were not analyzed for VOCs. Table 1 shows the elevated SVOCs detected in SS-1; there were no elevated SVOC detections in SS-2. Only zinc, copper, and mercury exceeded eastern United States background concentrations (see Table 2). There were no PCBs detected above TAGM 4046 SCOs. The full laboratory results are attached in Appendix B.

Conclusions and Recommendations

The SVOC detections above TAGM 4046 guidance values in SS-1 indicate the presence of elevated SVOCs. B&L recommends that Syracuse Resort Development relay these findings to the site owner. B&L recommends that the site owner contact the New York State Department of Environmental Conservation NYSDEC to disclose these findings as is required by law. This can be accomplished by calling the NYSDEC spill hotline at 1-800-457-7362.

The detection of Benzo(a)pyrene above the TAGM 4046 guidance value in B-4 and B-10 is a low-level exceedance and does not appear to constitute an environmental concern. The metal concentrations are only slightly elevated above eastern background concentrations and do not appear to be of significant environmental concern. No VOCs or PCBs were detected above TAGM 4046 guidance values.

The site investigation was limited to the subsurface soil borings and surface soil sample locations. To fully define the nature and extent of contamination identified, additional site investigation would be required in the indiscriminate dumping area.

Should you have any questions please feel free to call.

Very truly yours,

BARTON & LOGUIDICE, P.C.

1.0 INTRODUCTION AND PROJECT OVERVIEW

Lu Engineers was retained by Stantec Consulting Services, Inc. (Stantec) to provide a limited regulated building material survey of the former Syracuse Developmental Center (SDC) located at 800-802 S. Wilbur Avenue, in Syracuse, New York. This survey was performed in anticipation of proposed redevelopment of the subject property and funding through a USEPA Brownfields Assessment Grant awarded to the Greater Syracuse Land Bank (GSLB– the grantee) in 2019 (Cooperative Agreement No. BF-96255719-0).

The limited regulated building material survey was conducted in February and March of 2022 and was conducted in accordance with New York State Department of Labor (NYSDOL) Industrial Code Rule (ICR) 56 by certified inspectors from Lu Engineers. A copy of Lu Engineers' license and inspectors' applicable certifications can be found in Attachment A.

1.1 Records Review

Record drawings dated September 5, 1969, were reviewed as part of the RBM survey. The record drawings identified the following suspect asbestos-containing materials:

- Concrete Fireproofing
- Sprayed-On Fireproofing
- Vinyl Asbestos Floor Sheeting
- Plaster Board Fireproofing
- Vinyl Asbestos Floor Tile

A Phase I Environmental Site Assessment, prepared by PSI, Inc. dated February 11, 2009, was reviewed. The report identified the following potential environmental issues:

- 275-gallon diesel fuel tank in the "lowest level" (service Level) of the main building. This tank was observed during Lu Engineers on-site assessment and appeared to be partially filled with an undetermined liquid. Refer to Attachment E for the approximate location.
- Two (2) underground storage tanks (UST) were identified as being located on the property.
    - A 2,000-gallon UST was reportedly removed in 1998. Potential remains of the former UST location were observed in the asphalt surface located northeast of the former salt storage building(s).
    - A 5,000-gallon UST was reportedly abandoned in place on the property. The UST access cover was observed in the lawn area between the former salt storage building and the main building.

Freedom of Information Law (FOIL) requests were sent to the New York State Office of General Services and the New York State Department of Labor. Refer to Attachment B for all FOIL Request responses.

Previous sampling and testing data was not available to Lu Engineers review prior to conducting the RBM survey.

2.0 SITE INSPECTION

2.1 Existing Conditions

The former Syracuse Developmental Center has been vacant for several years and the existing building conditions observed during the field work portion described in Section 1.0 are deplorable. A substantial portion of the interior and exterior spaces of the building have been subject to vandalism, including broken or missing windows, theft of building materials, intentionally set fires, garbage, and debris strewn around the buildings. The buildings no longer have electrical power, including lighting, and portions of the roof systems have been damaged, which allows water and ice to accumulate throughout all levels of the buildings. Following Lu Engineers initial site visit, it was recommended that building access be restricted due to safety and health concerns inside the buildings.

2.2 Asbestos

One of the purposes of the visual inspection was to identify homogeneous areas of suspect asbestos containing materials that exist throughout the area of inspection, as defined in the scope of work. The Asbestos Hazard Emergency Response Act (AHERA) regulations define a homogeneous area as, "an area of surfacing material, thermal insulation material, or miscellaneous material that is uniform in color and texture." Furthermore, homogeneous areas should consist of the same age and application.

The inspectors identified homogeneous areas that were present within the building. The suspect asbestos materials were given a homogeneous identification number based on color and texture of the material. A list of homogeneous area numbers of the materials encountered is included with the Asbestos Result Table in Section 3.1.

Occupational Safety and Health Administration (OSHA) and 40 CFR 763 Subpart E – Asbestos Hazard Emergency Response Act (AHERA) bulk sampling protocols were followed.

- Three (3) samples of a homogenous surfacing material in quantities of 1,000 Square Feet (SF) or less were collected.
- Five (5) samples of a homogenous surfacing material in quantities greater than 1,000 SF but less than 5,000 SF were collected.
- Seven (7) samples of a homogenous surfacing material in quantities greater than 5,000 SF were collected.
- Three (3) samples of Thermal System Insulation (TSI) material were collected.
- Two (2) samples of each miscellaneous material were collected.

The suspect asbestos containing materials were extracted using various hand tools, containerized, and labeled with unique sample identification numbers. Samples were submitted to the laboratory using standard chain of custody protocols.

Paradigm Environmental Services was the New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) approved laboratory used for analysis. A copy of Paradigm's credentials is located in Attachment A.

Friable samples were analyzed using NYS ELAP Method 198.1, Polarized Light Microscopy (PLM). Non-friable organically bound (NOB) samples were analyzed using NYS ELAP Method 198.6 (PLM) and, if found to be negative, NYS ELAP Method 198.4, Transmission Electron Microscopy (TEM). All Samples were analyzed via stop positive protocols meaning that once a positive sample of a series was found, the other samples were not analyzed.

Fifty-seven separate (57) homogeneous materials were sampled from interior and exterior areas of the SDC as part of this survey. A total of ninety-seven (97) bulk samples were collected and analyzed.

The sample identification number indicated on the Bulk Sample Location Plan corresponds to the homogeneous ID numbers which are also located on the laboratory analytical report and the chain of custody forms. The Bulk Sample Location Plan, laboratory analytical report and the chain of custody forms are included in Attachment C.

2.2 PCB Caulks

Four (4) suspect PCB caulks were sampled during Lu Engineer's site investigation. The sample locations are indicated on the Sample Location Plans included in Attachment C. The sample number indicated on the plans corresponds to the sample numbers on the laboratory analytical report and the chain of custody which are included in Attachment C.

The samples were submitted to Paradigm Environmental Services, Inc, an NYSDOH certified laboratory. Bulk PCB samples were analyzed using EPA Method 8082. Paradigm's laboratory credentials are included in Attachment A.

2.3 Lead Paint

Lu Engineers conducted a lead-based paint inspection as part of this investigation. A total of three (3) bulk lead paint samples were collected from several painted surfaces. The sample location is indicated on the Sample Location Plans included in Attachment C. The sample number indicated on the plans corresponds to the sample number on the laboratory analytical report and the chain of custody which are included in Attachment C.

The samples were submitted to Paradigm Environmental Services, Inc., an ELAP-certified laboratory. A copy of Paradigms laboratory credentials is included in Attachment A. Results of Lu Engineer's visual assessment are included in Section 3.3.

An XRF lead based survey was part of Lu Engineers project scope. However, due to climate conditions at the time of the field survey, an XRF survey was not completed. The interior spaces were near freezing conditions at the time of the field survey and due to water filtration, the interior spaces were damp and or covered with ice. These conditions were not conducive to conducting an accurate XRF survey.

2.4 Miscellaneous Regulated Materials

Based on visual observations during Lu Engineers site visits, numerous regulated materials were observed throughout all levels of the facility. Some of the regulated materials identified include, but are not limited to:

- Paints (latex and oil-based)
- Unmarked drums (partially full and empty)
- Hydraulic oil containers
- Lubricant containers
- PCB ballasts
- Fluorescent light bulbs
- Mercury Vapor Lighting
- HID light bulbs
- Mold growth
- Refrigerant

Miscellaneous Hazards:

- Hypodermic needles
- Fire debris (unidentifiable)
- Garbage and debris

3.0 ANALYTICAL RESULTS

3.1 Asbestos Results

As defined by the New York State Department of Labor (NYSDOL) 12 NYCRR 56, a sample is considered to be asbestos containing if it contains greater than 1% asbestos by weight based on laboratory analysis.

A list of Homogeneous Areas (HA) identified for the building area surveyed is included below. The **bold** and ***italicized*** HA description indicates that the material is positive, based on the sample results.

Homogeneous Area No. (HA)	Description	Condition	Friability	Asbestos Content
1	White Finish Coat Plaster	Poor	F	NAD
2	Grey Rough Coat Plaster	Poor	F	NAD

NAD – No Asbestos Detected
F – Friable
NF – Non-Friable

Lu Engineers scope to provide a Limited Regulated Building Material Survey was not comprehensive. Therefore, the following structures located on the property were visually assessed for suspect asbestos materials:

Former amphitheater structure:

- Roofing materials
- Caulk

Former chiller unit structure:

- Gaskets

Former salt barn structures

- No suspect asbestos-containing materials observed.

3.2 PCB Caulk Results

EPA defines PCB bulk waste, "as waste derived from manufactured products containing PCBs in a non-liquid state, at any concentration where the concentration at the time of designation for disposal was > 50 ppm PCBs". Solid wastes containing 50 ppm by weight or greater are listed hazardous wastes in New York State (6 NYCRR Part 371.4(C)). The following table summarizes the PCB sampling results:

Sample No.	Description	PCB Content (ppm)	Asbestos Containing
PCB-1	Black Window Glaze	<4.03	Yes
PCB-2	***Grey Exterior Window Caulk (Side)***	***1,590***	***No***
PCB-3	Grey Exterior Window Caulk (Bottom)	7.90	No
PCB-4	Grey Exterior Expansion Joint Caulk	<38.8	No

A ***bold and italicized*** Sample number indicates that the building material has a PCB concentration that is equal to or greater than 50 ppm based on analytical results.

3.3 Lead Paint Results

According to the United States Environmental Protection Agency (EPA), paint is considered lead-based if the concentration is equal to or greater than 0.5% by weight.

According to the Occupational Safety and Health Administration (OSHA), lead means metallic lead, all inorganic lead compounds, and organic soaps with any concentrations of lead. Therefore, all samples collected are considered lead containing per OSHA standards.

Lu Engineers collected a total of three (3) bulk lead paint samples from various locations of the building. The samples were submitted to Paradigm Environmental Services, Inc., an ELAP-certified laboratory. A list of the areas sampled for this survey is included below. The bold and italicized description indicates that the material is positive for lead per EPA standards, based on the sample results.

Sample No.	Description	Lead Conc. (% by Wt.)
LP-1	White Paint – Common Area (Top Layer)	<0.00588
LP-2	White Paint – Common Area (Bottom Layer)	<0.00397
LP-3	White Paint – Resident Area	0.0251

3.4 Regulated Materials

Visible mold growth was observed throughout the former SDC facility. Mold impacted areas ranged from less than 10 square feet to greater than 10 square feet in area. In general, mold growth was observed in approximately 25% of the interior spaces of the former SDC.

Mercury vapor, florescent and high intensity discharge (HID) bulbs were observed throughout the former SDC facility. Most of the bulbs observed were not intact. Lu Engineers estimates that approximately 60% of the former SDC is contaminated with debris from mercury vapor, florescent and HID bulbs.

Lu Engineers did not observe exit signs than contained tritium, a naturally occurring, regulated, radioactive material.

4.0 ASBESTOS MATERIALS AND APPROXIMATE QUANTITIES

Asbestos exists throughout the inspected areas. Based on the analytical results, the following table identifies the Homogeneous Areas that contain asbestos along with the material description and approximate quantity.

Homogeneous Area No. (HA)	Material Description	Estimated Quantity
10	Tan Pebble Pattern Linoleum	45,790 SF
11	Tan Adhesive	45,790 SF
17	Grey 12”x12” Floor Tile	84,760 SF
18	Black Floor Tile Mastic	84,760 SF
20	Brown 12”x12” Floor Tile	100,785 SF
21	Black Mastic	105,425 SF
26	Black Window Glaze	7,500 LF
28	Brown Glue Puck	116,000 SF
29	White Fibrous Door Insulation	16,800 SF
30	Gray Fibrous Sprayed on Fireproofing	255,400 SF
34	Black Roof Flashing	11,250 SF
47	Grey Grout	19,500 SF
49	Green 12”x12” Floor Tile	83,310 SF
50	Green Pebble Print Linoleum	20,330 SF
51	Gray Fibrous Paper Backing	20,330 SF
57	Grey Set Bed	3,720 SF

LF = Linear Feet
SF = Square Feet

5.0 LIMITATIONS OF THE INVESTIGATION

This report has been prepared for the exclusive use of the client. This report relies on information supplied by the building owner, public information, and other sources of information. Lu Engineers has prepared this report in accordance with accepted practices within the industry.

This report identifies and assesses the location, quantity, and condition of materials that were accessible and visible at the time of sampling. The condition of the suspect materials is based on the actual inspection date. The quantities indicated in the report are based on the visual inspection and are only estimates of the material present. Additional quantities may exist above ceilings, behind walls or in areas of the building that may have been inaccessible.

This survey is not intended to be an abatement design. Per NYCRR 56, a certified Project Designer must complete an abatement design.

This survey is not intended to be a pre-demolition survey of all the buildings located on the property.

6.0 RECOMMENDATIONS

6.1 Asbestos Containing Materials

Asbestos containing materials have been identified as part of this assessment as shown in Section 4.0. Approximate locations of asbestos containing materials and a summary of quantities are included in Attachment D.

NYCRR 56 requires that a copy of this survey be submitted to the local agency where the demolition permit will be issued and the regional office of the New York State Department of Labor. Upon acceptance of this report, Lu Engineers can submit this report to the NYSDOL upon request of the client.

In accordance with 12 NYCRR 56, no renovation or demolition work shall be commenced by any owner or agent prior to completion of asbestos abatement performed by a licensed asbestos abatement contractor. NYSDOL regulations require that the asbestos containing material that will be disturbed by the renovation or demolition be removed prior to any disturbance of the material.

If suspect asbestos containing materials not identified in this asbestos survey report are discovered during the demolition and/or renovation process; it is required that the presence, location and quantity of newly discovered material, be conveyed within twenty-four (24) hours of discovery to the building owner or their representative. All activities must cease in the area where the presumed asbestos containing material or suspect miscellaneous ACM is found, until a licensed asbestos contractor appropriately assesses and manages the discovered materials.

In General, all levels appear to be contaminated with asbestos materials. Based on the observed condition of the building on the date of this survey, it is recommended that access to interior spaces of all structures be restricted.

6.2 PCB Caulk

Caulks containing 50 parts per million (ppm) by weight (on a dry weight basis for other than liquid wastes) or greater of PCBs may be listed as hazardous waste in accordance with New York State Department of Conservation regulations (6 NYCRR Part 371). PCB wastes are also regulated by EPA in the 40 CFR Part 761 regulations.

PCB containing caulks were identified as part of this survey that will require special handling and disposal when removed.

6.3 Lead Paint

According to the United States Environmental Protection Agency (USEPA), paint is considered lead based if the concentration is equal to or greater than 0.5% by weight or 1.0 mg/mm^2. The Occupational Safety and Health Administration (OSHA) Regulation in 29 CFR 1926.62 considers any amount of lead in paint to be of concern. The regulation states that the employer shall assure that no employee is exposed to lead concentrations greater than fifty micrograms per cubic meter (50 mg/m^3) of air averaged over an eight-hour period.

Lead Paint was not identified as part of this survey that will require special handling and disposal when removed. However, a lead worker protection specification, consistent with OHSA regulations, is recommended for demolition.

6.4 Miscellaneous Regulated Materials

Based on site observations of the regulated miscellaneous materials found throughout all of the buildings included in this survey, it is recommended that a specification be developed for the proper disposal of the regulated materials identified. The specification should include containment, cleanup and disposal procedures for removal of the materials.

Re: FOIL Number OGS-22-02-018

Dear Mr. Smith:

This letter responds to your request for records under the Freedom of Information Law regarding “Asbestos related documents - Syracuse Developmental Center (former) 800 S. Wilbur Avenue, Syracuse 13204.”

The Office of General Services has conducted a diligent search for records and was not able to locate any records responsive to your request.

Pursuant to Public Officers Law §89(4)(a) you have 30 days to submit a written appeal of this determination to:

Office of General Services FOIL Appeals Officer
Empire State Plaza
Corning Tower Building, 36th Floor
Albany, NY 12242-0001

Sincerely,

Michelle Rosales

Re: FOIL Number OGS-22-02-018

Dear Mr. Smith:

This will acknowledge receipt of your request for records under the Freedom of Information Law received by Office of General Services on February 11, 2022. The request was for "Asbestos related documents - Syracuse Developmental Center (former) 800 S. Wilbur Avenue, Syracuse 13204".

Your request has been forwarded to the appropriate program area(s) to identify documents that are responsive to your request and which may be made available pursuant to all applicable provisions of the Freedom of Information Law.

A determination as to whether your request is granted or denied will be reached in approximately 20 business days or we will notify you in writing if the responsible program area(s) should require additional time to locate, assemble and review documents that may be responsive to your request.

Please note that, pursuant to Article 6 of the Public Officers Law, a charge may be applied to your request, including the actual cost of the medium used to respond to your Freedom of Information Law request and/or other related costs. When responsive records have been identified, you will be informed of any cost and how payment should be made.

Sincerely,

Michele Rosales

Re: Freedom of Information Law (FOIL) Request
Our File No.: FL-22-0137

Dear Mitchell Smith:

This letter is in response to your request for New York State Department of Labor records dated Feb 11, 2022, in which you requested:

Asbestos records Syracuse Developmental Center

The Department conducted a diligent search based on the information provided and did not locate any records responsive to your request.

A contactor name must be provided to search for notification records prior to 1/1/2005

For notification records after 5/15/2007 to present date please go to:
https://dol.ny.gov/asbestos-control-bureau

You may submit a written appeal of this decision within 30 days by mail to: Commissioner of Labor, New York State Department of Labor, Harriman State Office Campus, Building 12, Room 500, Albany, NY 12240. You must state a basis for appeal, attach a copy of this letter, and mark the letter and envelope as "FOIL Appeal."

Very truly yours,

Jill Archambault

KEY TO NOB COLUMN SYMBOLS
No Symbol in the NOB column denotes sample analyzed by ELAP Method 198.1 (PLM).
√ NOB (non-friable organically bound)denotes material analyzed by ELAP Method 198.6 (PLM) and 198.4 (TEM) as noted.
V̈ denotes material analyzed by ELAP Method 198.6 (PLM) per NYSDOH. This Method does not remove vermiculite and may underestimate the level of asbestos present in a sample containing greater than 10% vermiculite.
 # denotes friable material analyzed by ELAP Method 198.6 (PLM) and 198.4 (TEM) as noted.
X denotes sample prepped only by ELAP Method 198.6.
**** Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials.**
Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos containing.

PLM Bulk Asbestos Analysis by New York State Department of Health, ELAP Method 198.1 ,198.4 and 198.6 ("Polarized Light Microscopy and Transmission Electron Microscopy Methods for Identifying and Quantitating Asbestos in Bulk Samples and in Non-Friable Organically Bound Bulk Samples.")or EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab Code 200530-0),

PLM & TEM BULK ASBESTOS ANALYSIS REPORT
via NYSDOH ELAP Method 198.1,198.4 and 198.6

Client: Lu Engineers
Location: Syracuse Development Center
800 South Wilbur Avenue, Syracuse, New York
Sample Date: 2/22-23/2022

Job No: 1201-22

Client ID	Lab ID	Sampling Location	Description	PLM Asbestos Fibers Type & Percentage	PLM Total Asbestos	NOB	TEM Asbestos Fibers Type & Percentage	TEM Total Asbestos	PLM Non-Asbestos Fibers Type & Percentage	Non-Fibrous Matrix Material %
27-A	9683	Third Floor at 3B	Gray Gypsum Deck	None Detected	0%		Not Required	N/A	Cellulose 4% Fiberglass 1%	95%
29-A	9684	Third Floor at 3B	White Fibrous Door Insulation	Chrysotile 8.3%	8.3%		Not Required	N/A	Mineral Wool 20%	71.7%
30-A	9685	First Floor on Steel	Gray Fibrous Sprayed On Fireproofing	Chrysotile 29%	29%		Not Required	N/A	Mineral Wool 20%	51%
30-B	9686	Second Floor on Steel	Gray Fibrous Sprayed On Fireproofing	None Detected	0%		Not Required	N/A	Cellulose 10% Mineral Wool 25%	65%
31-A	9687	Exterior of Second Floor Unit C on Overhang	White Finish Coat Plaster	None Detected	0%		Not Required	N/A	None Detected	100%
32-A	9688	Exterior of Second Floor Unit C on Overhang	Gray Rough Coat	None Detected	0%		Not Required	N/A	None Detected	100%

KEY TO NOB COLUMN SYMBOLS
No Symbol in the NOB column denotes sample analyzed by ELAP Method 198.1 (PLM).
√ NOB (non-friable organically bound)denotes material analyzed by ELAP Method 198.6 (PLM) and 198.4 (TEM) as noted.
V̈ denotes material analyzed by ELAP Method 198.6 (PLM) per NYSDOH. This Method does not remove vermiculite and may underestimate the level of asbestos present in a sample containing greater than 10% vermiculite.
 # denotes friable material analyzed by ELAP Method 198.6 (PLM) and 198.4 (TEM) as noted.
X denotes sample prepped only by ELAP Method 198.6.
**** Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos containing.**

PLM Bulk Asbestos Analysis by New York State Department of Health, ELAP Method 198.1 ,198.4 and 198.6 ("Polarized Light Microscopy and Transmission Electron Microscopy Methods for Identifying and Quantitating Asbestos in Bulk Samples and in Non-Friable Organically Bound Bulk Samples.")or EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab Code 200530-0),

KEY TO NOB COLUMN SYMBOLS
No Symbol in the NOB column denotes sample analyzed by ELAP Method 198.1 (PLM).
√ NOB (non-friable organically bound)denotes material analyzed by ELAP Method 198.6 (PLM) and 198.4 (TEM) as noted.
V̈ denotes material analyzed by ELAP Method 198.6 (PLM) per NYSDOH. This Method does not remove vermiculite and may underestimate the level of asbestos present in a sample containing greater than 10% vermiculite.
 # denotes friable material analyzed by ELAP Method 198.6 (PLM) and 198.4 (TEM) as noted.
X denotes sample prepped only by ELAP Method 198.6.
**** Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials.**
Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos containing.

PLM Bulk Asbestos Analysis by New York State Department of Health, ELAP Method 198.1 ,198.4 and 198.6 ("Polarized Light Microscopy and Transmission Electron Microscopy Methods for Identifying and Quantitating Asbestos in Bulk Samples and in Non-Friable Organically Bound Bulk Samples.")or EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab Code 200530-0),

KEY TO NOB COLUMN SYMBOLS

No Symbol in the NOB column denotes sample analyzed by ELAP Method 198.1 (PLM).

√ NOB (non-friable organically bound)denotes material analyzed by ELAP Method 198.6 (PLM) and 198.4 (TEM) as noted.

Ṽ denotes material analyzed by ELAP Method 198.6 (PLM) per NYSDOH. This Method does not remove vermiculite and may underestimate the level of asbestos present in a sample containing greater than 10% vermiculite.

 # denotes friable material analyzed by ELAP Method 198.6 (PLM) and 198.4 (TEM) as noted.

X denotes sample prepped only by ELAP Method 198.6.

**** Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos containing.**

PLM Bulk Asbestos Analysis by New York State Department of Health, ELAP Method 198.1 ,198.4 and 198.6 ("Polarized Light Microscopy and Transmission Electron Microscopy Methods for Identifying and Quantitating Asbestos in Bulk Samples and in Non-Friable Organically Bound Bulk Samples.")or EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab Code 200530-0),

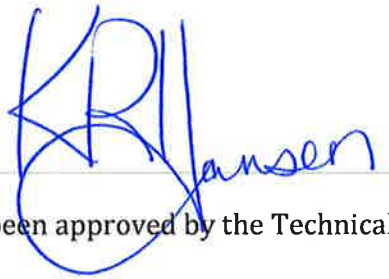
Analytical Report For

Lu Engineers, Inc.

For Lab Project ID

221257

Referencing



SDC 50502-01

Prepared

Friday, April 1, 2022

Any noncompliant QC parameters or other notes impacting data interpretation are flagged or documented on the final report or are noted below:

Reduced sample size used for Lead analysis due to limited sample volume. Kindly refer to Chain of Custody Supplement for the affected sample(s).

Certifies that this report has been approved by the Technical Director or Designee

179 Lake Avenue • Rochester, NY 14608 • (585) 647-2530 • Fax (585) 647-3311 • ELAP ID# 10958

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

"<" = Analyzed for but not detected at or above the quantitation limit.
"E" = Result has been estimated, calibration limit exceeded.
"H" = Denotes a parameter analyzed outside of holding time.
"Z" = See case narrative.
"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.
"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.
"B" = Method blank contained trace levels of analyte. Refer to included method blank report.
"J" = Result estimated between the quantitation limit and half the quantitation limit.
"L" = Laboratory Control Sample recovery outside accepted QC limits.
"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.
"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.
"" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*
"(1)" = Indicates data from primary column used for QC calculation.
"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.
"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.

GENERAL TERMS AND CONDITIONS
LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, term or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

Warranty. Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

Scope and Compensation. LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB wi use LAB default method for all tests unless specified otherwise on the Work Order.
Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

Prices. Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

Limitations of Liability. In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.
LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.
All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.
Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

Hazard Disclosure. Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

Sample Handling. Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.
Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on th final report.
Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.
LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

Legal Responsibility. LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

Assignment. LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

Force Majeure. LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

Law. This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

1.0 INTRODUCTION

LaBella Associates, D.P.C. ("LaBella") was retained by Albanese Development Corporation (ADC/Client) to conduct a Preliminary Phase II Environmental Site Assessment (ESA) at the property located at 800-802 South Wilbur Avenue, Syracuse, New York, hereinafter referred to as the "Site" (see Figure 1). This Preliminary Phase II ESA has been performed in conformance with the scope and limitations of ASTM Practice E 1903-19.

The overall property addressed as 800-802 South Wilbur Avenue and historically utilized as the Syracuse Developmental Center comprises an approximately 47.8-acre area. However, for the purposes of this Preliminary Phase II ESA, the Site extent was limited to the 21.5-acre area depicted on attached Figure 2. This area was selected based on a prior conceptual redevelopment plan.

1.1 Objective

The objective for the Preliminary Phase II ESA was to assess whether the RECs identified in the Phase I ESA report by LaBella dated October 31, 2022, including review of other previous environmental reports, have impacted the subsurface soil and groundwater at the Site and to evaluate current soil and groundwater conditions for use in planning for redevelopment of the Site. These potential areas of concern include the following and are depicted on Figure 2.

- Former greenhouses in the central and northern portions of the Site.
- A former oil house in the central portion of the Site.
- A former paint shop and former carpenter shop in the northern portion of the Site.

In addition to the above, based on the prior history of structures at the property, urban fill consisting of ash, cinders, etc. may be present at the Site. These materials are considered a regulated solid waste in New York State. In addition, the objective was to fill in data gaps from prior investigations and assess for NYSDEC Brownfield Cleanup Program (BCP) eligibility.

1.2 Special Terms & Conditions

The findings of this Preliminary Phase II ESA are based on the scope of work and project objectives as stated in LaBella Proposal number P2203643 dated October 31, 2022.

1.3 Limitations & Exceptions

Work associated with this Preliminary Phase II ESA was performed in accordance with generally accepted environmental engineering and environmental contracting practices for this region. LaBella Associates, D.P.C., makes no other warranty or representation, either expressed or implied, nor is one intended to be included as part of its services, proposals, contracts or reports.

Preliminary Phase II ESAs do not generally require an exhaustive assessment of environmental conditions on a property and are generally intended to assess specific potential environmental concerns identified at a site from a Preliminary Phase I ESA, Transaction Screen, or similar assessment. The Phase II ESA is not intended to delineate the nature and extent of contamination at the site, nor address complex geological settings, the fate and transport characteristics of certain hazardous substances. physical limitations imposed by the location of utilities and other man-made objects, and the limitations of assessment technologies.

In addition, LaBella cannot provide guarantees, certifications or warranties that the property is or is not free of environmental impairment or other regulated solid wastes. The Client shall be aware that the data and representative samples from any given soil sampling point or monitoring well may represent conditions that apply only at that particular location, and such conditions may not necessarily apply to the general Site as a whole.

Due to the poor condition of the building interior and redevelopment plans to include demolition of the existing structure, sampling was not conducted inside the building as part of this Preliminary Phase II ESA.

2.0 BACKGROUND

2.1 Site Description & Features

The overall redevelopment project comprises a 47.8-acre area and is planned to be redeveloped for residential and manufacturing purposes. The Site consists of the approximately 21.5-acre area that is planned to be redeveloped for multi-family residential purposes, as depicted on Figure 2. The area immediately south and southwest of the property boundary is part of the greater property but not within the current Site footprint; as such, investigation was not conducted in this area as part of this Preliminary Phase II ESA.

The existing structure at the Site includes portions of a greater four-story, 628,808 square foot institutional building constructed between 1970 and 1971 that has most recently been used as offices and storage; this structure has been vacant for approximately 10 years.

2.2 Physical Setting

The Site is located in the City of Syracuse within a predominantly urban area; surrounding properties are utilized for residential, commercial, and educational purposes.

2.3 Adjacent Property Use

The Site is bordered by the following properties:

Direction	Land Use
North	Commercial (Arc of Onondaga - 600 South Wilbur Avenue) Commercial (Rosamond Gifford Zoo - 1 Conservation Place)
East	Residences (601-627 South Wilbur Avenue)
South	Southern portion of 800-802 Wilbur Avenue
West	Vacant commercial (410 Grand Avenue)

2.4 Site History & Land Use

Based on the historical records reviewed, the following information was obtained related to the Site:

- Between at least 1892 and 1967 the Site was developed with various former structures and utilized as a psychiatric facility including an oil house, paint/printing shop, greenhouses, and carpentry shop, which were present at various times between at least 1911 and 1967.

- From 1970-1971 through current the Site was developed with the current Site Building and utilized as a psychiatric facility through the early 2000s with later uses consisting of office space and storage. The Site has been vacant for approximately 10 years.

2.5 Summary of Previous Studies

LaBella recently completed a Phase I ESA (October 31, 2022) which included the review of the following prior environmental reports.

- Phase I ESA report prepared by PSI dated February 11, 2008
- Limited Phase II ESA report prepared by B&L dated March 14, 2008

The following RECs were identified in connection with the Site:

- An oil house, paint/printing shop, greenhouses, and carpentry shop were located on the Subject Property at various times between at least 1911 and 1967. It is likely that solvents, paints, cleaning chemicals, and other hazardous materials and/or petroleum products were utilized and stored at these areas and other areas of the Subject Property; material handling practices are unknown. While a Limited Phase II ESA was conducted at the Subject/Greater Property in 2008 to address historical uses, that scope did not include an investigation of each area of likely chemical use/storage. As such, there is the potential for impact to exist in areas not previously investigated based on the historical uses of the Subject Property.
- Evidence of fill material, including areas of mounding and potential settling, were observed throughout exterior areas on the Subject Property. The nature of fill material present on-site is unknown. LaBella notes that fill material generated as part of Subject Property redevelopment/construction activities may be subject to chemical testing and/or proper handling requirements which may impact the overall project budget.
- The Subject/Greater Property was identified as a RCRA Non-Generator with no unresolved violations and as a Manifest Facility. Wastes generated and/or transferred from the Subject Property have included PCBs, various metals, PCE, TCE, corrosive, ignitable, and reactive wastes, and spent non-halogenated solvents. While there were no records of release reported, these listings are indicative of past use/storage/handling of various hazardous materials on the greater property.

No CRECs, HRECs, de minimis conditions, or significant data gaps were identified in connection with the Subject Property.

While not considered a REC, CREC, HREC, de minimis condition, or significant data gap at this time, LaBella also noted the following:

- Nine five-gallon buckets of emulsified asphalt and five 55-gallon drums of floor cleaning chemicals were observed stored within the Site Building. Minor staining was observed proximate one five-gallon bucket, however, no floor drains were observed in the vicinity of the staining. Given the nature and location of the staining such is not considered to pose a significant environmental concern at this time. However, as it is LaBella's understanding that the Site Building is to be demolished, it is recommended that all hazardous chemicals be removed from the Site Building prior to demolition.
- Vent pipes were observed on the exterior of the Site Building. Based on the location of the vent pipes, it is presumed that an AST is currently or was historically located in the Site

Building, potentially a diesel AST associated with a backup generator or chlorine AST reported to have been located on-site based on reviewed previous studies. Based on the condition of the Site Building, LaBella was unable to access the entirety of the structure. The presence of ASTs within the Site Building are not considered to pose a significant environmental concern at this time. However, as it is LaBella's understanding that the Site Building is to be demolished, it is recommended that any inactive ASTs be emptied and properly removed from the Site Building prior to demolition.

- Areas of solid waste disposal, including household debris, were observed on the Subject Property. LaBella recommends that these materials be collected and properly disposed of as a best management practice.

3.0 FIELD INVESTIGATION

The following Scope of Work was performed:

3.1 Soil Boring Installation and Sampling

Prior to the initiation of subsurface work, an underground utility stake-out via *Dig Safely New York* was completed at the Site (ticket number 11252-000-004) to locate utilities in the areas where the subsurface assessment would take place.

In addition, LaBella retained the services of a geophysical survey sub-consultant to perform nonintrusive subsurface locating using a magnetometer and ground penetrating radar (GPR) capable of detecting and delineating metallic and buried objects in the subsurface. The geophysical work was conducted at the Site on November 22, 2022, by On The Mark Utility Locating Services, Inc. (OTM) under LaBella supervision. The work was performed specifically to clear all proposed soil boring and temporary well locations planned for sampling of any anomalies, utilities or buried objects.

The equipment utilized by OTM during the work included, Pipehorn 800HL (Radio Frequency), Radiodetection CAT4 (Radio Frequency) and a Mala Ground Penetrating Radar (GPR) unit.

It should be noted that no geophysical anomalies or metallic or buried objects were identified in the proposed soil boring and temporary well locations utilized for sampling.

3.1.1 Soil Borings

A total of ten (10) soil borings were advanced at the Site on November 29 and November 30, 2022, designated SB-01 through SB-10, under supervision of LaBella personnel. Soil borings were advanced at the Site to depths ranging from approximately 12.5 to 25-feet (ft) below ground surface (bgs) into the overburden with a track-mounted Geoprobe® Systems Model 6620 direct-push sampling system. The use of direct-push technology allows for rapid sampling, observation, and characterization of overburden soils. The Geoprobe utilizes a 5-ft MacroCore® sampler with disposable polyethylene sleeves. Soil cores are retrieved in 5-ft sections and are cut from the polyethylene sleeves for observation and sampling. The MacroCore® sampler was decontaminated between boring locations using an Alconox® and potable water solution followed by a potable water rinse. Soil boring locations are depicted on Figure 2.

Soil samples were collected continuously from the ground surface to the bottom of each boring. Soil samples were visually and physically examined by LaBella personnel and observations made of the general lithology, visible layering, evidence of nonnative fill/historic fill materials, indications of chemical or other staining, odors, and other distinctive features. Soils from soil borings were field screened for the presence of Volatile Organic Compounds (VOCs) using a PID equipped with a 10.6 electronvolt (eV) lamp. Positive indications from any of these screening methods are collectively referred to as "evidence of impairment". PID data and observations from each boring are included on the soil boring logs presented in Appendix 1.

Samples were selected from the borings for laboratory analysis based upon depth, apparent depth of the top of the overburden groundwater table, field screening, and PID readings to address the potential environmental concerns identified at the Site. The soil samples submitted for laboratory analysis are listed in Section 3.3 and are summarized in Section 4.3. Investigation locations were located with a global positioning system.

3.1.2 Shallow Soil Borings

A total of four (4) shallow soil borings were advanced at the Site on November 30, 2022, designated SB-11 through SB-14, under supervision of LaBella personnel. Soil borings were advanced at the Site to depths ranging from approximately 0 to 2-ft bgs utilizing the direct-push sampling system and methods described above. Soil boring locations are depicted on Figure 2.

Soil samples were collected from a depth of 0-1 ft bgs and 1-2 ft bgs from each boring (eight (8) total samples). Soil was field screened for evidence of impairment as described above. Soil was also placed soil into a Ziploc® bag and screened using a Delta handheld x-ray fluorescence (XRF) meter by placing the XRF meter in front of the sample for a duration that allows the instrument to analyze the chemical composition of the soil sample for lead. XRF readings are provided in a results table in Section 4.

All eight (8) shallow soil samples were submitted for laboratory analysis listed in Section 3.3 and are summarized in Section 4.3. Investigation locations were located with a global positioning system.

3.2 Groundwater Monitoring Well Installation and Sampling

Four (4) soil borings were converted into temporary shallow overburden groundwater monitoring wells (designated as TW-01 (SB-01), TW-02 (SB-08), TW-03 (SB-09) and TW-04 (SB-04). Each well was constructed with 10-ft of 0.010-slot well screen of 1-inch inner diameter Schedule 40 polyvinyl chloride (PVC) screen attached to solid riser piping of the same material to complete the well. The wells were installed as an overburden well that was intended to intersect the top of the overburden groundwater table. The annulus was sand packed with quartz sand to a nominal depth of 1-ft above the screen section and a bentonite seal was placed above the sand to near the ground surface. The groundwater monitoring well construction logs are included in Appendix 1.

It should be noted that while four (4) temporary shallow overburden groundwater monitoring wells were installed, only one well, TW-04 (SB-04), produced sufficient groundwater for well development and sampling.

The three remaining wells which did not produce groundwater initially, TW-01 (SB-01), TW-02 (SB-08) and TW-03 (SB-09), were reassessed on December 2, 2022 and December 5, 2022 for evidence of groundwater. Evidence of groundwater in these wells was not identified. As such, these wells could not be developed or sampled.

On November 30, 2022, a static water level (SWL) was collected from TW-04 (SB-04) prior to development. The SWL was identified at 4.6 ft bgs. The well was developed using a peristaltic pump until three well volumes were removed. A peristaltic pump was used to collect a groundwater sample from TW-04 (SB-04) to limit turbidity. Immediately prior to sampling, a turbidity reading was collected in the field utilizing a Lamotte 2020we turbidity meter. Turbidity of groundwater in TW-04 (SB-04) was 17.4 NTU prior to sampling. Well development and turbidity are documented on the well construction logs.

The groundwater sample was submitted for laboratory analysis listed in Section 3.3 and is summarized in Section 4.3. Investigation locations were located with a global positioning system.

3.3 Laboratory Analytical Program

Samples selected for analysis were placed directly into laboratory-supplied containers, preserved as appropriate in a cooler, submitted under chain-of-custody protocol to Alpha Analytical in Westborough, Massachusetts, which is a New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Program (ELAP) certified laboratory. A laboratory courier was utilized to transport the samples to the lab.

LaBella submitted the following samples for laboratory analysis.

Sample ID	Sample Matrix	Sample Depth or Well Screen Interval (ft bgs)	Laboratory Analysis			
			VOCs	SVOCs	Metals	Pesticides
SB-02, 10-12.5	Soil	10-12.5	X			
SB-03, 5-7.5	Soil	5-7.5	X	X	X	
SB-06, 7.5-10	Soil	7.5-10	X	X	X	X
SB-08, 7.5-10	Soil	7.5-10	X	X	X	X
SB-09, 10-12.5	Soil	10-12.5	X	X	X	
SB-11, 0-1	Soil	0-1			X	X
SB-11, 1-2	Soil	1-2			X	X
SB-12, 0-1	Soil	0-1			X	X
SB-12, 1-2	Soil	1-2			X	X
SB-13, 0-1	Soil	0-1			X	X
SB-13, 1-2	Soil	1-2			X	X
SB-14, 0-1	Soil	0-1			X	X
SB-14, 1-2	Soil	1-2			X	X
TW-04 (SB-04)	Groundwater	9.7-19.7	X	X		

Notes:

- VOCs - Volatile Organic Compounds analyzed for the Target Compound List (TCL) and NYSDEC Commissioner Policy (CP-51) lists using United States Environmental Protection Agency (USEPA) method 8260
- SVOCs - Semi-Volatile Organic Compounds analyzed for CP-51 list using USEPA method 8270
- Metals were analyzed for Resource Conservation and Recovery Act (RCRA) list of metals using USEPA method 6010 or 7471
- Pesticides were analyzed using USEPA Method 8081
- Sample locations are depicted on Figure 2

The laboratory analytical reports are included as Appendix 2.

3.4 Deviations to Objective

Four (4) soil borings were converted into temporary shallow overburden groundwater monitoring wells (designated as TW-01 (SB-01), TW-02 (SB-08), TW-03 (SB-09) and TW-04 (SB-04). While groundwater sampling of each of these wells was planned, only one well, TW-04 (SB-04), produced sufficient groundwater for well development and groundwater sampling. As such, only one groundwater sample was collected for laboratory analysis.

Screening of shallow soil samples for lead was attempted utilizing a Delta handheld x-ray fluorescence (XRF) meter; however, LaBella encountered calibration issues with the XRF unit during numerous calibration attempts. Based on poor calibration results, XRF screening was not completed on shallow soils.

4.0 RESULTS OF PRELIMINARY PHASE II INVESTIGATION

4.1 Subsurface Conditions

Soils at the Site consisted generally of fine to medium brown/gray sands, some brown silt, little fine sub angular gravel. Urban fill material (i.e. brick, concrete, ash, coal, etc.) was not encountered during the work. Equipment refusal was encountered in seven (7) of the soil borings and consisted of weathered rock. Groundwater was encountered at approximately 15 ft bgs in TW-04 (SB-04).

4.2 Field Screening Results

All soil cores were continuously assessed by LaBella for evidence of impairment. No visual or olfactory evidence of impairment was identified within any of the soil borings advanced with the exception of SB-08 at 7.5 to 8 ft bgs. Black staining and petroleum odors were identified associated with these soils. PID readings of soils from SB-08 at 7.5 to 8 ft bgs were identified slightly above background conditions, at 0.4 ppm.

Evidence of impairment was not identified in any of the other soil borings or shallow soil borings during the work. PID readings collected from the soil borings are included in the test boring field logs in Appendix 1.

Screening of shallow soil samples for lead was attempted utilizing a Delta handheld XRF meter; however, LaBella encountered calibration issues with the XRF unit during numerous calibration attempts. Based on poor calibration results, XRF screening was not completed on shallow soils.

4.3 Laboratory Analytical Results

The laboratory analytical results have been compared to the following standards:

Soil

- **Unrestricted Use Soil Cleanup Objectives (SCOs)** - 6 New York Code Rules and Regulations (NYCRR) Part 375-6.8(a) Unrestricted Use SCOs
- **Restricted Residential Use SCO** - 6 NYCRR Part 375-6.8(b) Restricted Use SCOs for a Residential Site

Based on the future use of the Site for multi-family housing, the Restricted Residential Use SCOs are the most appropriate comparison criteria for the Site.

Groundwater

- **TOGS 1.1.1** - NYSDEC document titled "Division of Water Technical and Operational Guidance Series 1.1.1; Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations" dated June 1998 as amended with April 2000 and June 2004 addendum tables

The results are summarized on the following attached tables:

- Table 1 – Summary of Volatile Organic Compounds in Soil Borings
- Table 2 – Summary of Semi-Volatile Organic Compounds in Soil Borings
- Table 3 – Summary of Metals in Soil Borings
- Table 4 – Summary of Pesticides in Soil Borings
- Table 5 – Summary of Metals in Shallow Soil Borings
- Table 6 – Summary of Pesticides in Shallow Soil Borings
- Table 7 - Summary of Volatile Organic Compounds in Groundwater
- Table 8 - Summary of Semi-Volatile Organic Compounds in Groundwater

4.3.1 Soil Boring Sample Results

VOCs:
A total of five (5) soil samples were analyzed for VOCs. VOCs were detected in four (4) of the five (5) soil samples at concentrations above laboratory method detection limits (MDLs); however, the concentrations detected do not exceed Unrestricted Use SCOs.

SVOCs:
A total of four (4) soil samples were analyzed for SVOCs. Numerous SVOCs were detected in one (1) soil sample (SB-08, 7.5-10 ft bgs) at concentrations above laboratory MDLs. Of these detections, seven (7) SVOC compounds were identified exceeding Unrestricted and Restricted Residential Use SCOs.

Metals:
A total of four (4) soil samples were analyzed for RCRA Metals. Metals were detected in all four (4) soil samples at concentrations above laboratory MDLs. Of these detections, only lead was identified above the Unrestricted Use SCO in one (1) soil boring (SB-08, 7.5-10 ft bgs). However, the concentration is below the Restricted Residential SCO for this compound.

Pesticides:
A total of two (2) soil samples were analyzed for Pesticides. Pesticides were detected in one (1) soil sample (SB-08, 7.5-10 ft bgs) at concentrations above laboratory MDLs. Of these detections, two (2) pesticides (4,4'-DDT and 4,4'-DDD) were identified exceeding their respective Unrestricted Use SCOs. Concentrations did not exceed Restricted Residential SCOs.

4.3.2 Shallow Soil Boring Sample Results

Metals:
A total of eight (8) shallow soil samples were analyzed for RCRA Metals. Metals were detected in all eight (8) shallow soil samples at concentrations above laboratory MDLs. Of these detections, lead was identified above Unrestricted Use SCOs in SB-11, 1-2 ft bgs; SB-12, 1-2 ft bgs; SB-14, 0-1 ft bgs; and, SB-14, 1-2 ft bgs. However, these concentrations are below Restricted Residential SCOs.

Pesticides:
A total of eight (8) shallow soil samples were analyzed for Pesticides. Pesticides were detected in all eight (8) soil samples at concentrations above laboratory MDLs. Of these detections, pesticides were identified exceeding Unrestricted Use SCOs in seven (7) of the shallow soil samples. However, these concentrations are below Restricted Residential SCOs.

4.3.3 Groundwater Sample Results

VOCs:
One (1) groundwater sample was analyzed for VOCs (TW-04). Two VOCs were detected in the groundwater sample at concentrations above laboratory MDLs; however, the concentrations detected do not exceed the TOGS 1.1.1 groundwater standards.

SVOCs:
One (1) groundwater sample was analyzed for SVOCs (TW-04). Fifteen SVOCs were detected in the groundwater sample at concentrations above laboratory MDLs. Of these detections, six (6) SVOCs were identified exceeding TOGS 1.1.1 groundwater standards. It should be noted that elevated turbidity was measured in this well during groundwater sampling; as such, the elevated concentrations of SVOCs could be the result of sediment in the samples and not representative of dissolved concentrations in groundwater.

5.0 CONCLUSIONS AND RECOMMENDATIONS

5.1 Conclusions

LaBella was retained by ADC to conduct a Preliminary Phase II ESA at the property located at 800-802 South Wilbur Avenue, Syracuse, New York. The Preliminary Phase II ESA consisted of the advancement of fourteen (14) soil borings, installation of temporary groundwater monitoring wells and laboratory analysis of thirteen (13) soil and one (1) groundwater sample. This Preliminary Phase II ESA was performed to evaluate whether the RECs identified in the Phase I ESA report by LaBella dated October 31, 2022, including review of other previous environmental reports, have impacted the subsurface soil and groundwater at the Site and to evaluate current soil and groundwater conditions for use in planning for redevelopment of the Site. Investigation was limited to the approximately 21.5-acre area depicted on Figure 2 and based on deteriorated building conditions, did not include sampling within building footprints.

- No visual or olfactory evidence of environmental impairment was identified within any of the soil borings advanced with the exception of SB-08 at 7.5 to 8 ft bgs. Black staining and petroleum odors were identified associated with these soils. PID readings of soils from SB-08 at 7.5 to 8 ft bgs were identified slightly above background conditions, at 0.4 ppm.

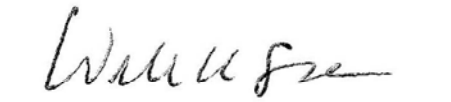
- VOCs were detected in soil borings at concentrations above laboratory MDLs; however, the concentrations detected do not exceed Unrestricted Use SCOs. Select metals and pesticides were identified in soil samples above Unrestricted Use SCOs; however, these compounds were not identified above Restricted Residential SCOs. Restricted Residential SCOs are the most appropriate comparison criteria based on the planned future use of the Site for multi-family housing.

- Numerous SVOCs were detected in one (1) soil sample (SB-08, 7.5-10 ft bgs) at concentrations exceeding Unrestricted and Restricted Residential SCOs. The SVOCs detected are polyaromatic hydrocarbons (PAHs) and are typically associated with asphalt pavement or partially combusted fossil fuels. Lead and pesticides were also identified above Unrestricted Use SCOs in this soil sample, but below Restricted Residential SCOs. As mentioned above, black staining and petroleum odors were noted in a portion of this sample interval during the investigation. While a temporary groundwater monitoring well was installed at this location, the well did not produce sufficient groundwater for development and sampling. Based on the preliminary nature of this assessment, the nature and extent of the impacts in SB-08 have not been delineated.

- SVOCs were detected in one (1) groundwater sample slightly exceeding TOGS 1.1.1 groundwater standards. However, based on elevated turbidity readings collected at the time of sampling, these results may not be representative of dissolved concentrations in groundwater. The Site is located in an urban area and groundwater is not a source of drinking water. Drinking water is supplied from a municipal source.

As noted in Section 1.0, the 21.5-acre Site extent was based on a prior conceptual redevelopment plan. However, LaBella understands that the redevelopment plan is being modified and may propose redevelopment in areas not included as part of this Preliminary Phase II ESA or the Phase I ESA dated October 31, 2022. Based on this information, additional subsurface soil and groundwater investigation should be completed to determine soil and groundwater conditions in these areas.

5.2 Recommendations



Based on the Conclusions above, the following is recommended for the Site:

- Delineation of soil and groundwater should be completed in the vicinity of SB-08 to determine if additional subsurface impacts are present in this area which could warrant remediation.
- If the revised redevelopment plans expand the Site boundary beyond the current extent, additional investigation may be recommended. Based on the historical presence of underground storage tanks and a historical boiler house which was demolished in the early 1970s, additional investigation may include a geophysical survey to assess for orphan USTs (primarily near the historical boiler house) and additional soil and groundwater sampling.

A copy of all information collected during this assessment, including maps, notes, analytical data and other material will be kept on file at the offices of LaBella Associates, D.P.C. This information is available upon request.

NOTES:
All values displayed in milligrams per kilograms (mg/kg) or parts per million (ppm)
"<" - Indicates compound was not detected above the indicated laboratory method detection limit (MDL).
Bold font indicates the concentration exceeds the method detection limit (MDL).
Underlined font indicates that the compound was detected at a concentration above its respective NYCRR Part 375-6.8(a) Unrestricted Use Soil Cleanup Objective (SCO)
Red font indicates that the compound was detected at a concentration above its respective NYCRR Part 375-6.8(b) Restricted Residential Use SCO
Pesticides analyzed by USEPA Method 8081
NL indicates Not Listed
J indicates an estimated value
I - The lower value for the two columns has been reported due to obvious interference.
P - The RPD between the results for the two columns exceeds the method-specified criteria.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics

L2267177-05D: The sample has elevated detection limits due to the dilution required by the sample matrix.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	SYRACUSE DEVELOPMENT CENTER	**Lab Number:**	L2267177
Project Number:	2224176	**Report Date:**	12/14/22

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	SYRACUSE DEVELOPMENT CENTER	**Lab Number:**	L2267177
Project Number:	2224176	**Report Date:**	12/14/22

Data Qualifiers

Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water
SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH: Ammonia-N and Kjeldahl-N, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **EPA 351.1, SM4500NO3-F, EPA 353.2**: Nitrate-N, **SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D, EPA 300: Chloride, Sulfate, Nitrate.**
EPA 624.1: Volatile Halocarbons & Aromatics,

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Caitlin Walukevich

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	SYRACUSE DEVELOPMENT CENTER	**Lab Number:**	L2267178
Project Number:	2224176	**Report Date:**	12/14/22

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	SYRACUSE DEVELOPMENT CENTER	**Lab Number:**	L2267178
Project Number:	2224176	**Report Date:**	12/14/22

Data Qualifiers

Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

1.0 INTRODUCTION

LaBella Associates, D.P.C. ("LaBella") was retained by Albanese Development Corporation (ADC/Client) to conduct a Supplemental Phase II Environmental Site Assessment (ESA) at the property located at 800-802 South Wilbur Avenue, Syracuse, New York, hereinafter referred to as the "Site" (see Figure 1). This Supplemental Phase II ESA has been performed in conformance with the scope and limitations of ASTM Practice E 1903-19.

The overall property addressed as 800-802 South Wilbur Avenue and historically utilized as the Syracuse Developmental Center comprises an approximately 47.8-acre area. However, for the purposes of this Supplemental Phase II ESA, the Site extent was limited to the Site boundaries as depicted on attached Figure 2. This area was selected based on a prior conceptual redevelopment plan.

1.1 Objective

The objectives of the Supplemental Phase II ESA were to:

- Evaluate subsurface soil and groundwater in the vicinity of redevelopment areas based on revised plans and not included in the Preliminary Phase II ESA;
- Assess subsurface impacts previously identified in the vicinity of SB-08; and,
- Install additional soil borings in the vicinity of the former oil house and carpentry shop.

1.2 Special Terms & Conditions

The findings of this Supplemental Phase II ESA are based on the scope of work and project objectives as stated in LaBella Proposal number P2301675 dated February 22, 2023.

1.3 Limitations & Exceptions

Work associated with this Supplemental Phase II ESA was performed in accordance with generally accepted environmental engineering and environmental contracting practices for this region. LaBella Associates, D.P.C., makes no other warranty or representation, either expressed or implied, nor is one intended to be included as part of its services, proposals, contracts or reports.

LaBella cannot provide guarantees, certifications or warranties that the property is or is not free of environmental impairment or other regulated solid wastes. The Client shall be aware that the data and representative samples from any given soil sampling point or monitoring well may represent conditions that apply only at that particular location, and such conditions may not necessarily apply to the general Site as a whole.

Due to the poor condition of the building interior and redevelopment plans to include demolition of the existing structure, sampling was not conducted inside the building as part of this Supplemental Phase II ESA.

2.0 BACKGROUND

2.1 Site Description & Features

The overall redevelopment project comprises a 47.8-acre area and is planned to be redeveloped for residential and manufacturing purposes. The Site consists of the approximately 29-acre area that is planned to be redeveloped with apartment buildings and townhomes, as depicted on Figure 2. The area immediately south and southwest of the property boundary is part of the greater property but not within the current Site footprint; as such, investigation was not conducted in this area as part of this Supplemental Phase II ESA.

The existing structure at the Site includes portions of a greater four-story, 628,808 square foot institutional building constructed between 1970 and 1971 that has most recently been used as offices and storage; this structure has been vacant for approximately 10 years.

2.2 Physical Setting

The Site is located in the City of Syracuse within a predominantly urban area; surrounding properties are utilized for residential, commercial, and educational purposes.

2.3 Adjacent Property Use

The Site is bordered by the following properties:

Direction	Land Use
North	Commercial (Arc of Onondaga - 600 South Wilbur Avenue) Commercial (Rosamond Gifford Zoo - 1 Conservation Place)
East	Residences (601-627 South Wilbur Avenue)
South	Southern portion of 800-802 Wilbur Avenue
West	Vacant commercial (410 Grand Avenue)

2.4 Site History & Land Use

Based on the historical records reviewed, the following information was obtained related to the Site:

- Between at least 1892 and 1967 the Site was developed with various former structures and utilized as a psychiatric facility including an oil house, paint/printing shop, greenhouses, and carpentry shop, which were present at various times between at least 1911 and 1967.

- From 1970-1971 through current the Site was developed with the current Site Building and utilized as a psychiatric facility through the early 2000s with later uses consisting of office space and storage. The Site has been vacant for approximately 10 years.

2.5 Summary of Preliminary Phase II ESA

LaBella recently completed a Preliminary Phase II ESA, draft report dated January 16, 2023, at the Site which included the advancement of fourteen (14) soil borings, installation of temporary groundwater monitoring wells and laboratory analysis of thirteen (13) soil and one (1) groundwater sample. This Preliminary Phase II ESA was performed to evaluate whether the RECs identified above had impacted the subsurface soil and groundwater at the Site and to evaluate current soil and

groundwater conditions for use in planning for redevelopment of the Site. The investigation was limited to an approximately 21.5-acre area from development plans at that the time and based on deteriorated building conditions, did not include sampling within building footprints. The results of the Preliminary Phase II ESA are summarized below.

- No visual or olfactory evidence of environmental impairment was identified within any of the soil borings advanced with the exception of SB-08 at 7.5 to 8 ft bgs. Black staining and petroleum odors were identified associated with these soils. PID readings of soils from SB-08 at 7.5 to 8 ft bgs were identified slightly above background conditions, at 0.4 ppm.

- VOCs were detected in soil borings at concentrations above laboratory MDLs; however, the concentrations detected do not exceed Unrestricted Use SCOs. Select metals and pesticides were identified in soil samples above Unrestricted Use SCOs; however, these compounds were not identified above Restricted Residential Use SCOs. Restricted Residential Use SCOs are the most appropriate comparison criteria based on the planned future use of the Site for multi-family housing.

- Numerous SVOCs were detected in one (1) soil sample (SB-08, 7.5-10 ft bgs) at concentrations exceeding Unrestricted and Restricted Residential Use SCOs. The SVOCs detected are polyaromatic hydrocarbons (PAHs) and are typically associated with asphalt pavement or partially combusted fossil fuels. Lead and pesticides were also identified above Unrestricted Use SCOs in this soil sample, but below Restricted Residential Use SCOs. As mentioned above, black staining and petroleum odors were noted in a portion of this sample interval during the investigation. While a temporary groundwater monitoring well was installed at this location, the well did not produce sufficient groundwater for development and sampling. Based on the preliminary nature of this assessment, the nature and extent of the impacts in SB-08 have not been delineated.

- SVOCs were detected in one (1) groundwater sample slightly exceeding TOGS 1.1.1 groundwater standards. However, based on elevated turbidity readings collected at the time of sampling, these results may not be representative of dissolved concentrations in groundwater. The Site is located in an urban area and groundwater is not a source of drinking water. Drinking water is supplied from a municipal source.

Based on the results of the Preliminary Phase II ESA, the following was recommended for the Site:

- Delineation of soil and groundwater should be completed in the vicinity of SB-08 to determine if additional subsurface impacts are present in this area which could warrant remediation.

- If the revised redevelopment plans expand the Site boundary beyond the current extent, additional investigation may be recommended.

ADC recently provided LaBella with revised redevelopment plans for the Site. These revised plans include a slight increase in land area and additional residential structures (apartment buildings and townhouses). Based on the revised redevelopment plans, and conversations with ADC, the purpose of the Supplemental Phase II ESA is to evaluate subsurface soil and groundwater in the vicinity of redevelopment areas based on revised plans and not included in the Preliminary Phase II ESA. In addition, to delineate subsurface impacts identified in the vicinity of SB-08 and install additional soil borings in the vicinity of the former oil house and carpentry shop.

3.0 FIELD INVESTIGATION

The following Scope of Work was performed:

3.1 Soil Boring Installation and Sampling

Prior to the initiation of subsurface work, an underground utility stake-out via *Dig Safely New York* was completed at the Site (ticket number 02223-001-056) to locate utilities in the areas where the subsurface assessment would take place.

In addition, LaBella retained the services of a geophysical survey sub-consultant to perform nonintrusive subsurface locating using a magnetometer and ground penetrating radar (GPR) capable of detecting and delineating metallic and buried objects in the subsurface. The geophysical work was conducted at the Site on February 27, 2023, by On The Mark Utility Locating Services, Inc. (OTM) under LaBella supervision. The work was performed specifically to clear all proposed soil boring and temporary well locations planned for sampling of any anomalies, utilities or buried objects.

The equipment utilized by OTM during the work included Pipehorn 800HL (Radio Frequency), Radiodetection CAT4 (Radio Frequency) and a Mala Ground Penetrating Radar (GPR) unit.

It should be noted that no geophysical anomalies or metallic or buried objects were identified in the proposed soil boring and temporary well locations utilized for sampling.

3.1.1 Soil Borings

A total of twenty (20) soil borings were advanced at the Site on March 1 and March 2, 2023, designated SB-15 through SB-34, under supervision of LaBella personnel. Soil borings were advanced at the Site to depths ranging from approximately 5 to 15-feet (ft) below ground surface (bgs) into the overburden with a track-mounted Geoprobe® Systems Model 6712DT direct-push sampling system. The use of direct-push technology allows for rapid sampling, observation, and characterization of overburden soils. The Geoprobe utilizes a 5-ft MacroCore® sampler with disposable polyethylene sleeves. Soil cores are retrieved in 5-ft sections and are cut from the polyethylene sleeves for observation and sampling. The MacroCore® sampler was decontaminated between boring locations using an Alconox® and potable water solution followed by a potable water rinse. Soil boring locations are depicted on Figure 2.

Soil samples were collected continuously from the ground surface to the bottom of each boring. Soil samples were visually and physically examined by LaBella personnel and observations made of the general lithology, visible layering, evidence of nonnative fill/historic fill materials, indications of chemical or other staining, odors, and other distinctive features. Soils from soil borings were field screened for the presence of Volatile Organic Compounds (VOCs) using a PID equipped with a 10.6 electronvolt (eV) lamp. Positive indications from any of these screening methods are collectively

referred to as “evidence of impairment”. PID data and observations from each boring are included on the soil boring logs presented in Appendix 1.

Samples were selected from the borings for laboratory analysis based upon depth, apparent depth of the top of the overburden groundwater table, field screening, and PID readings to address the potential environmental concerns identified at the Site. The soil samples submitted for laboratory analysis are listed in Section 3.3 and are summarized in Section 4.3. Investigation locations were located with a global positioning system.

3.2 Groundwater Monitoring Well Installation and Sampling

One (1) soil boring was converted into a temporary shallow overburden groundwater monitoring well (designated as TW-05 (SB-32). It should be noted that while up to five (5) temporary shallow overburden groundwater monitoring wells were planned, only one soil boring, SB-32, showed evidence of groundwater.

The well was constructed with 10-ft of 0.010-slot well screen of 1-inch inner diameter Schedule 40 polyvinyl chloride (PVC) screen attached to solid riser piping of the same material to complete the well. The well was installed as an overburden well that was intended to intersect the top of the overburden groundwater table. The annulus was sand packed with quartz sand to a nominal depth of 1-ft above the screen section and a bentonite seal was placed above the sand to near the ground surface. The groundwater monitoring well construction logs are included in Appendix 1.

In addition, the three (3) groundwater monitoring wells installed during the Preliminary Phase II ESA which did not produce groundwater initially, TW-01 (SB-01), TW-02 (SB-08) and TW-03 (SB-09), were reassessed on March 2, 2023 for evidence of groundwater. Evidence of groundwater in these wells was not identified. As such, these wells could not be developed or sampled.

On March 2, 2023, a static water level (SWL) was collected from TW-05 (SB-32) prior to development. The SWL was identified at 4.3 ft bgs. The well was developed using a peristaltic pump until three well volumes were removed. A peristaltic pump was used to collect a groundwater sample from TW-05 (SB-32) to limit turbidity. Immediately prior to sampling, a turbidity reading was collected in the field utilizing a Lamotte 2020we turbidity meter. Turbidity of groundwater in TW-05 (SB-32) was 141 NTU prior to sampling. Well development and turbidity are documented on the well construction logs.

The groundwater sample was submitted for laboratory analysis listed in Section 3.3 and is summarized in Section 4.3. Investigation locations were located with a global positioning system.

3.3 Laboratory Analytical Program

Samples selected for analysis were placed directly into laboratory-supplied containers, preserved as appropriate in a cooler, submitted under chain-of-custody protocol to Alpha Analytical in Westborough, Massachusetts, which is a New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Program (ELAP) certified laboratory. A laboratory courier was utilized to transport the samples to the lab.

LaBella submitted the following samples for laboratory analysis.

Sample ID	Sample Matrix	Sample Depth or Well Screen Interval (ft bgs)	Laboratory Analysis			
			VOCs	SVOCs	Metals	Pesticides
SB-15, 2.5-5.0	Soil	2.5-5.0	X	X	X	X
SB-16, 7.5-10.0	Soil	7.5-10	X	X	X	X
SB-19, 5.0-7.5	Soil	5.0-7.5		X		
SB-20, 5.0-7.5	Soil	5.0-7.5		X		
SB-25, 7.5-10.0	Soil	7.5-10.0	X	X		
SB-27, 2.5-5.0	Soil	2.5-5.0	X	X	X	
SB-31, 10.0-12.5	Soil	10.0-12.5	X	X	X	
SB-33, 5.0-7.5	Soil	5.0-7.5		X		
TW-05 (SB-32)	Groundwater	5.0-15.0	X	X		

Notes:

- VOCs - Volatile Organic Compounds analyzed for the Target Compound List (TCL) and NYSDEC Commissioner Policy (CP-51) lists using United States Environmental Protection Agency (USEPA) method 8260
- SVOCs - Semi-Volatile Organic Compounds analyzed for CP-51 list using USEPA method 8270
- Metals were analyzed for Resource Conservation and Recovery Act (RCRA) list of metals using USEPA method 6010 or 7471
- Pesticides were analyzed using USEPA Method 8081
- Sample locations are depicted on Figure 2

The laboratory analytical reports are included as Appendix 2.

3.4 Deviations to Objective

One (1) soil boring was converted into a temporary shallow overburden groundwater monitoring well (designated as TW-05 (SB-32). It should be noted that while up to five (5) temporary shallow overburden groundwater monitoring wells were planned, only one soil boring, SB-32, showed sufficient evidence of groundwater for well development and groundwater sampling purposes. As such, only one groundwater sample was collected for laboratory analysis.

4.0 RESULTS OF SUPPLEMENTAL PHASE II INVESTIGATION

4.1 Subsurface Conditions

Soils at the Site consisted generally of fine to medium brown/gray sands, some brown silt, little fine sub angular gravel. Urban fill material (i.e. brick, concrete, ash, coal, etc.) was not encountered during the work. Equipment refusal was encountered in eighteen (18) of the twenty (20) soil borings and consisted of weathered rock. Groundwater was encountered at approximately 4.3 ft bgs in TW-05 (SB-32).

4.2 Field Screening Results

All soil cores were continuously assessed by LaBella for evidence of impairment. No visual or olfactory evidence of impairment was identified within any of the soil borings advanced with the exception of SB-15 at 2.5-5 ft bgs, SB-16 at 7.5-10 ft bgs and SB-27 at 2.5-5 ft bgs. Black soils/staining was identified associated with these soils. In addition, slight petroleum odors were identified associated with soils at SB-15 at 2.5-5 ft bgs. PID readings were not identified above background condition in any of the soil samples.

Evidence of impairment was not identified in any of the other soil borings during the work. PID readings collected from the soil borings are included in the test boring field logs in Appendix 1.

4.3 Laboratory Analytical Results

The laboratory analytical results have been compared to the following standards:

Soil

- **Unrestricted Use Soil Cleanup Objectives (SCOs)** - 6 New York Code Rules and Regulations (NYCRR) Part 375-6.8(a) Unrestricted Use SCOs
- **Restricted Residential Use SCO** - 6 NYCRR Part 375-6.8(b) Restricted Use SCOs for a Residential Site

Based on the future use of the Site for multi-family housing, the Restricted Residential Use SCOs are the most appropriate comparison criteria for the Site.

Groundwater

- **TOGS 1.1.1** - NYSDEC document titled "Division of Water Technical and Operational Guidance Series 1.1.1; Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations" dated June 1998 as amended with April 2000 and June 2004 addendum tables

The results are summarized on the following attached tables:

- Table 1 – Summary of Volatile Organic Compounds in Soil Borings
- Table 2 – Summary of Semi-Volatile Organic Compounds in Soil Borings
- Table 3 – Summary of Metals in Soil Borings
- Table 4 – Summary of Pesticides in Soil Borings
- Table 5 - Summary of Volatile Organic Compounds in Groundwater
- Table 6 - Summary of Semi-Volatile Organic Compounds in Groundwater

4.3.1 Soil Boring Sample Results

VOCs:
A total of five (5) soil samples were analyzed for VOCs. VOCs were detected in two (2) of the five (5) soil samples at concentrations above laboratory method detection limits (MDLs); however, the concentrations detected do not exceed Unrestricted Use SCOs.

SVOCs:
A total of eight (8) soil samples were analyzed for SVOCs. Numerous SVOCs were detected in four (4) of the eight (8) soil samples, SB-15, SB-16, SB-27 and SB-33, at concentrations above laboratory MDLs. Of these detections, four (4) SVOC compounds were identified exceeding Unrestricted Use and Restricted Residential Use SCOs in SB-33, 5.0-7.5 ft bgs. In addition, one (1) SVOC compound was identified exceeding Unrestricted Use SCOs in SB-33, 5.0-7.5 ft bgs.

Metals:
A total of four (4) soil samples were analyzed for RCRA Metals. Metals were detected in all four (4) soil samples at concentrations above laboratory MDLs. Of these detections, mercury was identified above the Unrestricted Use SCO in one (1) soil boring (SB-15, 2.5-5 ft bgs). In addition, lead was identified above the Unrestricted Use SCO in one (1) soil boring (SB-16, 7.5-10 ft bgs). However, both concentrations were below the Restricted Residential SCO for these metals.

Pesticides:
A total of two (2) soil samples were analyzed for Pesticides. Pesticides were detected in one (1) soil sample (SB-15, 2.5-5 ft bgs) at concentrations above laboratory MDLs; however, the concentration detected does not exceed the Unrestricted Use SCO.

4.3.2 Groundwater Sample Results

VOCs:
One (1) groundwater sample was analyzed for VOCs (TW-05). No VOCs were detected in the groundwater sample at concentrations above laboratory MDLs.

SVOCs:
One (1) groundwater sample was analyzed for SVOCs (TW-05). Eight (8) SVOCs were detected in the groundwater sample at concentrations above laboratory MDLs. Of these detections, five (5) SVOCs were identified exceeding TOGS 1.1.1 groundwater standards. It should be noted that elevated turbidity was measured in this well during groundwater sampling; as such, the elevated concentrations of SVOCs could be the result of sediment in the samples and not representative of dissolved concentrations in groundwater.

5.0 CONCLUSIONS AND RECOMMENDATIONS

5.1 Conclusions

LaBella was retained by ADC to conduct a Supplemental Phase II ESA at the property located at 800-802 South Wilbur Avenue, Syracuse, New York. The Supplemental Phase II ESA consisted of the advancement of twenty (20) soil borings, installation of a temporary groundwater monitoring well and laboratory analysis of eight (8) soil and one (1) groundwater sample.

- No visual or olfactory evidence of impairment was identified within any of the soil borings advanced with the exception of SB-15 at 2.5-5 ft bgs, SB-16 at 7.5-10 ft bgs and SB-27 at 2.5-5 ft bgs. Black soils/staining was identified associated with these soils. In addition, slight petroleum odors were identified associated with soils at SB-15 at 2.5-5 ft bgs. PID readings were not identified above background condition in any of the above soil samples. Evidence of impairment or urban fill (i.e., ash or cinders) were not identified in any of the other soil borings during the work.

- Three (3) VOCs and one (1) pesticide were detected in soil borings at concentrations above laboratory MDLs; however, the concentrations detected do not exceed Unrestricted Use SCOs. Metals including mercury and lead were identified in soil samples above Unrestricted Use SCOs at SB-15 at 2.5-5 ft bgs and SB-16 at 7.5-10 ft, respectively; however, these compounds were not identified above Restricted Residential SCOs. Restricted Residential SCOs are the most appropriate comparison criteria based on the planned future use of the Site for multi-family housing.

- SVOCs were detected in one (1) soil sample (SB-33, 5.0-7.5 ft bgs) at concentrations exceeding Unrestricted and Restricted Residential SCOs. The SVOCs detected are polyaromatic hydrocarbons (PAHs) and are typically associated with asphalt pavement or partially combusted fossil fuels. Note that SVOCs were also detected above Restricted Residential SCOs in sample SB-08 collected during the Preliminary Phase II ESA in January 2023.

- SVOCs were detected in one (1) groundwater sample, TW-05 (SB-32) slightly exceeding TOGS 1.1.1 groundwater standards. However, based on elevated turbidity readings collected at the time of sampling, these results may not be representative of dissolved concentrations in groundwater. The Site is located in an urban area and groundwater is not a source of drinking water. Drinking water is supplied from a municipal source.

Based on data from the January 2023 Preliminary Phase II ESA and this Supplemental Phase II ESA, select metals, pesticides and SVOCs have been identified sporadically throughout the Site in soil at concentration exceeding Unrestricted Use SCOs. In addition, SVOCs have been detected in soil at concentrations exceeding Restricted Residential Use SCOs and in groundwater at concentrations exceeding TOGS 1.1.1 groundwater standards; however, based on the nature of these compounds, the elevated concentrations in groundwater are likely attributed to high turbidity and may not be representative of dissolved concentrations.

The heavy metal and pesticide impacts are generally limited to shallow soils and may be the result of atmospheric deposition and/or historical operations at the property. The SVOC impacts are generally deeper and may be the result of historical filling.

5.2 Recommendations

Based on the sporadic nature of the soil impacts discussed in Section 5.1, LaBella recommends completing one of the two following approaches as part of redevelopment.

Option 1: Remediation

This approach involves excavation and off-site disposal of SVOC impacts above Restricted Residential SCOs. The impacts identified are sporadic and appear to be the result of historical filling; as such, additional areas of similar impacts could be encountered during future earthwork. For this reason, Option 1 would include a design phase investigation to provide a more comprehensive understanding of the subsurface in the areas of planned earthwork during redevelopment. Laboratory analysis associated with the design phase investigation would be limited to SVOCs unless additional impacts are observed in the field.

The areas of known impacts above Restricted Residential SCOs and any additional areas identified during the design phase investigation would be excavated until confirmatory soil samples indicate contamination has been removed. Excavated material would be transported to a NYCRR Part 360 landfill for disposal.

Option 2: Management During Construction

Based on the potential for the identified impacts to be widely distributed at the Site and the relatively stable nature of these compounds (i.e., generally don't leach to groundwater and don't volatilize), Option 2 would not involve active remediation or further investigation. Rather, an Environmental Management Plan (EMP) would be drafted to provide procedures for the identification, management and proper disposal of any impacted materials which could be encountered during construction. The EMP would include implementation of a Community Air Monitoring Program (CAMP) and environmental oversight during earthwork and guidance for the segregation of excavated materials.

Option 2 could result in less overall cost to the project while providing more comprehensive exposure prevention measures during earthwork and as part of the end use of the Site.

A copy of all information collected during this assessment, including maps, notes, analytical data and other material will be kept on file at the offices of LaBella Associates, D.P.C. This information is available upon request.

All values displayed in micrograms per liter (ug/L) or parts per billion (ppb)

"<" - Indicates compound was not detected above the indicated laboratory method detection limit (MDL).

Yellow highlight indicates that the compound was detected at a concentration above its respective 6 NYCRR Part 703 Groundwater Quality Standard or Technical and Operational Guidance Series (TOGS 1.1.1) Guidance Value

* indicates no Part 703 Standard, TOGS 1.1.1 Guidance Value is listed

VOCs analyzed by USEPA Method 8260

NL Indicates Not Listed

BORING LOG

Boring No.	SB-15
Sheet	1 of 1
Project No.:	2224176.1
CHKD BY:	
Start Date:	3/1/2023
Finish Date:	3/1/2023

Project Name:	Phase II Environmental Site Assessment
Location:	800 South Wilbur Avenue, Syracuse New York
Client:	Albanese Development Corporation
Drilling Firm:	Benner Geoservices
Driller:	Cortelyou

Key:
- Geologic Strata Change
- Gradation Change Within Strat
- End of Boring or Overpacked

Drill Rig:	Geoprobe 6712DT	**Rock Core:**	NA
Casing:		**Time Start:**	
Sampler:	Macro-Core - 5ft length, 2 inch diameter	**Time End:**	
Sampling Method:	Direct Push	**LaBella Rep.**	A. Steria
Hammer:		**Other**	

Boring Location:

Depth (ft.)	Recovery (In)	Sample Number/ID	Depth of Change (FT)	VISUAL-MANUAL MATERIAL DESCRIPTION trace (1 - 10%), little (11 - 20%), some (21 - 35%), and (36-50%); WOH = weight of hammer ; WOR = weight of rod	PID (parts per million)	COMMENTS (e.g., Native?, moisture, core run, RQD, % recovered)
1	47"	SB-15, 2.5-5.0		Brown Fine SAND, and Silt and Subangular Gravel	0.0	
2					0.0	
3					0.0	
4					0.0	
5			4'	Black Fine SAND, and Silt and Subangular Gravel	0.0	Slight odor
6	38"		5'	Brown Fine SAND and Silt	0.0	
7					0.0	
8					0.0	
9			8'	Red/Brown Fine SAND and Silt	0.0

GENERAL NOTES

1) STRATIFICATION LINES REPRESENT APPROXIMATE BOUNDARY BETWEEN SOIL TYPES, TRANSITIONS MAY BE GRADUAL.
2) WATER LEVEL READINGS HAVE BEEN MADE AT TIMES AND UNDER CONDITIONS STATED, FLUCTUATIONS OF GROUNDWATER

BGS = Below Ground Surface
NA = Not Applicable
BC = Blow counts per 6" sampler
NR = No Sample Recovery

and = 35 - 50%
some = 20 - 35%
little = 10 - 20%
trace = 1 - 10%

C = Coarse
M = Medium
F = Fine
VF = Very Fine

R = Rounded
A = Angular
SR = Subrounded
SA = Subangular

WELL CONSTRUCTION LOG

Well No.: TW-05

Project: Albanese Development Corporation Phase II ESA

Address: 800 South Wilbur Avenue

Town/City: Syracuse **State:** New York

Project No. 2224176.1 **County:** Onondaga

Installation Date(s): 3/1/2023

Drilling Method: Direct Push

Drilling Contractor: Benner GeoServices **Driller:** Cortelyou

Drill Rig: Geoprobe 6712DT

Drilling Fluid: NA

Datum: NA **Elevation:** NA ft

Well Development Information

Static Water Level: 4.3 **feet from top of casing.**

Fluid Lost During Drilling: NA **gallons**

Water Removed During Development: 2.5 **gallons**

Date(s) of Development: 3/2/2023

Purging Method: Paristaltic pump **Sampling Method:** Paristaltic pump

Well Cover Size/Tools Needed to Open: NA

Notes: ft = feet, bgs = below the ground surface

Located at SB-32. Turbidity reading = 141

Prepared By: A. Steria

APPENDIX 2

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Caitlin Walukevich

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	SYRACUSE DEVELOPMENT CENTER	**Lab Number:**	L2310842
Project Number:	2224176.1	**Report Date:**	03/06/23

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	SYRACUSE DEVELOPMENT CENTER	**Lab Number:**	L2310842
Project Number:	2224176.1	**Report Date:**	03/06/23

Data Qualifiers

Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics by SIM

The WG1750625-1 Method Blank, associated with L2311134-01, has a concentration above the reporting limit for Benzo(a)anthracene. Since the associated sample concentration is non-detect to the RL for this target analyte, no corrective action is required. Any results detected below the reporting limit are qualified with a "B".

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	SYRACUSE DEVELOPMENT CENTER	**Lab Number:**	L2311134
Project Number:	2224176.1	**Report Date:**	03/06/23

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	SYRACUSE DEVELOPMENT CENTER	**Lab Number:**	L2311134
Project Number:	2224176.1	**Report Date:**	03/06/23

Data Qualifiers

Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.

Re: Professional Engineering and Management Services
Post Demolition - Phase II Environmental Site Assessment
Portion of 800-802 South Wilbur Avenue, Syracuse, New York 13204
LaBella Project No. 2224176

Dear Mr. Dettling:

LaBella Associates, D.P.C. (LaBella) completed a Post Demolition Phase II Environmental Site Assessment (ESA) on behalf of Albanese Development Corporation (ADC/Client) for the property addressed as 800-802 South Wilbur Avenue, Syracuse, New York, hereinafter referred to as the "Site." The Site is depicted on attached Figure 1. The Phase II ESA was performed in conformance with the Scope of Work outlined in LaBella's Proposal (P2503574) dated May 14, 2025.

INTRODUCTION

LaBella completed a Phase I ESA, Preliminary Phase II ESA and Supplemental Phase II ESAs for the Site. Based on the prior environmental reports, soil samples from two (2) of thirty-four (34) soil borings identified concentrations of semi-volatile organic compounds (SVOCs) slightly above Restricted Residential Soil Cleanup Objectives (SCOs). As the buildings previously located at the Site have been recently demolished, LaBella was authorized to complete this Post Demolition Phase II ESA to further investigate soil and groundwater conditions in the area of the former building footprints.

FIELD INVESTIGATION

Prior to the initiation of subsurface work, an underground utility stake-out via *Dig Safely New York* was completed at the Site to locate utilities in the areas where the subsurface assessment would take place.

In addition, a geophysical survey was conducted in the areas of the planned soil boring locations at the Site, prior to soil boring installation. The geophysical work was conducted at the Site on July 1, 2025 by LaBella. The equipment utilized included a Ground Penetrating Radar (GPR) unit, GSSI Utility Scan DF combined with an ML-1 Magnetic Locater and RD8000 Pipe and Cable Locater. The work was performed specifically to clear all proposed soil boring and temporary well locations planned for sampling of any anomalies, utilities or buried objects.

It should be noted that no geophysical anomalies, metallic or buried objects were identified during the clearing of boring locations.

A total of six (6) soil borings were advanced at the Site on July 8, 2025, designated SB-35 through SB-40, under supervision of LaBella personnel. All soil borings were advanced at the Site to depths between 3 and 20-feet (ft) below ground surface (bgs) into the overburden with a track-mounted Geoprobe® Systems Model 6620 direct-push sampling system. The use of direct-push technology allows for rapid sampling, observation, and characterization of overburden soils. The Geoprobe utilizes a 5-ft MacroCore® sampler with disposable polyethylene sleeves. Soil cores are retrieved in 5-ft sections and are cut from polyethylene sleeves for observation and sampling. The MacroCore® sampler was decontaminated between boring locations using an Alconox® and potable water solution followed by a potable water rinse. Soil boring locations are depicted on attached Figure 2.

Soil samples were collected continuously from the ground surface to the bottom of each boring. Soil samples were visually and physically examined by LaBella personnel and observations made of the general lithology, visible layering, evidence of nonnative fill/urban fill materials, indications of chemical or other staining, odors, and other distinctive features. Soils from soil borings were field screened for the presence of Volatile Organic Compounds (VOCs) using a photoionization detector (PID) equipped with a 10.6 electronvolt (eV) lamp.

No visual or olfactory evidence of environmental impairment was identified within any of the soil borings advanced. In addition, significantly elevated PID) readings (i.e., greater than background conditions or 3.2 parts per million (ppm)) were not observed during the work. In addition, urban fill material was not identified in any of the soil borings. PID readings collected from the soil borings are included in the test boring field logs in Attachment 1.

One (1) soil boring was converted into a temporary shallow overburden groundwater monitoring well, designated as TW-06 (SB-36). While Labella planned to install an additional temporary well during the work, two additional attempts at SB-39 and SB-40, including well material installation, showed no evidence of groundwater at these locations.

Temporary well TW-06 was constructed with 10-ft of 0.010-slot well screen of 1-inch inner diameter Schedule 40 polyvinyl chloride (PVC) screen attached to solid riser piping of the same material to complete the well. The well was installed as an overburden well designed to intersect the top of the overburden groundwater table. The annulus was sand packed with quartz sand to a nominal depth of 1-ft above the screen section and a bentonite seal was placed above the sand to near the ground surface.

The table below provides additional information regarding groundwater monitoring well.

Sample ID	Soil Boring Location	Well Depth (ft bgs)	Well Screen Interval (ft bgs)	Depth to Water (ft bgs)
TW-06	SB-36	14.0	4-14	11.94

LaBella personnel developed TW-06 by removing three well volumes from the well using a dedicated bailer. Representative groundwater samples were also obtained using a dedicated bailer. It should be noted that the groundwater samples collected remained turbid after development.

A total of two (2) soil samples and one (1) groundwater sample was selected for laboratory analysis. The following table provides additional information regarding the soil borings and temporary wells and laboratory analysis.

Sample ID	Sample Matrix	PID (ppm)	Sample Depth or Well Screen Interval (ft bgs)	Laboratory Analysis		
				VOCs	SVOCs	RCRA Metals
SB-39, 10-12.5	Soil	2.2	10-12.5	X	X	X
SB-40, 10-12.5	Soil	3.2	10-12.5	X	X	X
TW-06 (SB-36)	Groundwater	--	4.8-14.8	X	X	--

Notes:

- VOCs - analyzed for the Target Compound List (TCL) and NYSDEC Commissioner Policy (CP-51) list using USEPA method 8260.
- SVOCs - Semi-Volatile Organic Compounds analyzed for CP-51 list using USEPA method 8270.
- Metals were analyzed for Resource Conservation and Recovery Act (RCRA) list of metals using USEPA method 6010 & 7471.
- Sample locations are depicted on Figure 2.

LABORATORY RESULTS

The laboratory analytical results have been compared to the following standards:

Soil

- **Unrestricted Use Soil Cleanup Objectives (SCOs)** - 6 New York Code Rules and Regulations (NYCRR) Part 375-6.8(a) Unrestricted Use SCOs
- **Restricted Residential Use SCO** - 6 NYCRR Part 375-6.8(b) Restricted Use SCOs for a Residential Site

Based on the future use of the Site for multi-family housing, the Restricted Residential Use SCOs are the most appropriate comparison criteria for the Site.

Groundwater

- **TOGS 1.1.1** - NYSDEC document titled "Division of Water Technical and Operational Guidance Series 1.1.1; Ambient Water Quality Standards (AWQS) and Guidance Values and Groundwater Effluent Limitations" dated June 1998 as amended with April 2000 and June 2004 addendum tables

The results are summarized on the following attached tables:

- Table 1 – Summary of Volatile Organic Compounds in Soil Borings
- Table 2 – Summary of Semi-Volatile Organic Compounds in Soil Borings
- Table 3 – Summary of Metals in Soil Borings
- Table 4 - Summary of Volatile Organic Compounds in Groundwater
- Table 5 - Summary of Semi-Volatile Organic Compounds in Groundwater

A copy of the laboratory report is included in Attachment 2. Below is a summary of the laboratory results.

SOIL BORINGS - VOCs:

Two (2) soil samples were analyzed for VOCs. No VOCs were detected above laboratory method detection limits (MDLs).

SOIL BORINGS - SVOCs:

Two (2) soil samples were analyzed for SVOCs. SVOCs were detected in soils at concentrations above laboratory MDLs in one (1) of the soil sample collected, SB-40 (10-12.5 ft bgs); however, the concentrations detected were all below Unrestricted Use SCOs.

SOIL BORINGS - Metals:

Two (2) soil samples were analyzed for metals. Metals were detected in both soil samples above laboratory MDLs; however, the concentrations detected were all below Unrestricted Use SCOs.

GROUNDWATER - VOCs:

One (1) groundwater sample was analyzed for VOCs. One VOC, acetone, was identified in the groundwater sample exceeding laboratory MDLs; however, the concentrations detected did not exceed AWQS Standards.

GROUNDWATER - SVOCs:

One (1) groundwater sample was analyzed for SVOCs. One SVOC, fluoranthene, was detected in the groundwater samples above laboratory MDLs; however, the concentration detected did not exceed AWQS Standards.

CONCLUSIONS & RECOMMENDATIONS

LaBella was retained by ADC to conduct a Post Demolition Phase II ESA at the property located at 800-802 South Wilbur Avenue, Syracuse, New York. The Post Demolition Phase II ESA consisted of the advancement of six (6) soil borings, installation of a temporary groundwater monitoring well and laboratory analysis of two (2) soil and one (1) groundwater sample, as summarized below.

- No field evidence of impact (i.e. elevated PID readings, odors, staining, sheen, etc.) was observed within any of the soil borings installed. In addition, urban fill material was not identified in any of the soil borings.
- No VOCs, SVOCs or metals were detected above Unrestricted Use SCOs in soil.
- No VOCs or SVOCs were detected above NYSDEC AWQS in groundwater.

Based on the results of this Post Demolition Phase II ESA, no field evidence of environmental impairment or urban fill material was observed within any of the soil borings or soil samples collected. In addition, laboratory results for soil or groundwater samples did not identify any VOCs, SVOCs or metals above applicable NYSDEC criteria.

Based on this information, additional soil and groundwater investigation and/or remediation does not appear warranted at the Site at this time.

Based on the result of the Preliminary Phase II ESA, Supplemental Phase II ESA and Post Demolition Phase II ESA the potential for encountering impacts appears very limited and not widely distributed throughout the Site. As such, future planned development and excavations may encounter limited impacts that may require excavated material to be handled/managed in accordance with NYSDEC Part 360 regulations as urban fill is considered by the NYSDEC to be a solid waste that cannot be treated as Construction and Demolition solid waste.

In addition, as previously identified in the Supplemental Phase II ESA, the development of an Environmental Management Plan (EMP) would be required. The EMP would outline procedures for the proper identification and management of known or unknown impacted materials which could be encountered during future earthwork and construction at the Site (e.g., utility maintenance, redevelopment, etc.).

The EMP would include implementation and environmental oversight on an as needed basis during earthwork as suspect materials or impacts are identified and include guidance for the segregation of excavated materials, if needed.

We appreciate the opportunity to serve your professional environmental engineering needs. If you have any questions, please do not hesitate to contact me at (315) 243-8441.

Respectfully submitted,

LABELLA ASSOCIATES, D.P.C

NOTES:

All values displayed in milligrams per kilograms (mg/kg) or parts per million (ppm)

"<" - Indicates compound was not detected above the indicated laboratory method detection limit (MDL).

Bold font indicates the concentration exceeds the method detection limit (MDL).

Underlined font indicates that the compound was detected at a concentration above its respective NYCRR Part 375-6.8(a) Unrestricted Use Soil Cleanup Objective (SCO)

Red font indicates that the compound was detected at a concentration above its respective NYCRR Part 375-6.8(b) Restricted Residential Use SCO

SVOCs analyzed by USEPA Method 8270

NL indicates Not Listed

J indicates an estimated value

Project Number:	2224176	**Report Date:**	07/28/25

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Pace Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments and solids are reported on a dry weight basis unless otherwise noted. Tissues are reported "as received" or on a wet weight basis, unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Pace's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Pace Project Manager and made arrangements for Pace to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L2542542-03: The sample was received in the proper acid-preserved containers. Upon analysis the pH was determined to be greater than 2 and the method required holding time was exceeded.

Total Metals

L2542542-01 and -02: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature:  Cristin Walker

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	POST-DEMOLITION PHASE II ESA	**Lab Number:**	L2542542
Project Number:	2224176	**Report Date:**	07/28/25

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	POST-DEMOLITION PHASE II ESA	**Lab Number:**	L2542542
Project Number:	2224176	**Report Date:**	07/28/25

Data Qualifiers

Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Pace Analytical Services performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Pace Analytical Services shall be to re-perform the work at it's own expense. In no event shall Pace Analytical Services be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Pace Analytical Services.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility – 8 Walkup Dr. Westborough, MA 01581
EPA 624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625.1: alpha-Terpineol
EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol, Azobenzene; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility – 320 Forbes Blvd. Mansfield, MA 02048
SM 2540D: TSS.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
MADEP-APH.
Nonpotable Water: EPA RSK-175 Dissolved Gases
Biological Tissue Matrix: EPA 3050B

Mansfield Facility – 120 Forbes Blvd. Mansfield, MA 02048
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Nonpotable Water: EPA RSK-175 Dissolved Gases

The following test method is not included in our New Jersey Secondary NELAP Scope of Accreditation:

Mansfield Facility – 320 Forbes Blvd. Mansfield, MA 02048
Determination of Selected Perfluorinated Alkyl Substances by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry Isotope Dilution (via Alpha SOP 23528)

The following analytes are included in our Massachusetts DEP Scope of Accreditation

EXECUTIVE SUMMARY

LaBella Associates, D.P.C. (LaBella) has been contracted by Albanese Development Corporation to perform a Phase I Environmental Site Assessment (ESA) report for the Former Syracuse Developmental Center property, 800-802 South Wilbur Avenue, Syracuse, Onondaga County, New York (hereinafter referred to as the "Subject Property").

This assessment was prepared according to the ASTM E1527-21 as a portion of the User's requirements in the All Appropriate Inquiries process and to satisfy the due diligence requirements set for Albanese Development Corporation.

The Subject Property is further described as follows:

Subject Property Name	Former Syracuse Developmental Center
Subject Property Address	800-802 South Wilbur Avenue, Syracuse, Onondaga County, New York
Subject Property Acreage (approximate)	21.5
Parcel ID(s)	Portions of 098.2-01-05.2 and 098.2-01-05.4
Current Owner	City of Syracuse
Current Subject Property Use/ Development	Post demolition vacant lot that was formerly developed with portions of a greater four-story, 628,808 square foot institutional building built between 1970 and 1971.
Public Thoroughfares and Access/Egress	South Wilbur Avenue to the east
Exterior Areas	Green areas, asphalt-paved drives, maintained landscape, and cleared land
Surrounding Area	Urban
Subject Property Utilities	
Electric Source	Public available
Natural Gas Source (if provided)	Public available
Potable Water Source	Public available
Sanitary Wastewater Disposal	Public available
Non-Sanitary Wastewater Disposal	N/A; no non-sanitary wastewater is generated

Based on LaBella's review of historical records, the history of the Subject Property is summarized as follows:

Time Period	Apparent Use/Development
Between at least 1892 and 1967	Developed with various former structures and utilized as a psychiatric facility. Former structures indicative of storage and/or use of hazardous materials and/or petroleum products that could pose a potential environmental concern included an oil house, paint/printing shop, greenhouses, and carpentry shop, which were present at various times between at least 1911 and 1967.
1970-1971 through present	Developed with one structure, utilized as a psychiatric facility through the early 2000s with later uses consisting of office space and storage. The Subject Property has been vacant for approximately 13 years. It should be noted that the structure was demolished in 2024 and the Subject Property consists of cleared land as of the date of this report.

Based on the results of this assessment, the following REC has been identified in connection with the Subject Property:

- Based on the records reviewed, an oil house, paint/printing shop, greenhouses, and carpentry shop were located on the Subject Property at various times between at least 1911 and 1967, prior to development of the Greater Syracuse Development Center, which was built in 1970-1971 and was recently demolished. It is likely that solvents, paints, cleaning chemicals, and other hazardous materials and/or petroleum products were utilized and stored at these areas and other areas of the Subject Property; material handling practices are unknown. Additionally, the Subject/Greater Property had been identified as a RRA Non-Generator and Manifest facility; wastes generated and/or transferred from the Subject Property have included PCBs, various metals, PCE, TCE, corrosive, ignitable, and reactive wastes, and spent non-halogenated solvents Several investigations have been conducted on the Subject Property between 2008 and 2025.

  As a result of the investigations, select metals, pesticides and SVOCs had been identified sporadically throughout the Subject Property in soil at concentrations exceeding Unrestricted Use Soil Cleanup Objectives (SCOs). SVOCs have been detected in soil at concentrations exceeding Restricted Residential Use SCOs and in groundwater at concentrations exceeding TOGS 1.1.1 groundwater standards; however, based on the nature of these compounds, the elevated concentrations in groundwater are likely attributed to high turbidity and may not be representative of dissolved concentrations. The heavy metal and pesticide impacts are generally limited to shallow soils and may be the result of atmospheric deposition and/or historical operations at the property. The SVOC impacts are generally deeper and may be the result of historical filling.

  As a result of the investigations, NYSDEC Spill #2304236 was opened for the Subject Property associated with the limited on-site contamination identified. The Spill has an active

status. As such, this represents a REC. Future planned development and excavations may encounter limited impacts that may require excavated material to be handled/managed in accordance with NYSDEC Part 360 regulations as urban fill is considered by the NYSDEC to be a solid waste that cannot be treated as Construction and Demolition solid waste.

LaBella recommends that an Environmental Management Plan be developed for the Subject Property to outline procedures for the proper identification and management of known or unknown impacted materials which could be encountered during future earthwork and construction at the Subject Property (e.g., utility maintenance, redevelopment, etc.). The Environmental Management Plan would include implementation and environmental oversight on an as needed basis during earthwork as suspect materials or impacts are identified and include guidance for the segregation of excavated materials, if needed.

Based on the results of this assessment, no CRECs, HRECs, de minimis conditions, or significant data gaps have been identified in connection with the Subject Property.

While not considered a REC, CREC, HREC, de minimis condition, or significant data gap, LaBella also notes the following:

- Previous reports identified limited staining related to chemical storage in the former Syracuse Developmental Center Building and also identified evidence (vent pipes) of an AST that was likely historically located within the former building. Additionally, areas of solid waste disposal, including household debris, was previously noted on-site. These items appear to have been addressed during recent demolition activities and are not considered and environmental concern for the Subject Property at this time.
- Pole-mounted transformers were observed along the eastern boundary of the Subject Property; no evidence of a release from this equipment was noted.
- Evidence of fill material (soil and gravel piles) associated with construction activities was observed on the eastern portion of the Subject Property. No leaks, stains, spills, or unusual odors were noted in the vicinity of the fill material at the time of the site visit.

Based on the findings of this assessment, no additional investigation is warranted at this time. However, LaBella recommends that an Environmental Management Plan be developed for the Subject Property to outline procedures for the proper identification and management of known or unknown impacted materials which could be encountered during future earthwork and construction at the Subject Property (e.g., utility maintenance, redevelopment, etc.).

The Environmental Management Plan would include implementation and environmental oversight on an as needed basis during earthwork as suspect materials or impacts are identified and include guidance for the segregation of excavated materials, if needed.

1.0 INTRODUCTION

LaBella has been contracted by Albanese Development Corporation to perform a Phase I Environmental Site Assessment report for the Former Syracuse Developmental Center property, 800-802 South Wilbur Avenue, Syracuse, Onondaga County, New York.

The findings of this report are based upon an assessment of the condition of the Subject Property within the Scope of Work and objective described below as of the date of the site observations and documentation review. This assessment was prepared according to the ASTM Standard Practices E1527-21 as a portion of the User's requirements in the All Appropriate Inquiries process and to satisfy the due diligence requirements set for Albanese Development Corporation. The information contained in this report is considered privileged and confidential and is intended solely for the use of the parties identified in Section 1.5.

1.1 Purpose

This investigation was requested to identify, to the extent feasible, RECs in connection with the Subject Property, including the identification of conditions indicative of releases and threatened releases of hazardous substances and petroleum products on, or in the vicinity of the Subject Property. This Phase I ESA report was conducted in conformance with the Scope and Limitations of ASTM Standard Practice E1527-21.

The performance of ASTM Standard Practices E1527-21 is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs and the potential liability for contamination to be present in connection with the Subject Property recognizing reasonable limits of time and cost. It is also intended to satisfy one of the requirements to satisfy "all appropriate inquiry" as defined by 42 U.S.C §9601(35)(B), for the purposes of qualifying for innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA Liability. The User should understand that this practice does not address whether requirements in addition to all appropriate inquiry have been met in order to qualify for landowner liability protections; including (1) the continuing obligation not to impede the integrity and effectiveness of activity and use limitations, (2) the duty to take reasonable steps to prevent releases, or (3) the duty to comply with legally required release reporting obligations.

The objective of this Phase I ESA was to determine the following, using our professional judgment, by means of the Scope of Work hereafter described:

1. A general description of the Subject Property.
2. The current and historical usage of the Subject Property and adjoining properties.
3. Whether RECs exist or have the potential to exist in, on, or at the Subject Property.
4. Whether Subject Property conditions suggest further evaluation based on the presence or probable presence of RECs.

5. Provide information which may assist the Client in evaluating the fair market value of the Subject Property.

A REC is defined by ASTM as (1) the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition.

A Controlled REC is defined by ASTM as a recognized environmental condition affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, activity and use limitations or other property use limitations).

A Historical REC is defined by ASTM as a previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the Subject Property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition.

A de minimis condition is defined by ASTM as a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition.

The term “data gap” means a lack of or inability to obtain information required by this practice despite good faith efforts by the Environmental Professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to, site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.). A significant data gap is one that affects the ability of the environmental professional to identify a REC.

The term "data failure" means the failure to achieve the historical research objective as specified in ASTM E-1527-21 even after reviewing the standard historical resources that are reasonably ascertainable and likely to be useful. Data failure is one type of data gap.

Migration refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.

An Environmental Professional is a person who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases on, at, in, or to a property, sufficient to meet the objectives and performance factors defined in the ASTM Standard Practice E1527-21 and §312.20 of 40 CFR §312. Specifically, an Environmental Professional is defined as a person having one of the following qualifications: (1) A state- or tribal-issued certification or license and three years of relevant, full-time work experience; (2) A bachelor's degree or higher in science or engineering and five years of relevant, full-time work experience; or, (3) 10 years of relevant, full-time work experience.

The date of first research illustrates the earliest date that information was collected for the purposes of this assessment. Under ASTM E1527-21, the report is presumed to be viable when conducted within 180 days prior to the date of acquisition of the Subject Property (or, for transactions not involving an acquisition such as a lease or refinance, the date of the intended transaction). The following components must be conducted or updated within 180 days prior to the date of acquisition or transaction:

1. Interviews with owners, operators, and occupants;
2. Searches for recorded environmental cleanup liens (a *user* responsibility);
3. Reviews of federal, tribal, state, and local government records;
4. Visual inspections of the Subject Property and of adjoining properties; and
5. The declaration by the Environmental Professional responsible for the assessment or update.

The date of first research for the above components was July 23, 2025.

1.2 Scope of Work

This Phase I Environmental Site Assessment has been prepared in accordance with ASTM E1527-21, which has been devised to address the site assessment portion for 40 CFR 312 - Innocent Landowners, Standards for Conducting All Appropriate Inquiries. The Scope of Work performed in this assessment is intended to identify RECs, CRECs, HRECs, de minimis conditions, and Significant Data Gaps through the following tasks:

1. Review of information provided by the User related to environmental cleanup liens; specialized knowledge or experience regarding the Subject Property; the relationship of the purchase price to the fair market value of the property, if the property were not contaminated; and, commonly known or reasonably available information about the Subject Property.
2. Review of local, state, and federal environmental records.
3. Review of historical sources of information to identify the use of the Subject Property dating back to 1940 or first Subject Property development, whichever is earlier.
4. Review of physical and geological settings.
5. Interviews with current and past owners, operators, and occupants to evaluate the potential for environmental contamination to be present at the Subject Property.

6. Inspection of the Subject Property and adjacent properties, to visually identify areas of concern. Adjacent properties were inspected from public roadways and the Subject Property boundaries to the extent possible.
7. The preparation of this report documenting all appropriate inquiries.

The work for this report has been performed in accordance with generally accepted environmental engineering practices for this region. The findings of this report are based upon the opinion and judgment of an Environmental Professional and are dependent upon LaBella's knowledge, the information supplied during the interviews, and data and information solicited from governmental agencies. LaBella makes no other warranty or representation, either expressed or implied, nor is one intended to be included as part of its services, proposals, contracts, or reports.

In addition, LaBella cannot provide guarantees, certifications, or warranties that the Subject Property is or is not free of contamination without a subsurface investigation involving drilling, vapor analysis, laboratory soil analysis, groundwater monitoring well installation, and laboratory groundwater analysis. Even with such a program, the data and samples from any given soil boring or monitoring well will indicate conditions that apply only at that particular location, and such conditions may not necessarily apply to the general Subject Property as a whole.

1.2.1 Significant Assumptions

Significant assumptions made in the performance of this Phase I ESA are as follows:

- Regional groundwater flow follows major topographic gradients.
- Representations made during interviews are accurate.

1.3 Data Gaps

LaBella encountered the following data gaps through the completion of this Phase I Environmental Site Assessment:

Nature of Data Gap	Details/Description	Data Sources Consulted
Limitations to site reconnaissance[1]	At the time of the site reconnaissance, a representative portion of the Subject Property was visually inspected. In addition, visual observations were limited at the time of the site reconnaissance due to material storage and vegetative growth. LaBella was unaccompanied at the time of the site reconnaissance; as such, Subject Property boundaries were approximated and background information was limited.	N/A; refer to Section 4.0 for site reconnaissance methodology.
Historical Use	Historical uses were not obtained for each five-year period. A data failure was obtained regarding Subject Property uses/development prior to 1892.	Historical sources consulted by LaBella included aerial photographs, Sanborn maps, city directories, municipal records, and previous studies
Regulatory Records Review	LaBella has yet to receive complete responses from all regulatory information requests.	LaBella has yet to receive responses from the City of Syracuse and NYSDEC

1. See Section 1.4 Limitations and Exceptions of Assessment for additional limitations of the site visit.

Nature of Data Gap	Details/Description	Data Sources Consulted
Interviews	LaBella has not been able to identify and/or contact any historical owners, operators, or occupants. LaBella has yet to receive a completed owner interview form.	LaBella consulted current owners, municipal, and/or User-provided records to identify historical ownership information and completed a focused online search in an attempt to obtain contact information.
User	LaBella has yet to receive a completed User Questionnaire.	User
Any significant data gaps (a data gap that affects the ability of the environmental professional to identify a REC) are discussed within the Findings and Opinions section of this report.		

1.4 Limitations and Exceptions of Assessment

ASTM E1527-21 expressly recognized the fact that no ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. LaBella's work is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with the Subject Property, and its Scope of Work reflects recognition of the reasonable limits of time and cost.

The work for this report has been performed in accordance with the agreement signed with Albanese Development Corporation. The conclusions of this report are based upon LaBella's opinion and judgment and are necessarily dependent on information supplied by the individuals, entities, and agencies contacted through the course of this assessment. LaBella makes no other warranty or representation, either expressed or implied, nor is one intended to be included as part of its services, proposals, contracts, or reports.

The actual presence of asbestos, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, endangered species, indoor air quality, mold, substances not defined as hazardous substances, cultural and historical resources, archeological resources, ecological resources, industrial hygiene, health and safety, biological agents, and/or high voltage power lines, are not included in the Scope of Work of this assessment unless agreed to by Albanese Development Corporation and LaBella; in such a case, these additional services/ASTM Non-Scope Considerations are discussed in Section 8.0 below. Should Albanese Development Corporation desire any of these additional services, such can be completed by LaBella under separate cover; however, they are not included in the Scope of Work of the Phase I ESA.

The site reconnaissance was limited to visual observations of accessible areas only. No attempt was made to observe conditions in spaces not generally accessible, including but not limited to:

1. Entering crawlspaces and attics
2. Walking on roofs
3. Viewing the interior of pipe chases or plenum
4. Viewing spaces concealed by walls, floors, ceilings, interior finishes, etc.
5. Viewing areas inaccessible due to topographic features or locked doors, obscured by vegetative growth, vehicles, etc.

The site reconnaissance was also limited to visual observations within the perimeter of the Subject Property and other accessible areas only. At the time of the site reconnaissance, a representative portion of the Subject Property and common areas were visually inspected.

1.5 Reliance

Albanese Development Corporation may rely upon the findings of this report and should be aware of the agreed upon Scope of Work and the limitations associated with this Scope of Work.

2.0 SUBJECT PROPERTY AND VICINITY DESCRIPTION

The Subject Property is summarized in the tables below. Property boundaries for the purpose of this assessment were determined based on provided survey mapping and/or tax maps obtained through municipal sources. Subject Property Location and Tax Parcel maps for the Subject Property are located in the Site Maps Appendix.

Subject Property Name	Former Syracuse Developmental Center
Subject Property Address	800-802 South Wilbur Avenue, Syracuse, Onondaga County, New York
Subject Property Acreage (approximate)	21.5
Parcel ID(s)	Portions of 098.2-01-05.2 and 098.2-01-05.4
Current Owner	City of Syracuse
Current Subject Property Use/ Development	Post demolition vacant lot that was formerly developed with portions of a greater four-story, 628,808 square foot institutional building built between 1970 and 1971.
Public Thoroughfares and Access/Egress	South Wilbur Avenue to the east
Exterior Areas	Green areas, asphalt-paved drives, maintained landscape, and cleared land
Surrounding Area	Urban
Subject Property Utilities	
Electric Source	Public available
Natural Gas Source (if provided)	Public available
Potable Water Source	Public available
Sanitary Wastewater Disposal	Public available
Non-Sanitary Wastewater Disposal	N/A; no non-sanitary wastewater is generated

2.1 Building Summary

There are no buildings located on the Subject Property.

2.2 Physical and Hydrogeological Setting

Based on a review of provided records, the following information was obtained regarding the physical and hydrogeological setting of the Subject Property:

Topography	Slightly sloping to the east/southeast; Subject Property is situated along the upper portions of an east facing hill
Elevation (feet above mean sea level)	~400-540
Subject Property Water Bodies	N/A
Nearest Water Body	Harbor Brook approximately 680 feet to the south
Apparent Groundwater Flow in Surrounding Area	East
Soil Map Unit(s)	Camillus silt loam - The Camillus series consists of moderately deep, well drained soils formed in till and an underlying weathered calcareous shale bedrock. Slopes range from 0 through 25 percent. Honeoye silt loam - The Honeoye series consists of very deep, well drained soils formed in loamy till. They are nearly level to very steep soils on till plains, hills, ridges, and drumlins. Slope ranges from 0 to 65 percent. Ontario and Madrid soils - The Ontario series consists of deep or very deep, well drained soils formed in loamy till which is strongly influenced by limestone and sandstone. They are nearly level to very steep soils on convex upland till plains and drumlins. Slope ranges from 0 to 60 percent. The Madrid series consists of very deep, well drained soils. They formed in loamy deposits derived mainly from sandstone, limestone and granite on till plains and moraines. Permeability is moderate or moderately slow in the solum and moderately slow in the substratum. Slope ranges from 3 to 50 percent.
Geological Information	Syracuse Formation; consists of dolostone and shale from the Upper Silurian Age
Anticipated Depth to Bedrock (feet)	Approximatly 5-15 feet based on recent investigations
Anticipated Depth to Groundwater (feet)	Approximately 4-12 feet based on recent investiations

Refer to Figure 1 for a copy of the Subject Property Location/Topographic Map. Copies of the soil and geological maps and associated descriptions are summarized in the ERIS Physical Setting Report

included in the Hydrogeologic Information Appendix. Groundwater flow was determined based on interpretation of the USGS topographic map and/or provided previous studies.

3.0 USER-PROVIDED INFORMATION

In accordance with the ASTM E1527-21, a “User” is defined as the party seeking to complete an environmental site assessment of the property. If the user is aware of any specialized knowledge or experience that is material to RECs in connection with the Subject Property, it is the user's responsibility to communicate any information based on such specialized knowledge or experience to the Environmental Professional. The User Questionnaire was not completed.

3.1 Reason For Performing Phase I ESA

According to ASTM 1527-21, either the User shall make known to the Environmental Professional the reason why the User wants to have the Phase I ESA performed or, if the User does not identify the purpose of the Phase I ESA, the Environmental Professional shall assume the purpose is to qualify for the Landowner Liability Protections under the Brownfields Amendments. The User did not identify the reason for conducting the Phase I ESA.

4.0 SITE RECONNAISSANCE

LaBella conducted a site reconnaissance of the Subject Property as well as observations of adjacent properties as viewed from the Subject Property boundaries and public roadways, to the extent possible, to visually identify areas of concern. The site reconnaissance was conducted on July 29, 2025 by Christopher Putzer, Environmental Scientist with LaBella.

LaBella was unaccompanied at the time of the site reconnaissance; as such, Subject Property boundaries were approximated and background information was limited.

Observations discussed in this Section are noted on Figure 3. Copies of the field notes taken during the site reconnaissance are included in the Site Reconnaissance Worksheet Appendix. Representative photographs of the Subject Property at the time of the site reconnaissance are included in the Site Photographs Appendix.

At the time of the site reconnaissance, a representative portion of the Subject Property was visually inspected. In addition, visual observations were limited at the time of the site reconnaissance due to material storage and vegetative growth. Additional site visit limitations are discussed in Section 1.4.

Past Uses of Subject Property

No apparent indicators that would indicate historical uses of the Subject Property (e.g., signs, equipment, etc.) were observed at the time of the site reconnaissance.

Hazardous Substances and Petroleum Products

No hazardous substances or petroleum products were observed on-site.

Approximately five containers of 55-gallons or less containing hydraulic oil associated with on-site construction activities were observed on the southern adjacent property (greater tax parcel). These materials are stored in a shipping container, and no evidence of a release was observed.

Unidentified Substance Containers

There were no unidentified substance containers (e.g., unlabeled drums or totes) observed at the time of the site reconnaissance.

Storage Tanks

No storage tanks were observed on-site. The following tanks were identified on the southern adajcent property (greater tax parcel):

Quantity	Type	Location	Capacity (gallons)	Construction	Contents	Age	Staining/ Evidence of Release?
One	AST	Southern adjacent property (greater tax parcel)	~100	Steel	Off-road diesel	Temporary for constructi on	None
One	AST	Southern adjacent property (greater tax parcel)	500	Steel	Diesel	Temporary for constructi on	None

Solid, Hazardous, and/or Regulated Wastes

No solid, hazardous, and/or regulated wastes were identified on-site. The following wastes were noted, stored, or generated on the southern adjacent property (greater tax parcel):

Material	Source/Process	Storage Location/Quantity	Transporter/Hauler
Scrap metal	Demolition operations	Roll-off dumpster on southern adjacent property (greater tax parcel)	Unknown
Waste oil	Construction operations	Four 55-gallon drums and six 5-gallon buckets on southern adjacent property (greater tax parcel)	Staged for off-site disposal

Evidence of fill material (soil and gravel piles) associated with construction activities was observed on the eastern portion of the Subject Property. No leaks, stains, spills, or unusual odors were noted in the vicinity of the fill material at the time of the site visit.

Odors

No apparent strong, pungent, or noxious odors were observed at the Subject Property at the time of the site reconnaissance.

Standing Water/Pools of Liquid

No apparent pools, sumps, or standing water containing liquids likely to be hazardous substances or petroleum products were observed at the Subject Property at the time of the site visit.

PCB-Containing Equipment

The following potential PCB-containing equipment was observed at the time of the site reconnaissance:

Potential PCB-Containing Equipment	Location	Evidence of Leaks
Pole-mounted transformers	One on eastern boundary of Subject Property	No evidence of a release from this equipment was observed.

Stains and Corrosion

No apparent stains or corrosion were observed at the time of the site reconnaissance.

Stressed Vegetation

No apparent stressed vegetation was observed at the time of the site reconnaissance.

Drains and Sumps

Storm drains were noted throughout the driveways. These drains reportedly discharge to the municipal sewer system. There were no stains, spills, or unusual odors noted in the vicinity of the storm drains at the time of the site reconnaissance.

Wastewater

Non-sanitary wastewater does not appear to be generated or discharged at the Subject Property.

Septic Systems and/or Cesspools

No apparent indications of septic systems or cesspools were observed at the time of the site reconnaissance or are reported to be located on the Subject Property.

Wells

No apparent potable, monitoring, irrigation, dry, or injection wells were observed at the time of the site reconnaissance or are reported to be located on the Subject Property.

Additional Information

There was no evidence of other potential concerns identified at the time of the site reconnaissance.

Adjacent Property Use

The Subject Property is bordered by the following properties:

Direction	Current Use/Occupant and Address (if Determinable)	Apparent Past Use	Potential Concerns Visible During Site Visit
North	Arc of Onondaga (600 South Wilbur Avenue), and Rosamond Gifford Zoo (1 Conservation Place)	Commercial	None
East	Residences (601-627 South Wilbur Avenue)	Residential	None
South	Southern portion of 800-802 Wilbur Avenue	Educational	None
West	Vacant commercial (410 Grand Avenue)	Vacant land	None

Refer to Regulatory Informationbelow for additional information regarding the northern adjacent property.

4.1 Site Reconnaissance Summary of Findings

Observations made by LaBella during the site reconnaissance identified the following features indicative of the presence or likely presence of hazardous substances or petroleum products in, on, or at the Subject Property:

- Pole-mounted transformers were observed along the eastern boundary of the Subject Property; no evidence of a release from this equipment was noted.
- Evidence of fill material (soil and gravel piles) associated with construction activities was observed on the eastern portion of the Subject Property. No leaks, stains, spills, or unusual odors were noted in the vicinity of the fill material at the time of the site visit.

It should be noted that all of the hazardous substances/petroleum products, including ASTs and drums of hydraulic and waste oil, were observed on the southern adjacent property (greater tax parcel) and are in the process of being hauled off-site or are being utilized in conjunction with site redevelopment. No obvious concerns were identified relative to these materials.

5.0 SUBJECT PROPERTY HISTORY AND USE

LaBella attempted to review reasonably ascertainable and readily available standard sources of historical information as defined by the ASTM E1527-21 in order to identify all obvious uses of the Subject Property back to the first developed use or 1940, whichever is earlier (i.e., the historical research objective according to ASTM). Uses of the properties adjacent to the Subject Property are identified in this report only to the extent that this information was revealed in the course of researching the Subject Property itself and were determined at the discretion of the Environmental Professional. As such, LaBella reviewed only as many of these sources as necessary to achieve the historical research objective. Data failures and data gaps are identified, defined, and evaluated for their significance in Section 1.3 of this report.

5.1 Sanborn Fire Insurance Maps

The apparent historical use of the Subject Property and surrounding area, as depicted by the Sanborn maps, is summarized in the table below. A copy of the Sanborn maps is included in the Historical Information Appendix.

Year	Location	Occupant/Development
1892	Subject/Greater Property	Occupied by the New York State Asylum for Idiots and developed with an ice house, produce house, hot house, carpentry shop, farm house, dormitory, and educational building
	Surrounding Area	Utilized for education and residential purposes
1911	Subject/Greater Property	Occupied by the Syracuse State Institution for Feeble Minded Children and developed with an ice house, greenhouses, produce house, carpentry shop, farm house, dormitory, and educational building
	Surrounding Area	Utilized for commercial, educational, and residential purposes
1951, 1953, 1962, and 1967	Subject/Greater Property	Occupied by the Syracuse State School and developed with a carpentry shop, farm house, paint shop, ice house, meat market, milk house, oil house, greenhouses, dormitory, and educational building
	Surrounding Area	Utilized for commercial, educational, and residential purposes
1971	Subject/Greater Property	Developed with the the former greater structure (constructed 1970-1971) and an additional educational building and occupied by Syracuse State School for the Handicapped

Year	Location	Occupant/Development
	Surrounding Area	Utilized for commercial, educational, and residential purposes
1990	Subject/Greater Property	Developed with the former greater structure and occupied by Syracuse Development Center
	Surrounding Area	Utilized for commercial, educational, and residential purposes

5.2 City Directories

City Directory research was completed by ERIS. Identified occupants associated with the Subject Property are detailed in the table below. Copies of street directories are included in the Historical Information Appendix.

Year	Occupant Listings
1925 and 1930	Syracuse State School for Mental Defectives
1935, 1939, 1944, 1949, 1954, 1959, 1964, 1968, and 1973	Syracuse State School
1977-78, 1983, 1988, and 1993	Syracuse Developmental Center
1998	Foster Grandparent Program, NY State of Housing & Community Renewal Division, Senior Companion Program, and Syracuse Developmental Day Care
2000	Central NY DDSO, CSEA Local 414, Foster Grandparent Program, Mental Retardation Offices, Senior Companion Program, and Syracuse Dev Day Care Center
2003	Central NY DDSO, CSEA Local 414, Developmental Center Res Gatehouse Apart Syracuse, Enable, Epilepsy Foundation, Peace Inc, Senior Companion Program, Syracuse Dev Day Care Center, and Syracuse Developmental Center
2008	Arc of Onondaga County, Central NY DDSO, Civil Services Employees Association Inc, CSEA Local 414, Enable, Epilepsy Foundation, Peer Networking Group, and Support Services

Year	Occupant Listings
2012	Arc of Onondaga County, Central NY Developmental Services, CSEA Local 414, Epilepsy Foundation, Medicaid Service Coordinators, PEF, Senior Companion Program, Special Olympics Onondaga County, Support Services, and Syracuse Developmental Center
2016	Central NY Developmental Services, CSEA Local 414, Epilepsy Foundation, Medicaid Service Coordinators, Southside Charter Academy, Special Olympics Onondaga County, Support Services, and Syracuse Developmental Center
2020	Central NY Developmental Services, Enable Inc, Epilepsy Foundation, Medicaid Service Coordinators, Special Olympics Onondaga County, Support Services, and Syracuse Developmental Day Care

It should be noted that several of the recent listings for the Subject Property may not have been present the Subject Property as LaBella understands that the Subject Property has been vacant for approximately 10 years.

Review of the city directories indicated that properties surrounding the Subject Property were historically utilized for commercial, educational, and residential purposes.

5.3 Aerial Photographs

The table below outlines observations of the Subject Property and surrounding area obtained from the review of aerial photographs. Copies of aerial photographs are included in the Historical Information Appendix.

Year	Location	Development
1956	Subject Property	Developed with several structures that appear consistent with an educational campus
	Surrounding Area	Utilized for apparent commercial and residential purposes
1972, 1985, 1995, 2003, 2008, 2013, and 2019	Subject Property	Appears to have been developed with the former greater structure; extensive areas of land disturbance (presumably related to recent redevelopment work) present on the western, northern, and eastern portions of the Subject Property in at least 1972
	Surrounding Area	Utilized for apparent commercial and residential purposes

5.4 Topographic Maps

As sufficient information was obtained through a review of Sanborn maps, city directories, aerial photographs, previous reports, and municipal records, topographic maps were not reviewed as part of this assessment.

5.5 Municipal Records

LaBella was provided copies of municipal records from the City of Syracuse from a previous Phase I ESA. In addition, limited assessment information was obtained from the Landmax Data Systems, Inc. website and Onondaga County Image Mate website on July 23, 2025. The following information was obtained from these records. Copies of municipal records are included in the Municipal Information Appendix.

	Findings/Details
Parcel ID(s)	Portions of 098.2-01-05.2 and 098.2-01-05.4
Subject Property Size (acres)	47.8 (greater property); LaBella understands that the Subject Property includes 21.5-acres of the greater property.
Current Owner	City of Syracuse
Former Owners	Syracuse Center LLC, Syracuse Resort Dev Inc, NYS Urban Dev Corp, NYS Housing Finance Agency
Square Footage of Building(s)/Date(s) of Construction	628,808/1970 (this structure was recently demolished)
Provided Utilities	Public sewer and water; natural gas and electric

City of Syracuse records included a 2018 letter indicating various violations for the Subject Property, generally associated with failure to properly maintain the structure. No obvious records of environmental concern were reported based on this document.

In addition, LaBella was provided with various site maps including general layouts of the Site Building and sanitary sewer and water layouts for the greater property.

5.6 Recorded Land Title Records

According to the User's Responsibility section of the ASTM Standard Practice E1527-21, “to meet the requirements of 40 C.F.R. 321.20 and 312.25, a search for the existence of environmental liens and AULs that are filed or recorded against the subject property must be conducted.” ASTM also states that the User's requirements "do not impose on the environmental professional the responsibility to undertake a review of land title records or judicial records for environmental liens or AULs." In accordance with the ASTM Standard Practice E1527-21, LaBella has requested the User provide copies of the title records for the Subject Property.

Title records were not provided to LaBella for review.

5.7 Additional Sources

No additional historical sources were reviewed.

5.8 Review of Previous Reports

LaBella previously completed the following reports:

- *Phase I ESA report, 800-802 South Wilbur Avenue,* dated October 31, 2022; this report included the review of a previous Phase I ESA completed by PSA and dated February 11, 2008 and a previous Limited Phase II ESA completed by B&K and dated March 14, 2008
- *Preliminary Phase II ESA report, 800-802 South Wilbur Avenue*, dated January 16, 2023
- *Supplemental Phase II ESA report, 800-802 South Wilbur Avenue,* dated March 16, 2023
- *Post Demolition Phase II ESA report, Portion of 800-802 South Wilbur Avenue,* dated August 5, 2025

The following is a summary of the information obtained from the previous reports.

<u>2008 Phase I ESA</u>

The 2008 Phase I ESA included the Subject Property and remaining portions of the greater tax parcel (totalling 48 acres). The Subject Property was developed with one structure and was utilized for office space and storage.

At the time of the site visit, various stored materials were observed on the Subject Property including various drums and smaller containers, a 275-gallon diesel AST within the lowest level (associated with a backup generator), a 550-gallon chlorine AST on the second floor (associated with a swimming pool), and a 5,000-gallon diesel UST to the west of the garage area (off-site relative to the current Subject Property) that was reportedly been decommissioned and closed-in-place in 1997.

Historical sources indicated that the Subject Property had been utilized as a mental institution since at least 1892, including the existing site building since 1970.

The Subject Property was identified as a RCRA Non-Generator, FINDS facility, UST/Historic UST facility, Manifest Site, and NY Spills site. the UST listings referenced the closed-in-place 5,000-gallon diesel UST along with a 2000-gallon gasoline UST that was removed in 1998; a NY Spill listing was identified in association with the gasoline UST closure and thus considered an HREC. An additional Spill included oil found in a drain and had been addressed to the satisfaction of the regulator.

A south adjacent property was identified as a gas station with associated UST and LTANK listings. The consultant considered such to be a REC for the greater property. *LaBella notes that based on the topographic location of this facility relative to the Subject Property currently being assessed, such is not considered to pose a potential environmental concern at this time.*

The following REC was identified as associated with the Subject Property:

- An oil house, paint/printing shop, hospital, and laundry area were indicated on the Subject Property at various times according to the 1911, 1951, 1953, and 1962 Sanborn Maps. It is likely that solvents, petroleum products, paints, cleaning chemicals, and other hazardous materials were utilized and stored at these areas and other areas of the Subject Property. The information available concerning hazardous material use and disposal at these buildings and the remainder of the Subject Property could not be determined during the assessment.

In addition, the following HREC was identified as associated with the Subject Property:

- According to the database report, the Subject Property is identified in the UST, Historic UST, NY Spills, and NY Historic Spills databases. The UST and Historic UST listings are due to two registered USTs on the Subject Property. In 1997, a 5,000-gallon gasoline UST was closed in place at the Subject Property. In 1998, a 2,000-gallon gasoline UST was closed and removed from the Subject Property. A NY Spills incident appears to be related to the 1998 tank removal. The information available indicated that soil contamination was discovered after the tank was removed the ground. The spill was closed in October 2003. The remaining NY Spills and NY Historic Spills incident occurred in October 1986 when a type of petroleum was found in a floor drain. A sample was analyzed and the material was found to contain less than 50 ppm PCBs. The material was collected and disposed of off-site. The incident was closed in July 1988. Given the regulatory closure of these past spills at the Subject Property, PSI does not consider these spills to represent a REC; however, they do represent a HREC. LaBella notes that no closure documentation was reviewed relative to the closed in place 5,000-gallon UST. As such, environmental conditions relative to that tank are unknown. Nonetheless, given the location of this closed in place UST relative to the Subject Property currently being assessed, such is not considered to pose an environmental concern for the portion of the greater property being assessed by LaBella.

PSI recommended a Phase II ESA to address the historical use and storage of hazardous materials at the Subject Property. PSI also recommended that areas of indiscriminate dumping on the Subject Property be evaluated to determine if this dumping had impacted the Subject Property.

<u>2008 Phase II ESA</u>

On March 6 and 7, 2008, 11 borings were installed at the Subject Property in the vicinity of the former paint/printing shop, the former oil house, the former hospital, and the former laundry area, respectively. Six soil samples were collected and analyzed for VOCs, SVOCs, PCBs, and metals. Operations of potential concern on the current Subject Property, as identified through historical sources, do not appear to have been investigated as part of this study. –

Two surface soil samples were collected from a debris pile identified during the 2008 Phase I ESA and analyzed for SVOCs, PCBs, and metals. Seven SVOCs were identified exceeding NYSDEC guideline values in SS-1.

The detection of benzo(a)pyrene above NYSDEC guideline values in two soil samples was a low-level exceedance and did not appear to constitute an environmental concern. -Metal concentrations only slightly exceeded background concentrations and did not appear to be of significant environmental concern. No VOCs or PCBs were detected above NYSDEC guideline values. The site investigation was limited to the subsurface soil borings and surface soil sample locations. To fully define the nature and extent of contamination identified, additional site investigation would be required in the indiscriminate dumping area. It should be noted that the area where further investigation was recommended (the indiscriminate dumping area) is located off-site and is not considered to pose a potential concern to the current Subject Property based on its distance from and downgradient location relative to the same.

In addition to the above, LaBella was provided with a Limited Regulated Building Material Survey Report for the Subject Property, completed by Lu Engineers and dated April 2022. As part of this report, a site inspection was completed and building material samples were collected and analyzed to determine whether asbestos, PCB-containing caulk, and/or lead paint was present within the structure.

At the time of this report, Lu Engineers had noted a 275-gallon diesel fuel tank (AST) within the lower level of the structure; the tank was observed to be partially filled with fluid. As part of Lu's survey, visual observations were also made to determine the extent of regulated materials present. Such materials were noted to include paints, unmarked drums (both partially full and empty), hydraulic oil containers, lubricant containers, PCBP ballasts, fluorescent light bulbs, mercury vapor lighting, HID light bulbs, mold growth, and refrigerant, along with general hazards including hypodermic needles, fire debris, and other various garbage and debris. Various asbestos (several hundred thousand square feet), PCB, and lead paint-containing materials were confirmed to be present on-site. In addition, visible mold growth was observed and it was estimated that approximately 60% of the structure was contaminated with mercury vapor, fluorescent, and HID bulb debris.

<u>2022 Phase I ESA</u>

Based on this report, the Subject Property consisted of 21.5 acres and was developed with portions of a greater four-story, 628,808 square foot institutional building constructed between 1970 and 1971 that had most recently been used as offices and storage; this structure had been vacant for approximately 10 years.

According to historical sources, the Subject Property was developed with various former structures and utilized as a psychiatric facility between at least 1892 and 1967. Former structures indicative of storage and/or use of hazardous materials and/or petroleum products that could pose a potential environmental concern included an oil house, paint/printing shop, greenhouses, and carpentry shop,

which were present at various times between at least 1911 and 1967. Between at least 1970 and 2022, the Subject Property was developed with the former structure, utilized as a psychiatric facility through the early 2000s with later uses consisting of office space and storage.

At the time of the site reconnaissance, the following was noted:

- Nine five-gallon buckets of emulsified asphalt and five 55-gallon drums of floor cleaning chemicals were observed stored within the building. Minor staining was observed proximate one five-gallon bucket, however, no floor drains were observed in the vicinity of the staining. LaBella recommended that all hazardous chemicals be removed from the building prior to demolition.

- Vent pipes were observed on the exterior of the building. Based on the location of the vent pipes, it was presumed that an AST was currently or was historically located in the building. Based on the condition of the building, LaBella was unable to access the entirety of the structure.

- Areas of solid waste disposal, including household debris, were observed on the Subject Property. LaBella recommended that these materials be collected and properly disposed of as a best management practice.

- Evidence of fill material, including areas of mounding and potential settling, were observed throughout exterior areas on the Subject Property. The nature of fill material present on-site is unknown. LaBella notes that fill material generated as part of Subject Property redevelopment/construction activities may be subject to chemical testing and/or proper handling requirements which may impact the overall project budget.

The Subject Property was identified in regulatory records as the following:

- UST facility associated with two former USTs that were closed and removed from the Subject Property.

- The Subject/Greater Property was identified as a RCRA Non-Generator with no unresolved violations and as a Manifest Facility. Wastes generated and/or transferred from the Subject Property have included PCBs, various metals, PCE, TCE, corrosive, ignitable, and reactive wastes, and spent non-halogenated solvents. While there were no records of release reported, these listings are indicative of past use/storage/handling of various hazardous materials on the greater property.

Adjacent properties did not suggest a concern to the Subject Property.

LaBella identified the following RECs:

- An oil house, paint/printing shop, greenhouses, and carpentry shop were located on the Subject Property at various times between at least 1911 and 1967. It is likely that solvents, paints, cleaning chemicals, and other hazardous materials and/or petroleum products were utilized and stored at these areas and other areas of the Subject Property; material handling practices are unknown. While a Limited Phase II ESA was conducted at the Subject/ Greater Property in 2008 to address historical uses, that scope did not include an investigation of each area of likely chemical use/storage. As such, there is the potential for impact to exist in areas not previously investigated based on the historical uses of the Subject Property.

- Evidence of fill material, including areas of mounding and potential settling, were observed throughout exterior areas on the Subject Property. The nature of fill material present on-site is unknown. LaBella notes that fill material generated as part of Subject Property redevelopment/construction activities may be subject to chemical testing and/or proper handling requirements which may impact the overall project budget.

- The Subject/Greater Property was identified as a RCRA Non-Generator with no unresolved violations and as a Manifest Facility. Wastes generated and/or transferred from the Subject Property have included PCBs, various metals, PCE, TCE, corrosive, ignitable, and reactive wastes, and spent non-halogenated solvents. While there were no records of release reported, these listings are indicative of past use/storage/handling of various hazardous materials on the greater property.

No CRECs, HRECs, de minimis conditions, or significant data gaps were identified in connection with the Subject Property.

<u>2023 Preliminary Phase II ESA</u>

According to the report, the overall property addressed as 800-802 South Wilbur Avenue and historically utilized as the Syracuse Developmental Center comprises an approximately 47.8-acre area. However, for the purposes of the Preliminary Phase II ESA, the extent was limited to the 21.5-acre area (Subject Property). This area was selected based on a prior conceptual redevelopment plan.

The Preliminary Phase II ESA consisted of the advancement of 14 soil borings, installation of temporary groundwater monitoring wells and laboratory analysis of 13 soil and one groundwater sample. This Preliminary Phase II ESA was performed to evaluate whether the RECs identified in the Phase I ESA report by LaBella dated October 31, 2022, including review of other previous environmental reports, have impacted the subsurface soil and groundwater at the Subject Property and to evaluate current soil and groundwater conditions for use in planning for redevelopment of the Subject Property. Investigation was limited to the approximately 21.5-acre area and based on deteriorated building conditions, did not include sampling within building footprints. The following conclusions were made based on the results of the Phase II ESA:

- No visual or olfactory evidence of environmental impairment was identified within any of the soil borings advanced with the exception of SB-08 at 7.5 to 8 ft bgs. Black staining and petroleum odors were identified associated with these soils. PID readings of soils from SB-08 at 7.5 to 8 ft bgs were identified slightly above background conditions, at 0.4 ppm.

- VOCs were detected in soil borings at concentrations above laboratory MDLs; however, the concentrations detected do not exceed Unrestricted Use SCOs. Select metals and pesticides were identified in soil samples above Unrestricted Use SCOs; however, these compounds were not identified above Restricted Residential SCOs. Restricted Residential SCOs are the most appropriate comparison criteria based on the planned future use of the Subject Property for multifamily housing.

- Numerous SVOCs were detected in one soil sample (SB-08, 7.5-10 ft bgs) at concentrations exceeding Unrestricted and Restricted Residential SCOs. The SVOCs detected are polyaromatic hydrocarbons (PAHs) and are typically associated with asphalt pavement or partially combusted fossil fuels. Lead and pesticides were also identified above Unrestricted Use SCOs in this soil sample, but below Restricted Residential SCOs. As mentioned above, black staining and petroleum odors were noted in a portion of this sample interval during the investigation. While a temporary groundwater monitoring well was installed at this location, the well did not produce sufficient groundwater for development and sampling. Based on the preliminary nature of this assessment, the nature and extent of the impacts in SB-08 have not been delineated.

- SVOCs were detected in one groundwater sample slightly exceeding TOGS 1.1.1 groundwater standards. However, based on elevated turbidity readings collected at the time of sampling, these results may not be representative of dissolved concentrations in groundwater. The Subject Property is located in an urban area and groundwater is not a source of drinking water. Drinking water is supplied from a municipal source.

Based on the conclusions above, LaBella recommended the following:

- Delineation of soil and groundwater should be completed in the vicinity of SB-08 to determine if additional subsurface impacts are present in this area which could warrant remediation.

- If the revised redevelopment plans expand the Subject Property boundary beyond the current extent, additional investigation may be recommended. Based on the historical presence of USTs and a historical boiler house which was demolished in the early 1970s, additional investigation may include a geophysical survey to assess for orphan USTs (primarily near the historical boiler house) and additional soil and groundwater sampling.

<u>2023 Supplemental Phase II ESA</u>

According to the report, the site consisted of approximately 29 acres (21.5 acres of which was the Subject Property). ADC provided LaBella with revised redevelopment plans for the Subject Property. These revised plans included a slight increase in land area and additional residential structures (apartment buildings and townhouses). Based on the revised redevelopment plans, and conversations with ADC, the purpose of the Supplemental Phase II ESA is to evaluate subsurface soil and groundwater in the vicinity of redevelopment areas based on revised plans and not included in the Preliminary Phase II ESA. In addition, to delineate subsurface impacts identified in the vicinity of SB-08 and install additional soil borings in the vicinity of the former oil house and carpentry shop.

The Supplemental Phase II ESA consisted of the advancement of 20 soil borings, installation of a temporary groundwater monitoring well and laboratory analysis of eight soil and one groundwater sample. The following conclusions were made based on the results of the Phase II ESA:

- No visual or olfactory evidence of impairment was identified within any of the soil borings advanced with the exception of SB-15 at 2.5-5 ft bgs, SB-16 at 7.5-10 ft bgs and SB-27 at 2.5-5 ft bgs. Black soils/staining was identified associated with these soils. In addition, slight petroleum odors were identified associated with soils at SB-15 at 2.5-5 ft bgs. PID readings were not identified above background conditions in any of the above soil samples. Evidence of impairment or urban fill (i.e., ash or cinders) were not identified in any of the other soil borings during the work.

- Three VOCs and one pesticide were detected in soil borings at concentrations above laboratory MDLs; however, the concentrations detected do not exceed Unrestricted Use SCOs. Metals including mercury and lead were identified in soil samples above Unrestricted Use SCOs at SB-15 at 2.5-5 ft bgs and SB-16 at 7.5-10 ft, respectively; however, these compounds were not identified above Restricted Residential SCOs. Restricted Residential SCOs are the most appropriate comparison criteria based on the planned future use of the Subject Property for multi-family housing.

- SVOCs were detected in one soil sample (SB-33, 5.0-7.5 ft bgs) at concentrations exceeding Unrestricted and Restricted Residential SCOs. The SVOCs detected are polyaromatic hydrocarbons (PAHs) and are typically associated with asphalt pavement or partially combusted fossil fuels. Note that SVOCs were also detected above Restricted Residential SCOs in sample SB-08 collected during the Preliminary Phase II ESA in January 2023.

- SVOCs were detected in one groundwater sample, TW-05 (SB-32) slightly exceeding TOGS 1.1.1 groundwater standards. However, based on elevated turbidity readings collected at the time of sampling, these results may not be representative of dissolved concentrations in groundwater. The Subject Property is located in an urban area and groundwater is not a source of drinking water. Drinking water is supplied from a municipal source.

Based on data from the January 2023 Preliminary Phase II ESA and this Supplemental Phase II ESA, select metals, pesticides and SVOCs had been identified sporadically throughout the Subject Property

in soil at concentrations exceeding Unrestricted Use SCOs. In addition, SVOCs had been detected in soil at concentrations exceeding Restricted Residential Use SCOs and in groundwater at concentrations exceeding TOGS 1.1.1 groundwater standards; however, based on the nature of these compounds, the elevated concentrations in groundwater are likely attributed to high turbidity and may not be representative of dissolved concentrations.

The heavy metal and pesticide impacts are generally limited to shallow soils and may be the result of atmospheric deposition and/or historical operations at the property. The SVOC impacts are generally deeper and may be the result of historical filling.

Based on the sporadic nature of the soil impacts, LaBella recommended completing one of the two following approaches as part of redevelopment:

- Option 1: Remediation: This approach involves excavation and off-site disposal of SVOC impacts above Restricted Residential SCOs. The impacts identified are sporadic and appear to be the result of historical filling; as such, additional areas of similar impacts could be encountered during future earthwork. For this reason, Option 1 would include a design phase investigation to provide a more comprehensive understanding of the subsurface in the areas of planned earthwork during redevelopment. Laboratory analysis associated with the design phase investigation would be limited to SVOCs unless additional impacts are observed in the field.

  The areas of known impacts above Restricted Residential SCOs and any additional areas identified during the design phase investigation would be excavated until confirmatory soil samples indicate contamination has been removed. Excavated material would be transported to a NYCRR Part 360 landfill for disposal.

- Option 2: Management During Construction: Based on the potential for the identified impacts to be widely distributed at the Subject Property and the relatively stable nature of these compounds (i.e., generally don't leach to groundwater and don't volatilize), Option 2 would not involve active remediation or further investigation. Rather, an Environmental Management Plan (EMP) would be drafted to provide procedures for the identification, management and proper disposal of any impacted materials which could be encountered during construction. The EMP would include implementation of a Community Air Monitoring Program (CAMP) and environmental oversight during earthwork and guidance for the segregation of excavated materials. Option 2 could result in less overall cost to the project while providing more comprehensive exposure prevention measures during earthwork and as part of the end use of the Subject Property.

<u>Post Demolition Phase II ESA</u>

According to the report, based on the prior environmental reports, soil samples from 2 of 34 soil borings identified concentrations of SVOCs slightly above Restricted Residential Soil Cleanup

Objectives (SCOs). As the buildings previously located at the Subject Property have been recently demolished, LaBella was authorized to complete this Post Demolition Phase II ESA to further investigate soil and groundwater conditions in the area of the former building footprints.

The Post Demolition Phase II ESA consisted of the advancement of six soil borings, installation of a temporary groundwater monitoring well and laboratory analysis of two soil and one groundwater sample, as summarized below. The following conclusions were made based on the results of the Phase II ESA:

- No field evidence of impact (i.e. elevated PID readings, odors, staining, sheen, etc.) was observed within any of the soil borings installed. In addition, urban fill material was not identified in any of the soil borings.
- No VOCs, SVOCs or metals were detected above Unrestricted Use SCOs in soil.
- No VOCs or SVOCs were detected above NYSDEC AWQS in groundwater.

Based on the results of this Post Demolition Phase II ESA, no field evidence of environmental impairment or urban fill material was observed within any of the soil borings or soil samples collected. In addition, laboratory results for soil or groundwater samples did not identify any VOCs, SVOCs or metals above applicable NYSDEC criteria.

Based on this information, additional soil and groundwater investigation and/or remediation did not appear warranted at the Subject Property at the time.

Based on the result of the Preliminary Phase II ESA, Supplemental Phase II ESA and Post Demolition Phase II ESA the potential for encountering impacts appears very limited and not widely distributed throughout the Subject Property. As such, future planned development and excavations may encounter limited impacts that may require excavated material to be handled/managed in accordance with NYSDEC Part 360 regulations as urban fill is considered by the NYSDEC to be a solid waste that cannot be treated as Construction and Demolition solid waste.

In addition, as previously identified in the Supplemental Phase II ESA, the development of an Environmental Management Plan (EMP) would be required. The EMP would outline procedures for the proper identification and management of known or unknown impacted materials which could be encountered during future earthwork and construction at the Subject Property (e.g., utility maintenance, redevelopment, etc.).

The EMP would include implementation and environmental oversight on an as needed basis during earthwork as suspect materials or impacts are identified and include guidance for the segregation of excavated materials, if needed.

Copies of the reviewed reports are included in the Previous Reports Appendix.

5.9 Historical Summary of Findings

Based on LaBella's review of historical sources, the history of the Subject Property is as follows:

Time Period	Apparent Use/Development
Between at least 1892 and 1967	Developed with various former structures and utilized as a psychiatric facility. Former structures indicative of storage and/or use of hazardous materials and/or petroleum products that could pose a potential environmental concern included an oil house, paint/printing shop, greenhouses, and carpentry shop, which were present at various times between at least 1911 and 1967.
1970-1971 through present	Developed with one structure, utilized as a psychiatric facility through the early 2000s with later uses consisting of office space and storage. The Subject Property has been vacant for approximately 13 years. It should be noted that the structure was demolished in 2024 and the Subject Property consists of cleared land as of the date of this report.

Based on LaBella's review of historical information, the adjacent properties were historically undeveloped or utilized for commercial, educational, and residential purposes.

LaBella's historical research identified the following conditions indicative of the presence or likely presence of hazardous substances or petroleum products in, on, or at the Subject Property:

- Based on the records reviewed, an oil house, paint/printing shop, greenhouses, and carpentry shop were located on the Subject Property at various times between at least 1911 and 1967, prior to development of the Greater Syracuse Development Center, which was built in 1970-1971 and was recently demolished. It is likely that solvents, paints, cleaning chemicals, and other hazardous materials and/or petroleum products were utilized and stored at these areas and other areas of the Subject Property; material handling practices are unknown. Several investigations have been conducted on the Subject Property between 2008 and 2025. As a result of the investigations, select metals, pesticides and SVOCs had been identified sporadically throughout the Subject Property in soil at concentrations exceeding Unrestricted Use Soil Cleanup Objectives (SCOs). SVOCs have been detected in soil at concentrations exceeding Restricted Residential Use SCOs and in groundwater at concentrations exceeding TOGS 1.1.1 groundwater standards; however, based on the nature of these compounds, the elevated concentrations in groundwater are likely attributed to high turbidity and may not be representative of dissolved concentrations.

  The heavy metal and pesticide impacts are generally limited to shallow soils and may be the result of atmospheric deposition and/or historical operations at the property. The SVOC impacts are generally deeper and may be the result of historical filling. Based on the results

of the investigations, the potential for encountering impacts appears very limited and not widely distributed throughout the Subject Property. As such, future planned development and excavations may encounter limited impacts that may require excavated material to be handled/managed in accordance with NYSDEC Part 360 regulations as urban fill is considered by the NYSDEC to be a solid waste that cannot be treated as Construction and Demolition solid waste. As such, the development of an Environmental Management Plan would be required. The Environmental Management Plan would outline procedures for the proper identification and management of known or unknown impacted materials which could be encountered during future earthwork and construction at the Subject Property (e.g., utility maintenance, redevelopment, etc.). The Environmental Management Plan would include implementation and environmental oversight on an as needed basis during earthwork as suspect materials or impacts are identified and include guidance for the segregation of excavated materials, if needed.

- Previous reports identified limited staining related to chemical storage in the former Syracuse Developmental Center Building and also identified evidence (vent pipes) of an AST that was likely historically located within the former building. Additionally, areas of solid waste disposal, including household debris, was previously noted on-site. These items appear to have been addressed during recent demolition activities and are not considered and environmental concern for the Subject Property at this time.

6.0 REGULATORY INFORMATION

Federal, state, and tribal environmental regulatory information was provided by ERIS, an independent research firm, which completed an ASTM-compliant regulatory records search. This search was completed to ASTM-defined search distances; however, it should be noted that the distances searched may have been modified based on LaBella's experience due to the geology or nature of the area, as permitted under ASTM E1527-21. Additionally, ERIS conducted a search of supplemental Federal, state, tribal, and local databases to augment the ASTM-specified search; any relevant listings from these supplemental searches are summarized in the following sections. The ERIS report, dated July 24, 2025, is included in the Regulatory InformationAppendix.

The review of regulatory information was completed to evaluate the potential for environmental impact to the Subject Property, including contaminant migration from off-Subject Property locations. This evaluation included a review of regulatory records along with geologic/ hydrogeologic information, topographical information, and/or distance relative to the Subject Property.

6.1 Regulatory Report Summary

A complete list of the databases reviewed is included within the ERIS report. Below is a summary of the identified listings within their respective search distance:

Regulatory Report Summary

Database	Search Radius	Target Property	Within 0.12mi	0.12mi to 0.25mi	0.25mi to 0.50mi	0.50mi to 1.00mi	Total
RCRA LQG	0.25	1	0	1	-	-	2
RCRA VSQG	0.25	0	1	0	-	-	1
RCRA NON GEN	0.25	0	0	6	-	-	6
FED BROWNFIELDS	0.5	2	0	0	2	-	4

COOLING TOWERS	0.125	0	2	-	-	-	2

6.1.1 Subject Property Listings

The Subject/Greater Property was identified as follows:

- UST Facility (PBS No. 7-447072):

The following table summarizes the NYSDEC PBS Facility Information listing associated with the Subject Property:

Tank No.	Location	Capacity (gallons)	Product Stored	Tank Type	Secondary Containment	Date Installed	Status
001	Underground	2,000	Gasoline	Steel/ Carbon Steel/ Iron	Double-Walled (Underground)	February 1, 1986	Closed - Removed (September 1, 1998)
002	Underground	5,000	Diesel	Steel/ Carbon Steel/ Iron	None	December 1, 1970	Closed - In Place (September 1, 1997)

It should be noted that the USTs were located on the greater property and would be considered south adjacent.

- NY Spills site with the following releases:
    - Spill #8604795 involved petroleum found in a storm drain. A confirmatory sample indicated levels were less than 50 ppm PCBs. The material was taken to a landfill for disposal and the NYSDEC closed the spill on July 22, 1988.
    - Spill #9807337 involved soil contamination encountered during the removal of Tank 001. Approximately ten yards of pea stone were removed. Further testing was to be done upon completion of the tank removal. The spill was classified as inactive by the NYSDEC on October 31, 2003.
    - Spill #2304236 involved contamination identified at the Subject Property during supplemental Phase II reports by LaBella (Refer to Section 5.8). The property was in the process of being declared structurally unsafe and was scheduled for demolition in late 2023 or early 2024. No further pertinent information was available from the spill listing. The Spill has an active status.
- RCRA (ID No. NYD120538020) Non-Generator with violations that were returned to compliance on May 19, 2011. Wastes generated are listed as ignitable waste, reactive waste, and spent nonhalogenated solvents.
- FRS listing associated with inclusion in the RCRA and NCDB Programs

- Manifest listings associated with the RCRA generator. The facility transported ignitable waste, wastes containing PCBs, corrosive waste, chromium, mercury, barium, methyl ethyl ketone, PCE, TCE, cadmium, lead, benzene, and spent nonhalogenated solvents between 1986 and 2010.

- Federal Brownfields (ID #s 253171 and 253172): These listings are associated with a 2022 RBM Survey,

Based on the return to compliance of the violations, the status of the spills, and/or the location of the USTs on the southern adjacent property, there does not appear to be a REC in association with the regulatory record attached to the Subject Property other than in relation to Active Spill #2304236.

6.1.2 Adjacent Property Listings

The following regulatory listings associated with the northern adjacent property was identified:

Rosamond Gifford Zoo - 1 Conservation Place (north)

- AST Facility (PBS No. 7-601179): Three in-service ASTs

- NY Spills site with the following releases:

    - Spill #0106351 involved soil that found to have low level concentrations of fuel oil and gasoline compounds and is classified as inactive by the NYSDEC.

    - Spill #0212724 involved an equipment failure causing approximately five gallons of hydraulic oil to spill to the ground and is classified as inactive by the NYSDEC.

    - Spill #0910395 involved a contractor hitting a UST. The UST had been filled with stone and gravel. The UST was removed from the ground and a closure report was received by the NYSDEC on January 13, 2010. The spill is classified as inactive by the NYSDEC.

- Cooling Towers (ID #4088): The property has cooling towers registered with the NYSDEC associated with air conditioning.

Based on the nature and status of the spill listings, there does not appear to be a REC for the Subject Property in association with the adjacent regulatory listings at this time.

6.1.3 Additional Listings

Based on distance and presumed direction of groundwater flow, none of the other sites listed within the database report are considered likely to have current or former releases of hazardous substances and/or petroleum products with the potential to migrate to the Subject Property.

6.1.4 Unmappable Listings

Unmapped facilities were identified within the ERIS report. The specific location of these listings could not be determined due to incomplete or inaccurate address information. Based on the limited address information available for the listings, they do not appear to be associated with the Subject Property or adjacent properties.

6.2 Potential for Vapor Encroachment

As part of this study, LaBella completed a Tier I Vapor Encroachment Screen, as described in ASTM E2600-22, for the Subject Property in order to assess the potential for chemicals of concern and petroleum hydrocarbon chemicals of concern to migrate into the vadose zone of the subsurface as a result of contaminated soil and/or groundwater on or near the Subject Property. LaBella's Tier I Vapor Encroachment Screen included the review of historical, hydrogeological, and regulatory records, including the following standard environmental records sources:

Standard Environmental Records Sources	**Default Approximate Minimum Search Distance – Surrounding the Subject Property (miles)**	
	Chemicals of Concern	**Petroleum Hydrocarbon Chemicals of Concern**
Federal NPL site list	1/3	1/10
Federal CERCLIS list	1/3	1/10
Federal RCRA CORRACTS facilities list	1/3	1/10
Federal RCRA non-CORRACTS TSD facilities list	1/3	1/10
Federal RCRA generators list	Property only	Property only
Federal Institutional control/ engineering control registries	Property only	Property only
Federal ERNS list	Property only	Property only
State- and tribal-equivalent NPL	1/3	1/10
State- and tribal-equivalent CERCLIS	1/3	1/10
State and tribal landfill and/or solid waste disposal site lists	1/3	1/10
State and tribal leaking storage tank lists	1/3	1/10
State and tribal registered storage tank lists	Property only	Property only

State and tribal institutional control/engineering control registries	Property only	Property only
State and tribal Voluntary Cleanup sites	1/3	1/10
State and tribal Brownfield sites	1/3	1/10

Based on LaBella's review of regulatory, historical, and hydrogeological information and application of the Tier I Vapor Encroachment Screen criteria, the following is noted:

- A vapor encroachment condition is not anticipated to exist based on the results of previous on-site investigation activities and the lack of surrounding regulatory listings indicative of potential volatile contaminant migration onto the Subject Property.

6.3 Enforcement Action/Permitted Activities/Institutional Controls

No recorded enforcement actions or institutional controls were identified for the Subject Property during this Phase I ESA. It should be noted that an active spill has been identified for the Subject Property, related to previous subsurface investigation activities.

Provided Information indicates that the Subject Property is subject to PBS and RCRA environmental permit activities.

6.4 Regulatory Agency File and Records Review

The purpose of the regulatory file review is to obtain sufficient information to assist the Environmental Professional in determining if a recognized environmental condition, controlled recognized environmental condition, historical recognized environmental condition, de minimis condition, or significant data gap exists at the Subject Property in connection with the identified listings. Regulatory listings identified in the database report for the Subject Property and adjacent properties were evaluated in order to determine the need for a regulatory file review. Based on this evaluation, the following was concluded:

- As sufficient information was included within the ERIS report to determine if a REC exists, no file review was warranted.

6.5 Regulatory Information Summary

LaBella's review of regulatory information identified the following conditions indicative of the presence or likely presence of hazardous substances or petroleum products in, on, or at the Subject Property.

- The Subject/Greater Property was identified as a RCRA Non-Generator with no unresolved violations and as a Manifest Facility. Wastes generated and/or transferred from the Subject Property have included PCBs, various metals, PCE, TCE, corrosive, ignitable, and reactive wastes, and spent non-halogenated solvents. While there were no records of release reported, these listings are indicative of past use/storage/handling of various hazardous materials on the greater property.

- The Subject Property was identified as active NYSDEC Spill #2304236 involving contamination identified at the Subject Property during supplemental Phase II reports by LaBella (Refer to Section 5.8). The property was in the process of being declared structurally unsafe and was scheduled for demolition in late 2023 or early 2024. No further pertinent information was available from the spill listing. Based on the active status of the Spill, a REC has been identified.

7.0 INTERVIEWS

Interviews were completed with representatives of the owner/operator of the Subject Property, Subject Property occupants, neighbors, and/or former owners/operators, to the extent possible, to further assess Subject Property operations and/or potential environmental concerns. Notes from completed interviews are included in the Owner/Operator-Provided Information Appendix.

Additional information was obtained through federal, state, tribal, and/or local agencies or via the submission of Records Requests, as documented below.

7.1 Owner/Subject Property Representative

As of the date of this report, LaBella has not received a completed owner interview form.

7.2 Current Occupants

There are no currant occupants of the Subject Property; as such, no occupant interviews could be completed.

7.3 Former Owners/Operators/Occupants

No past owners/occupants/operators were contacted because no contact information was provided through available municipal records or through a focused online search.

7.4 Neighbors

The Subject Property is not an abandoned property; therefore, interviews with the neighboring property owners were not conducted.

7.5 Local Government Official

A FOIL request was submitted to the City of Syracuse Clerk, Patricia McBride on July 23, 2025 requesting copies of building department, assessment, and fire marshal records on file for the Subject Property. A complete response has not been received as of the date of this report. Relevant records obtained from a previous Phase I ESA are discussed in Section 5.5above. Copies of the FOIL request and any obtained records are included in the Municipal Information Appendix.

7.6 Local Fire Department

In LaBella's experience, records from the fire department that serves the Subject Property would be included in FOIL records obtained from the local government official, as noted in Section 7.5 above.

7.7 State Regulator

A FOIL request was submitted to the NYSDEC on July 23, 2025 for information regarding the Subject Property and adjacent and/or nearby properties suspected to pose a potential concern to the Subject Property based on a review of the database report and/or other regulatory records.

As of the date of this report submission, a complete response has not been received from the NYSDEC. A copy of the FOIL request is included in the Regulatory Information Appendix.

7.8 State and/or County Health Department

A FOIL request was submitted to the OCHD on July 23, 2025 for information regarding the Subject Property.

According to a response received on July 30, 2025, no records could be located for the names and addresses provided. A copy of the FOIL request is included in the Regulatory Information Appendix.

7.9 Summary of Interviews

LaBella's interviews and/or review of provided records did not identify conditions indicative of the presence or likely presence of hazardous substances or petroleum products in, on, or at the Subject Property unless discussed elsewhere in this report.

8.0 ADDITIONAL SERVICES/ASTM NON-SCOPE CONSIDERATIONS

8.1 Emerging Contaminants

Hazardous substances are those defined as such pursuant to CERCLS 42 U.S.C. § 9601(14), as interpreted by USEPA regulations and the courts. There are some substances that others may assume to be classified as hazardous substances that are in fact not defined (or not yet defined) as hazardous substances under CERCLA through interpretation by USEPA regulations.

These and any other "emerging contaminants," where they are not identified as a hazardous substance by CERCLA, as interpreted by USEPA regulations and the courts, are not included in the scope of E1527-21. Some of these substances may be considered a "hazardous substance" (or equivalent) under applicable state laws. In those instances, where a Phase I ESA is performed to satisfy both federal and state requirements, or as directed by the user of the report, it is permissible to include analysis and/or discussion of these substances in the same manner as any other Non-Scope Consideration. If and when such emerging contaminants are defined as hazardous substances under CERCLA, as interpreted by USEPA regulations and the courts, such substances shall be evaluated within the scope of ASTM E1527-21.

No information was provided indicating emerging contaminant impacts to groundwater in the area of the Subject Property; however, LaBella notes that no laboratory results for emerging contaminant analysis were provided for review.

9.0 FINDINGS AND OPINIONS

LaBella has been contracted by Albanese Development Corporation to perform a Phase I ESA report for the Former Syracuse Developmental Center property, 800-802 South Wilbur Avenue, Syracuse, Onondaga County, New York.

This assessment was prepared according to the ASTM E1527-21 as a portion of the User's requirements in the All Appropriate Inquiries process and to satisfy the due diligence requirements set for Albanese Development Corporation.

The Subject Property is further described in Section 2.0 while the history of the Subject Property is summarized in Section 5.9.

Based on the results of this assessment, the following REC has been identified in connection with the Subject Property:

- Based on the records reviewed, an oil house, paint/printing shop, greenhouses, and carpentry shop were located on the Subject Property at various times between at least 1911 and 1967, prior to development of the Greater Syracuse Development Center, which was built in 1970-1971 and was recently demolished. It is likely that solvents, paints, cleaning chemicals, and other hazardous materials and/or petroleum products were utilized and stored at these areas and other areas of the Subject Property; material handling practices are unknown. Additionally, the Subject/Greater Property had been identified as a RRA Non-Generator and Manifest facility; wastes generated and/or transferred from the Subject Property have included PCBs, various metals, PCE, TCE, corrosive, ignitable, and reactive wastes, and spent non-halogenated solvents Several investigations have been conducted on the Subject Property between 2008 and 2025.

  As a result of the investigations, select metals, pesticides and SVOCs had been identified sporadically throughout the Subject Property in soil at concentrations exceeding Unrestricted Use Soil Cleanup Objectives (SCOs). SVOCs have been detected in soil at concentrations exceeding Restricted Residential Use SCOs and in groundwater at concentrations exceeding TOGS 1.1.1 groundwater standards; however, based on the nature of these compounds, the elevated concentrations in groundwater are likely attributed to high turbidity and may not be representative of dissolved concentrations. The heavy metal and pesticide impacts are generally limited to shallow soils and may be the result of atmospheric deposition and/or historical operations at the property. The SVOC impacts are generally deeper and may be the result of historical filling.

  As a result of the investigations, NYSDEC Spill #2304236 was opened for the Subject Property associated with the limited on-site contamination identified. The Spill has an active

status. As such, this represents a REC. Future planned development and excavations may encounter limited impacts that may require excavated material to be handled/managed in accordance with NYSDEC Part 360 regulations as urban fill is considered by the NYSDEC to be a solid waste that cannot be treated as Construction and Demolition solid waste.

LaBella recommends that an Environmental Management Plan be developed for the Subject Property to outline procedures for the proper identification and management of known or unknown impacted materials which could be encountered during future earthwork and construction at the Subject Property (e.g., utility maintenance, redevelopment, etc.). The Environmental Management Plan would include implementation and environmental oversight on an as needed basis during earthwork as suspect materials or impacts are identified and include guidance for the segregation of excavated materials, if needed.

Based on the results of this assessment, no CRECs, HRECs, de minimis conditions, or significant data gaps have been identified in connection with the Subject Property.

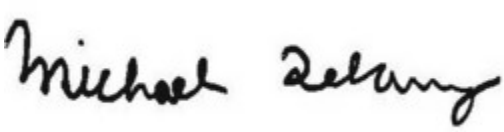
While not considered a REC, CREC, HREC, de minimis condition, or significant data gap, LaBella also notes the following:

- Previous reports identified limited staining related to chemical storage in the former Syracuse Developmental Center Building and also identified evidence (vent pipes) of an AST that was likely historically located within the former building. Additionally, areas of solid waste disposal, including household debris, was previously noted on-site. These items appear to have been addressed during recent demolition activities and are not considered and environmental concern for the Subject Property at this time.
- Pole-mounted transformers were observed along the eastern boundary of the Subject Property; no evidence of a release from this equipment was noted.
- Evidence of fill material (soil and gravel piles) associated with construction activities was observed on the eastern portion of the Subject Property. No leaks, stains, spills, or unusual odors were noted in the vicinity of the fill material at the time of the site visit.

9.1 Additional Investigation

Based on the findings of this assessment, no additional investigation is warranted at this time. However, LaBella recommends that an Environmental Management Plan be developed for the Subject Property to outline procedures for the proper identification and management of known or unknown impacted materials which could be encountered during future earthwork and construction at the Subject Property (e.g., utility maintenance, redevelopment, etc.).

The Environmental Management Plan would include implementation and environmental oversight on an as needed basis during earthwork as suspect materials or impacts are identified and include guidance for the segregation of excavated materials, if needed.



10.0 CONCLUSIONS

LaBella has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 for 800-802 South Wilbur Avenue, Syracuse, New York, the Subject Property. Any exceptions to, or deletions from, this practice are described in Section 1.4of this report.

This assessment has revealed the following recognized environmental conditions, controlled recognized environmental conditions, or significant data gaps in connection with the Subject Property:

- REC associated with active NYSDEC Spill for the Subject Property associated with slight exceedances identified in soil and groundwater during Phase II Investigations.

This report constitutes the findings of LaBella's investigation conducted for the Subject Property as written and reviewed by the following personnel:

Michael Delaney
Senior Environmental Analyst

Dave Crandall
Phase I Program Manager

11.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of 40 C.F.R. § 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

Dave Crandall
Phase I Program Manager
Environmental Professional

Site Reconnaissance Worksheet

Subject Property Name	Project Number	Inspector Name	Site Visit Date
Updated phase I ESA	2224176	Chris Putzer	7/29/25
Address, City, County, State	800 South Wilbur Ave, Onondaga, Syracuse, NY		
Acreage: 8.58	Topography: Hilly sloping downwards to the south		
On-site water bodies: N/A	Nearest water body/direction:		
Nature of Area (circle one): Rural (Urban) Suburban			
Additional Roadways			
Accompanied By: Unescorted	Title:	Years associated with Subject Property:	
Current Use list all occupants and describe nature of operations	Post demolition vacant lot to be redeveloped into appartment Buildings. No Buildings on site. Perimeter driveway partially in tact		
Past Use (If evident during site visit)			

Utilities

Electric: Public – Provider National Grid
Natural Gas: Y / N – Provider National Grid
Water supply type: Public (Provider municipal) or Private (Well location(s): N/A
Sewer/~~Septic~~: Public (Provider municipal) or Private
Septic tank/field location(s): N/A
Storm Drains (Y) N if yes, location: in driveways on site. Storm water drains on property
Drainage location (public system), pond, ditch/channel, dry well, surface) line on Wilbur Ave

Site visit limitations:

☐ Dense vegetation ☐ Topography ☐ Snow ☐ Parked vehicles ☐ Stored Materials

☒ ~~Unaccompanied during site inspection~~

☐ Inaccessible structures/areas (list): _____

☐ Other: _____

No Buildings on Site

Site Reconnaissance Worksheet

Hazardous Substances/Petroleum Products (request SDS)

Contents/Container Size	No. of Containers	Location	Use/Purpose	Staining/Evidence of a Release
General cleaning and property maintenance supplies/five-gallons or less				Y / N
Propane tanks	2 - 15 pound tanks	West of Job trailer on pallet	construction	Y / (N)
Used hydraulic oil	4 55-gallon drums 6 5-gallon Buckets	Just South of main entrance on pallets	Construction waste staged for disposal	Y / (N)
hydraulic oil	3 - 5-gallon Buckets 2 55-gallon drums	in Conex Box in East parking lot	Construction heavy machine lube	Y / (N)
				Y / N

Solid, Hazardous, and/or Regulated Wates (request recent disposal receipts)

Material	Source/Process	Storage Location/Quantity	Transporter/Hauler	Staining/Evidence of a Release
General refuse/recyclables				Y / N
Scrap metal	Demolition	Roll off dumpster on East side of site		Y / (N)
Waste cooking grease				Y / N
Waste oil	Construction	See above		Y / (N)
Additional waste automotive fluids				Y / N
Waste manufacturing liquids/solids				Y / N
Waste solvents/cleaners				Y / N
Waste paints/thinners				Y / N
Other: Used oil filters Used tires Used batteries Used rags				Y / N

Parts washer: Y / (N) If yes, location:_____ service provider:_____

LaBella

Site Reconnaissance Worksheet

Additional Wastes/Disposed Materials:

Material	Source/Process	Storage Location/Quantity	Staining
Fill dirt/material	Construction	East side of site west of job trailer	Y / (N)
Construction and demolition wastes			Y / N
Discarded materials/containers			Y / N
Gravel/stone piles			Y / N
Other (i.e. slag)			Y / N

Unidentified Substance Containers:

Description of Container	Location	Staining/Evidence of a Release
		Y / N
		Y / N
		Y / N

Suspect PCB-Containing Equipment:

Type	#	Location	Leaks?
Pole-mounted Transformers	1	East side of site along South utility line East of driveway	Y / (N)
Pad-mounted transformers			Y / N
Aboveground hydraulic lifts			Y / N
In-ground hydraulic lifts			Y / N
Elevators			Y / N
Compactors			Y / N

Site Reconnaissance Worksheet

Storage Tanks

No./Type (AST/UST)	Location (tank and vent/fill)	Capacity (gallons)	Construction (steel, FRP)	Contents	Installation Date/Age	Staining or Evidence of a Release
1/AST	West of Job trailer on wood pallet (Cradle tank)	~100 gal	Steel	DEF Road Diesel	Temporary for construction	NO
2/AST	South of Job trailer on the Eastern side of site	500 gal	Steel with built in spill containment	Non-Highway Diesel Fuel	Temporary for construction	NO

Evidence of prior tanks (e.g., cut pipes, old vent pipes, patched asphalt and/or concrete, signage, inactive pump island or canopy, etc.):

No

Request the following documents:

- System Status Report/Print-out (from tank monitoring system)
- Tank Closure Reports
- Tank Installation Documents
- PBS/CBS registration
- Testing Documents (tightness, lines, leak detection, etc.)
- Spill Reports

Additional Notes (e.g., location of dispensers):

dispensers are attached directly to the AST's

Site Reconnaissance Worksheet

Additional Observations

Observation	Yes/No	Location	Notes (poor housekeeping, staining, releases, etc.)
Odors	Y / (N)		
Standing water/pools of liquid	(Y) / N	East side of construction site	Small puddle, no staining
Evidence of former lifts (lift scars, patching, etc.)	Y / (N)		
Patching (in concrete, asphalt, etc.)	Y / (N)		most asphalt has been milled and removed
Additional Stains and Corrosion	Y / (N)		
Stressed Vegetation	Y / (N)		
Non-sanitary wastewater	Y / (N)		
Septic System and/or Cesspools	Y / (N)		
Wells (including monitoring, irrigation, dry wells, underground injection wells)	Y / (N)		
Air Emissions/Exhaust/SSDS systems	Y / (N)		
Additional observations of note	~~Water transfer station~~ in Water Vault on East side of site scheduled to be demolished and removed area is free of staining, No stressed vegetation or odors in connection to vault		

Dry Cleaning: Y / (N)

Length of operations:

Number and type of machine(s) used, location:

Cleaners/solvents used: _____ Storage location: _____

Wastes generated: Y / N Storage location: _____

Spot cleaning: Y / N

X-Ray and/or Film Developing: Y / (N) **Digital X-Rays:** Y / (N)

Length of operations:

Silver-recovery system: Y / N If yes, discharge location _____

Previous discharges to septic system: Y / N

RE: CITY DIRECTORY RESEARCH
800-802 South Wilbur Avenue
Syracuse,NY 13204

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:
200-250 of Coleridge Avenue
600-800 of Delaware Street
300-650 of Grand Avenue
200-650 of South Geddes Street
500-850 of South Wilbur Avenue

Date Wed 7/23/2025 2:45 PM
To Delaney, Michael <mdelaney@labellapc.com>

Label1

Dear Requestor,

Thank you for submitting a request for records on Wednesday, July 23, 2025. Within five business days of the receipt of this written request for a record reasonably described, we will provide an acknowledgment letter with an estimate of when the records you requested will be available, which shall be reasonable under the circumstances of the request. Generally, the approximate completion date is 20 business days from the date of acknowledgement, but the date may vary depending on numerous factors. This date is determined by the number of documents you request, their format, their availability, the time it takes to assemble the documents, the time it takes to review and redact any information that cannot be disclosed pursuant to FOIL, and other factors.

Your request reference number is Request Number: FOILReference2025-1982 and your security key is F58767A0.

Please have both reference numbers available when communicating with our staff regarding your request.

RE: Complaint #2018-00869 at 800 Wilbur Ave S Rear

PLEASE TAKE NOTICE that the property listed above has been inspected by Ryan Shiel and found to be in violation of the law. Attached is a list containing a description of each violation, the specific law and/or ordinance violated, and the time within which each violation must be corrected.

The property will be re-inspected when the correction date has passed. If the violations are not corrected, the City of Syracuse will take legal action to compel compliance, including the imposition of financial penalties. For each inspection performed past the correction date, a fee may be added to the real property taxes of the premises accordingly: one-family: $45.00, two-family: $55.00, mixed-use and multiple dwellings: $55.00 plus $20.00 per unit. The City also reserves the right to correct the violation and charge the associated costs to the owner.

The owner has the right to an administrative hearing by calling (315) 448-8695. This hearing must be requested by the owner within the shortest time period given to correct any violations.

If the violations are corrected, the owner or agent must schedule a re-inspection with the Division of Code Enforcement by calling (315) 448-8695. The hours of operation are 8:00 am to 5:00 pm, Monday through Friday.

The City of Syracuse would like to work with you to resolve this matter. Please contact the Division of Code Enforcement at (315) 448-8695 to speak with the inspector.

Sincerely,

Ryan Shiel
Code Enforcement Officer

CITY OF SYRACUSE, N.Y.
DIVISION OF CODE ENFORCEMENT

OUTSTANDING VIOLATIONS AS OF 01/12/2018

Property Address: 800 Wilbur Ave S Rear **Complaint #**2018-00869

The City of Syracuse has determined the following are violations of the New York State Uniform Fire Prevention and Building Code and/or Syracuse Property Conservation Code and must be corrected within the timeframe provided.

Violation Date: 01/12/18
Comply By Date: 1/12/2018
Code: 2015 International Property Maintenance Code\Chapter 3 - General Requirements\Section 304 - Exterior Structure\2015 IMPC - 304.1.1 - Unsafe Conditions
Description: Conditions 1 - 13 under Section 304.1 of the 2015 International Property Maintenance Code shall be determined as unsafe and shall be repaired or replaced to comply with the International Building Code or the International Existing Building Code as required for existing buildings.
Area Involved: Roof on all the buildings
Corrective Action: Fix or replace the roof and soffit area on all the buildings
Issued To: Syracuse Center, LLC

Violation Date: 01/12/18
Comply By Date: 1/12/2018
Code: 2015 International Property Maintenance Code\Chapter 3 - General Requirements\Section 304 - Exterior Structure\2015 IMPC - 304.10 - Stairways, Decks, Porches and Balconies
Description: Every exterior stairway, deck, porch and balcony, and all appurtenances attached thereto, shall be maintained structurally sound, in good repair, with proper anchorage and capable of supporting the imposed loads.
Area Involved: all the buildings on the campus
Corrective Action: All Stairs need to be fixed or repalced
Issued To: Syracuse Center, LLC

Violation Date: 01/12/18
Comply By Date: 1/12/2018
Code: 2015 International Property Maintenance Code\Chapter 3 - General Requirements\Section 304 - Exterior Structure\2015 IMPC - 304.11 - Chimneys and Towers
Description: Chimneys, cooling towers, smoke stacks, and similar appurtenances shall be maintained structurally safe and sound, and in good repair. Exposed surfaces of metal or wood shall be protected from the elements and against decay or rust by periodic application of weathercoating materials, such as paint or similar surface treatment.
Area Involved: open area in buildings
Corrective Action: Fix or replace the chimneys on all the buildings
Issued To: Syracuse Center, LLC

Violation Date: 01/12/18
Comply By Date: 1/12/2018
Code: 2015 International Property Maintenance Code\Chapter 3 - General Requirements\Section 304 - Exterior Structure\2015 IMPC - 304.12 - Handrails and Guards
Description: Every handrail and guard shall be firmly fastened and capable of supporting normally imposed loads and shall be maintained in good condition.
Area Involved: Handrails all the buildings
Corrective Action: Fix or replace the handrails on all the buildings
Issued To: Syracuse Center, LLC

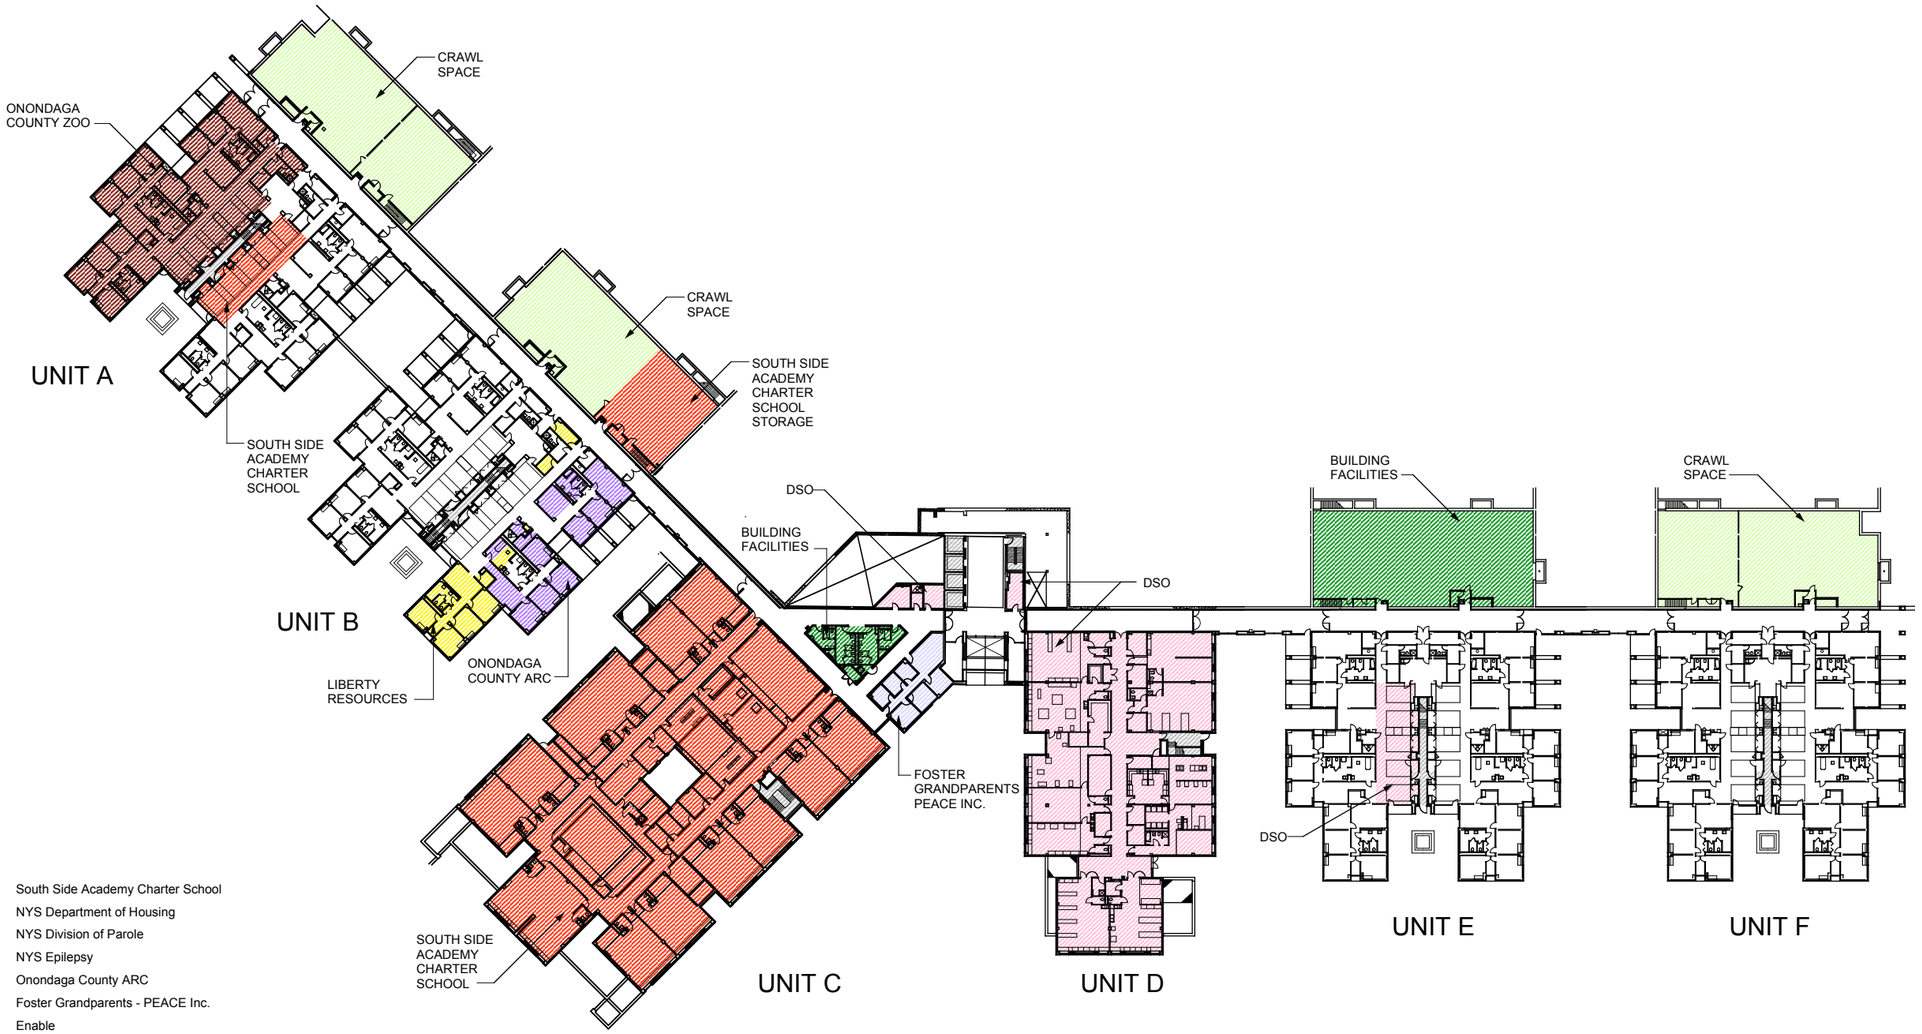
Violation Date: 01/12/18
Comply By Date: 1/12/2018
Code: 2015 International Property Maintenance Code\Chapter 3 - General Requirements\Section 304 - Exterior

Structure\2015 IMPC - 304.13 - Window, Skylight and Door Frames
Description: Every window, skylight, door and frame shall be kept in sound condition, good repair and weather tight
Area Involved: Windows on all the buildings
Corrective Action: Fix or replace all WINDOWS on all the buildings
Issued To: Syracuse Center, LLC

Violation Date: 01/12/18
Comply By Date: 1/12/2018
Code: 2015 International Property Maintenance Code\Chapter 3 - General Requirements\Section 304 - Exterior Structure\2015 IMPC - 304.18 - Building Security
Description: Doors, windows or hatchways for dwelling units, room units or housekeeping units shall be provided with devices designed to provide security for the occupants and property within.
Area Involved: Roof on all the buildings
Corrective Action: Fix or replace the roof and soffit area on all the buildings
Issued To: Syracuse Center, LLC

Violation Date: 01/12/18
Comply By Date: 1/12/2018
Code: 2015 International Property Maintenance Code\Chapter 3 - General Requirements\Section 304 - Exterior Structure\2015 IMPC - 304.18.1 - Door Security
Description: Doors providing access to a dwelling unit, rooming unit or housekeeping unit that is rented, leased or let shall be equipped with a deadbolt lock designed to be readily openable from the side from which egress is to be made without the need for keys, special knowledge or effort and shall have a minimum lock throw of 1 inch (25 mm). Such deadbolt locks shall be installed according to the manufacturer’s specifications and maintained in good working order. For the purpose of this section, a sliding bolt shall not be considered an acceptable deadbolt lock
Area Involved: Doors on all the buildings
Corrective Action: Fix or replace the Doors on all the buildings
Issued To: Syracuse Center, LLC

Violation Date: 01/12/18
Comply By Date: 1/12/2018
Code: 2015 International Property Maintenance Code\Chapter 3 - General Requirements\Section 304 - Exterior Structure\2015 IMPC - 304.18.2 - Window Security
Description: Operable windows located in whole or in part within 6 feet (1828 mm) above ground level or a walking surface below that provide access to a dwelling unit, rooming unit or housekeeping unit that is rented, leased or let shall be equipped with a window sash locking device
Area Involved: Roof on all the buildings
Corrective Action: Fix or replace the roof and soffit area on all the buildings
Issued To: Syracuse Center, LLC



Violation Date: 01/12/18
Comply By Date: 1/12/2018
Code: 2015 International Property Maintenance Code\Chapter 3 - General Requirements\Section 304 - Exterior Structure\2015 IMPC - 304.2 - Protective Treatment
Description: Exterior surfaces, including but not limited to, doors, door and window frames, cornices, porches, trim, balconies, decks and fences, shall be maintained in good condition. Exterior wood surfaces, other than decay-resistant woods, shall be protected from the elements and decay by painting or other protective covering or treatment. Peeling, flaking and chipped paint shall be eliminated and surfaces repainted. Siding and masonry joints, as well as those between the building envelope and the perimeter of windows, doors and skylights, shall be maintained weather resistant and water tight. Metal surfaces subject to rust or corrosion shall be coated to inhibit such rust and corrosion, and surfaces with rust or corrosion shall be stabilized and coated to inhibit future rust and corrosion. Oxidation stains shall be removed from
exterior surfaces. Surfaces designed for stabilization by oxidation are exempt from this requirement.
Area Involved: Areas on all the buildings
Corrective Action: Must paint area on all the buildings
Issued To: Syracuse Center, LLC

Violation Date: 01/12/18
Comply By Date: 1/12/2018
Code: 2015 International Property Maintenance Code\Chapter 3 - General Requirements\Section 304 - Exterior Structure\2015 IMPC - 304.4 - Structural Members
Description: Structural members shall be maintained free from deterioration, and shall be capable of safely supporting the imposed dead and live loads.
Area Involved: Structural area on all the buildings
Corrective Action: Fix or replace all areas on all the buildings
Issued To: Syracuse Center, LLC

Violation Date: 01/12/18
Comply By Date: 1/12/2018
Code: 2015 International Property Maintenance Code\Chapter 3 - General Requirements\Section 304 - Exterior Structure\2015 IMPC - 304.6 - Exterior Walls
Description: Exterior walls shall be free from holes, breaks, and loose or rotting materials; and maintained weatherproof and properly surface coated where required to prevent deterioration.
Area Involved: Walls on all the buildings
Corrective Action: Fix or replace exteriors area on all the buildings
Issued To: Syracuse Center, LLC

Violation Date: 01/12/18
Comply By Date: 1/12/2018
Code: 2015 International Property Maintenance Code\Chapter 3 - General Requirements\Section 304 - Exterior Structure\2015 IMPC - 304.7 - Roofs and Drainage
Description: The roof and flashing shall be sound, tight and not have defects that admit rain. Roof drainage shall be adequate to prevent dampness or deterioration in the walls or interior portion of the structure. Roof drains, gutters and downspouts shall be maintained in good repair and free from obstructions. Roof water shall not be discharged in a manner that creates a public nuisance.
Area Involved: Roof on all the buildings
Corrective Action: Fix or replace the roof and soffit area on all the buildings
Issued To: Syracuse Center, LLC

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

D008: LEAD (Waste Code Description from EPA Hazardous Waste Identification)

Waste Amounts By Year:

2010: 25 Pounds

Manifest Information

Waste Code(s):

D008: LEAD (Waste Code Description from EPA Hazardous Waste Identification)

Waste Amounts By Year:

1989: 9200 Pounds

Manifest Information

Waste Code(s):

F003: (Generic) The following spent nonhalogenated solvents: xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent nonhalogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above nonhalogenated solvents, and a total of 10 percent or more (by volume) of one or more of those solvents listed in F001, F002, F004 and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I)*

Waste Amounts By Year:

1991: 110 Gallons

Manifest Information

Waste Code(s):

B003: (Wastes containing polychlorinated biphenyls (PCBs)) Petroleum oil or other liquid containing 500 ppm or greater of PCBs.

Waste Amounts By Year:

1988: 38120 Pounds

Manifest Information

Waste Code(s):

B001: (Wastes containing polychlorinated biphenyls (PCBs)) PCB oil (concentrated) from transformers, capacitors, etc.

Waste Amounts By Year:

1988: 32440 Pounds

Manifest Information

Waste Code(s):

B007: (Wastes containing polychlorinated biphenyls (PCBs)) Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

Waste Amounts By Year:

1988: 1150 Pounds; 150 Pounds

Manifest Information

Waste Code(s):

D002: CORROSIVE WASTE (Waste Code Description from EPA Hazardous Waste Identification)

Waste Amounts By Year:

2009: 800 Pounds; 160 Pounds; 10 Pounds
2010: 25 Pounds; 35 Pounds; 300 Pounds; 300 Pounds

Manifest Information

Waste Code(s):

D007: CHROMIUM (Waste Code Description from EPA Hazardous Waste Identification)

Waste Amounts By Year:

1993: 300 Pounds

Manifest Information

Waste Code(s):

D009: MERCURY (Waste Code Description from EPA Hazardous Waste Identification)

Waste Amounts By Year:

Caller Remark:

"Contamination on really old site. Deep into the soil 7/8 foot and low level. C/U pending.. he doesnt believe t required."

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

DEC Remark:

"08/16/2023 PER EMAIL from Tom Fucillo ... supplemental phase II reports by LaBella, on behalf of the contract purchaser of the site. The property is owned by the City of Syracuse and has been vacant for about 10 years. The current building was built by the state in the early 1970s, but it had been a center for the developmentally disabled owned and operated by various state agencies since the early 20th century. The property has been or is in the process of being declared structurally unsafe by the City Fire Marshall and is expected to be scheduled for demolition late this year or early next year (after the bid process is completed). Phase 2 and supplemental phase 2 received with this email."

Caller Remark:

"Region 7 Dick Brazell is aware of this report. New sewer being drilled, found oil in soil on site of old RR."

DEC Remark:

"5/7/2010 - (matt Romocki)Inspected site. 1K tank being removed from ground. The tank is very old and was discovered while assessing for new storm sewer project. Abscope and C&S Engineers(Rory Woodmansee) doing work for Onondaga County (Thomas Tokaryk). No gross contamination observed as tank was removed. Closure report to be forwarded. 7/1/2010- C&S requested Emergency Hauler Permits for JJ Lane to move petroleum contaminated soil to a staging area at Fowler High School. 7/13/2010 UST was just discovered along the Harbor Brook Corridor. The discovery is located in the baseball field, between Fayette Street and the construction dewatering frac tank/treatment system the tank is 8 foot diameter and at least 20ft long (the other end has not been found)The UST appears to be half full with what was described as smelling like gasoline.No spill is evident. Three more USTS were located after this initial tank. 8/15/11 - Another UST has been found near the intersection of Geddes Street and Seymore Street. It was found as part of the new storm sewer installation for the high school addition project. Historty indicates that it maybe the site of a former gas station. Abscope was on site today to clean the tank. Photos taken. Tank appears to be 4k gallons. Some piping was also uncovered when the tank was uncovered for cleaning. Contractor was advised that the pipes must be removed when the tank is removed. Samples to be collected from the excavtion after tank is removed."

Site Class Desc:	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Site Class Desc (Web):	
Site Class Desc (Geo):	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Assess DOH:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.
Data Source:	DEC Environmental Remediation Database Search - Remedial Site Search (Web); Environmental Remediation Sites; Remedial GIS (GIS); DEC Remediation Sites Boundaries (Geo)

Description:

Location The Site is located on the west side of the City of Syracuse. Harbor Brook flows through the Site within a box culvert located beneath the eastern portion of the Site. Onondaga Creek is 0.76 miles east of the Site and Onondaga Lake is 1.25 miles northwest. The Site is bounded to the north by West Fayette Street followed by forested land, Syracuse City School District Supply Center, and a rail line, to the south by commercial stores and George Fowler High School, to the west by residences and the George Fowler High School baseball diamond, and to the east by another BCP Site (Lofts at 1117) and commercial stores. Properties surrounding the Site are a mix of commercial and industrial in nature. Site Features The site is developed with a 92,113 square foot six-story building with an adjoining 11,060 square foot single story building. The buildings were historically used for manufacturing purposes but have most recently been used as mixed office space, storage space, and commercial space. An oil house (located on the west side of the building) and an exterior coal silo (located on the south side of the building) were identified on historic maps. The oil house has since been replaced with the western addition to the building. The coal silo remains on the Site. Railroad spurs were historically present on the south side of the Site from at least 1911 until at least 1990. The Site is located at approximately 398 feet above mean sea level (amsl) and slopes slightly to the southwest. Current Zoning and Land Use The Site is currently zoned for Mixed-Use Transition (MX-3) under the City of Syracuse's City Zoning Ordinance (March 2023). The Site's current Land Use is manufacturing and processing per Onondaga County GIS. The properties surrounding the Site are zoned for a combination of Mixed-Use Transition (MX-3), Urban Core (MX-4), Light Industry and Employment (LI), and Small Lot Residential (R1). The properties surrounding the Site have a combination of land uses including commercial, industrial / utility, residential, and public service uses. Past Use of the Site The Site was occupied by residential houses, a machine shop, and a lumber shed from at least 1892. Around 1911, the Site began operating as the Kemp & Burpee Manufacturing Company, a large manufacturing facility that produced manure spreaders. These operations included a machine shop, a forge shop, and several painting shops on and near the eastern side of the Site. In the mid-1900s (sometime between 1938 and 1951), the Kemp & Burpee manufacturing facility was demolished and the six-story industrial building with a single-story addition that exists today was constructed on the western portion of the Site. Between 1956 and 1960, a single-story addition was added to the western side of the buildings. The eastern portion of the Site operated as a parking lot. The industrial facility operated as the Morris Distributing Company (wholesale electrical supplies) between approximately 1951 and 1988. This operation was equipped with an oil house that was located on the west side of the original structure, in an area that is now occupied by the western addition. A coal silo was also present outside the south side of the building dating to at least 1951. The coal storage structure still remains on the Site. In the 1990s, the facility housed a variety of industrial and commercial companies including Command Services (computer sales and services), Tegmen (electronic circuit manufacturer), Selco Graphics (printing), and PEACE Inc (non-profit organization). Since the early 2000s, a variety of commercial tenants have occupied the facility. Site Geology and Hydrogeology The Site contains historic fill material across a significant portion of the Site from grade to approximately six to nine feet bgs generally, with at least one location to eleven feet bgs. Native soil is located below the fill and consists of dark brown fine to coarse sand and silty clay. Depth to groundwater is 9 to 14 feet bgs across the site and is assumed to move generally to the north in the direction of Harbor Brook's flow.

Assessment:

Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Caller Remark:

"Caller claims thats Hobs drains auto fluids on to the ground and washes the waste into a storm drain located in the parking lot"

DEC Remark:

"From tax research: Property owners JT Property P.O. Box 138 Nedrow NY 13120 On site mechanic Steven Bohemier, cousin of bis owner Todd Hobbs (not on site) Also spoke with Corey Dunn, mechanic. slight sheen in water in catch basin, surrounding pavement wet with sheen. unknown where catch basin discharges too. Inside floor drains have water and oils. Also unknown where discharge to. Told bohemier and dunn to not allow any more oils to enter drains. They will contact landlord to choose option of containment, concrete or spdes. Bohemier will have his cousin who works for safety clean, clean out catch basins and provide receipts (by 11/2) and will provide contact information for landlord. ~ctr~"

County:	Onondaga		

Contributing Factor: Equipment Failure
Reported by: Fire Department
Referred to:
Source: Gasoline Station or other PBS Facility
Report Source: NYSDEC - Environmental Remediation Data Files - Spill Data

Caller Remark:

"pavement only affected - station will not shut down pump that is leaking"

DEC Remark:

"PER FD LARGE SPILL TO PAVEMENT CAUSED BY LEAKING HOSE AND DISPENSER THAT MANAGER REFUSES TO SHUT OFF. PULLED DISPENSER SKIRT WITH FD AND PETROLEUM VENDOR, OBSERVED MOIST SINGLE WALL PIPING ON DISP 1/2 BENEATH REGULAR LINE. TRIPPED SHEAR VALVE TO STOP FLOW OF PRODUCT THROUGH PIPNG. OPERATOR TO HAVE VENDOR FIX PIPING, AND CONDUCT LTT, PLLD TEST, AND TTT PER PBS INSPECTION FINDINGS CONDUCTED AT TIME OF SPILL. SEE 3/2/2012 NOV IN PBS INSPECTION FILES. Tanks, lines, and pllds tested Ok. Leak was from metering and mixing equipment in dispenser piping. No dispenser sumps, so small amount of gas leaked to soil. Spill closed, and will address contamination with PBS NOV."

Site Class Desc:	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not

yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.

Site Class Desc (Web):

Site Class Desc (Geo): Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.

Assess DOH: The site is vacant therefore, people are not expected to come into contact with site related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. Furthermore, environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Data Source: DEC Environmental Remediation Database Search - Remedial Site Search (Web); Environmental Remediation Sites; Remedial GIS (GIS); DEC Remediation Sites Boundaries (Geo)

Description:

Location: The Lofts at 1117 site (site) is a 0.46-acre property located in the Syracuse Westside community. The site is bounded to the north by West Fayette Street, to the south by a shopping plaza, to the east by a multi-tenant commercial building, and to the west by a parking lot (see Figure 1). Site Features: The site is relatively flat and contains two buildings connected by a second-story bridge. Both buildings were constructed in approximately 1900. Each building is three stories high and consist of brick-and-mortar construction. The total combined building space is approximately 29,063 square feet and both buildings are currently vacant. A drum and tank storage room is located in the southwestern corner of the southern building. The storage room contained several 5-gallon and 55-gallon drums as well as a bulk storage tank of heating oil. The remainder of the site consists primarily of asphalt pavement. Current Zoning and Land Use: The site and all adjoining sites are currently in a Class A Industrial District. The properties surrounding the site are currently used for commercial purposes and the site is currently vacant. Past Use of the Site: The site was originally developed for industrial purposes in 1900. Historical site uses include manure spreader manufacturing, gear manufacturing, hat manufacturing, toy manufacturing, screw-type machining, printing, and painting. Two historic spills occurred directly in front of the site along Fayette Street. Both spills were associated with vehicle crashes into nearby transformer poles and both spills were properly closed. Site Geology and Hydrogeology: The site is approximately 395 feet above mean sea level. The depth to groundwater ranges between 8 and 14 feet bgs and generally flows north-northwest towards Harbor Brook located approximately 250 feet from the site. The site contains historic fill material across a significant portion of the site from grade to a maximum depth of 9.5 feet bgs. Native soil located beneath the fill consists of fine silty clay and fine silty sand down to 12 feet bgs. It is then followed by a medium to coarse sand. Bedrock was not encountered at the soil depths sampled down to 20 feet. A site location map is attached as Figure 1.

Assessment:

Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Sub-slab soil vapor, indoor air, and outdoor air samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern include SVOCs and metals in soil and SVOCs and PFAS in groundwater. Soils: SVOCs detected at concentrations exceeding the protection of groundwater soil cleanup objectives (PGSCOs) occurred in four surface soil samples and four subsurface samples throughout the site and included: benzo(a)anthracene at a maximum concentration of 17 parts per million (ppm) (PGSCO 1.0 ppm), benzo(a)pyrene at a maximum concentration of 17 ppm (PGSCO 22 ppm), benzo(b)fluoranthene at a maximum concentration of 19 ppm (PGSCO 1.7 ppm), benzo(k)fluoranthene at a maximum concentration of 5.8 ppm (PGSCO 1.7 ppm), Chrysene at a maximum concentration of 16 ppm (PGSCO 1.0 ppm), and Indeno(1,2,3-cd)pyrene at a maximum concentration of 8.4 ppm (PGSCO 8.2 ppm) One SVOC, dibenzo(a,h)anthracene was detected in five samples a concentration exceeding Restricted Residential Soil cleanup objectives (RRSCOs) with a maximum concentration of 2.4 ppm (RRSCO 0.33 ppm). Perfluorooctanoic acid (PFOA) was detected in one soil sample above PGSCOs with a maximum concentration of 0.983 parts per billion (ppb) compared to the PGSCO of 0.8 ppb. Perfluorooctanesulfonic acid (PFOS) was not detected in concentrations exceeding the PGSCO. Several metals were detected at concentrations exceeding RRSCOs in four surface and 29 subsurface soils throughout the site, most notably mercury in the eastern portion of the site with a maximum concentration of 16.4 ppm (RRSCO 0.81 ppm). Lead was found in concentrations exceeding RRSCOs at a maximum concentration of 4,720 ppm (RRSCO 400 ppm). Other metals found at concentrations exceeding RRSCOs include: arsenic at a maximum concentration of 18.7 ppm (RRSCO 16 ppm), barium at a maximum concentration of 538 ppm (RRSCO 400 ppm), cadmium at a maximum concentration of 10.5 ppm (RRSCO 4.3 ppm), copper at a maximum concentration of 446 ppm (RRSCO 270 ppm), and cyanide at a maximum concentration of 140 ppm (RRSCO 27 ppm). There were no VOCs, PCBs, or pesticides detected in soil at concentrations exceeding applicable SCOs. Data does not indicate that there are off-site impacts in soil related to this site. Groundwater: Groundwater sample results were compared to the NYS Ambient Water Quality Standards and Guidance Values (groundwater SCGs). No VOCs were detected at concentrations exceeding groundwater SCGs. SVOCs exceeding groundwater SCGs occurred in five out of six groundwater monitoring wells across the site including benzo(a)anthracene at a maximum concentration of 0.08 ppb (groundwater SCG 0.002 ppb), benzo(a)pyrene at a maximum concentration of 0.13 ppb (groundwater SCG ND), benzo(b)fluoranthene at a maximum concentration of 0.08 (groundwater SCG 0.002 ppb), benzo(k)fluoranthene at a maximum concentration of 0.03 ppb (groundwater SCG 0.002 ppb), Chrysene at a maximum concentration of 0.07 ppb (groundwater SCG 0.002 ppb), and Indeno(1,2,3-cd)pyrene at a maximum concentration of 0.1 ppb (groundwater SCG 0.002 ppb). PFOA was detected in two out of six groundwater monitoring wells at concentrations above New York State's ambient water quality (AWQ) guidance values with a maximum detection of 43.8 parts per trillion (ppt) (AWQ SCG 6.7 ppt). PFOS was detected in one out of six groundwater monitoring wells at concentrations above New York State's guidance values with a maximum detection of 7.67 ppt (AWQ SCG 2.7 ppt). No VOCs, metals, pesticides, or PCBs were detected at concentrations above groundwater SCGs. Data does not indicate that there are off-site impacts in groundwater related to this site. Sub-slab Vapor and Indoor Air: Several chlorinated solvents were detected in the sub-slab vapor, most notably carbon tetrachloride at concentrations up to 6.86 µg/m3. Various petroleum VOCs were detected in the sub-slab vapor, most notably ethanol at concentrations up to 75.1 µg/m3. Several chlorinated solvents were detected in the indoor air samples, most notably methylene chloride at concentrations up to 5.35 µg/m3 which was also detected in outdoor air at concentrations up to 3.96 µg/m3. Petroleum-related VOCs were detected in the indoor air, including toluene at concentrations up to 1.85 µg/m3. Data does not indicate any off-site impacts in soil vapor related to this site.

Site Class Desc:	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Site Class Desc (Web):	
Site Class Desc (Geo):	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Assess DOH:	The site is vacant therefore, people are not expected to come into contact with site related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. Furthermore, environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.
Sitecode (Geo):	C734160
Data Source:	DEC Environmental Remediation Database Search - Remedial Site Search (Web); Environmental Remediation Sites; Remedial GIS (GIS); DEC Remediation Sites Boundaries (Geo)

Description:

Location: The Lofts at 1117 site (site) is a 0.46-acre property located in the Syracuse Westside community. The site is bounded to the north by West Fayette Street, to the south by a shopping plaza, to the east by a multi-tenant commercial building, and to the west by a parking lot (see Figure 1). Site Features: The site is relatively flat and contains two buildings connected by a second-story bridge. Both buildings were constructed in approximately 1900. Each building is three stories high and consist of brick-and-mortar construction. The total combined building space is approximately 29,063 square feet and both buildings are currently vacant. A drum and tank storage room is located in the southwestern corner of the southern building. The storage room contained several 5-gallon and 55-gallon drums as well as a bulk storage tank of heating oil. The remainder of the site consists primarily of asphalt pavement. Current Zoning and Land Use: The site and all adjoining sites are currently in a Class A Industrial District. The properties surrounding the site are currently used for commercial purposes and the site is currently vacant. Past Use of the Site: The site was originally developed for industrial purposes in 1900. Historical site uses include manure spreader manufacturing, gear manufacturing, hat manufacturing, toy manufacturing, screw-type machining, printing, and painting. Two historic spills occurred directly in front of the site along Fayette Street. Both spills were associated with vehicle crashes into nearby transformer poles and both spills were properly closed. Site Geology and Hydrogeology: The site is approximately 395 feet above mean sea level. The depth to groundwater ranges between 8 and 14 feet bgs and generally flows north-northwest towards Harbor Brook located approximately 250 feet from the site. The site contains historic fill material across a significant portion of the site from grade to a maximum depth of 9.5 feet bgs. Native soil located beneath the fill consists of fine silty clay and fine silty sand down to 12 feet bgs. It is then followed by a medium to coarse sand. Bedrock was not encountered at the soil depths sampled down to 20 feet. A site location map is attached as Figure 1.

Assessment:

Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Sub-slab soil vapor, indoor air, and outdoor air samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern include SVOCs and metals in soil and SVOCs and PFAS in groundwater. Soils: SVOCs detected at concentrations exceeding the protection of groundwater soil cleanup objectives (PGSCOs) occurred in four surface soil samples and four subsurface samples throughout the site and included: benzo(a)anthracene at a maximum concentration of 17 parts per million (ppm) (PGSCO 1.0 ppm), benzo(a)pyrene at a maximum concentration of 17 ppm (PGSCO 22 ppm), benzo(b)fluoranthene at a maximum concentration of 19 ppm (PGSCO 1.7 ppm), benzo(k)fluoranthene at a maximum concentration of 5.8 ppm (PGSCO 1.7 ppm), Chrysene at a maximum concentration of 16 ppm (PGSCO 1.0 ppm), and Indeno(1,2,3-cd)pyrene at a maximum concentration of

8.4 ppm (PGSCO 8.2 ppm) One SVOC, dibenzo(a,h)anthracene was detected in five samples a concentration exceeding Restricted Residential Soil cleanup objectives (RRSCOs) with a maximum concentration of 2.4 ppm (RRSCO 0.33 ppm). Perflurorooctanoic acid (PFOA) was detected in one soil sample above PGSCOs with a maximum concentration of 0.983 parts per billion (ppb) compared to the PGSCO of 0.8 ppb. Perfluorooctanesulfonic acid (PFOS) was not detected in concentrations exceeding the PGSCO. Several metals were detected at concentrations exceeding RRSCOs in four surface and 29 subsurface soils throughout the site, most notably mercury in the eastern portion of the site with a maximum concentration of 16.4 ppm (RRSCO 0.81 ppm). Lead was found in concentrations exceeding RRSCOs at a maximum concentration of 4,720 ppm (RRSCO 400 ppm). Other metals found at concentrations exceeding RRSCOs include: arsenic at a maximum concentration of 18.7 ppm (RRSCO 16 ppm), barium at a maximum concentration of 538 ppm (RRSCO 400 ppm), cadmium at a maximum concentration of 10.5 ppm (RRSCO 4.3 ppm), copper at a maximum concentration of 446 ppm (RRSCO 270 ppm), and cyanide at a maximum concentration of 140 ppm (RRSCO 27 ppm). There were no VOCs, PCBs, or pesticides detected in soil at concentrations exceeding applicable SCOs. Data does not indicate that there are off-site impacts in soil related to this site. Groundwater: Groundwater sample results were compared to the NYS Ambient Water Quality Standards and Guidance Values (groundwater SCGs). No VOCs were detected at concentrations exceeding groundwater SCGs. SVOCs exceeding groundwater SCGs occurred in five out of six groundwater monitoring wells across the site including benzo(a)anthracene at a maximum concentration of 0.08 ppb (groundwater SCG 0.002 ppb), benzo(a)pyrene at a maximum concentration of 0.13 ppb (groundwater SCG ND), benzo(b)fluoranthene at a maximum concentration of 0.08 (groundwater SCG 0.002 ppb), benzo(k)fluoranthene at a maximum concentration of 0.03 ppb (groundwater SCG 0.002 ppb), Chrysene at a maximum concentration of 0.07 ppb (groundwater SCG 0.002 ppb), and Indeno(1,2,3-cd)pyrene at a maximum concentration of 0.1 ppb (groundwater SCG 0.002 ppb). PFOA was detected in two out of six groundwater monitoring wells at concentrations above New York State's ambient water quality (AWQ) guidance values with a maximum detection of 43.8 parts per trillion (ppt) (AWQ SCG 6.7 ppt). PFOS was detected in one out of six groundwater monitoring wells at concentrations above New York State's guidance values with a maximum detection of 7.67 ppt (AWQ SCG 2.7 ppt). No VOCs, metals, pesticides, or PCBs were detected at concentrations above groundwater SCGs. Data does not indicate that there are off-site impacts in groundwater related to this site. Sub-slab Vapor and Indoor Air: Several chlorinated solvents were detected in the sub-slab vapor, most notably carbon tetrachloride at concentrations up to 6.86 µg/m3. Various petroleum VOCs were detected in the sub-slab vapor, most notably ethanol at concentrations up to 75.1 µg/m3. Several chlorinated solvents were detected in the indoor air samples, most notably methylene chloride at concentrations up to 5.35 µg/m3 which was also detected in outdoor air at concentrations up to 3.96 µg/m3. Petroleum-related VOCs were detected in the indoor air, including toluene at concentrations up to 1.85 µg/m3. Data does not indicate any off-site impacts in soil vapor related to this site.

Site Class Desc:	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Site Class Desc (Web):	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Site Class Desc (Geo):	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful

completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Assess DOH: Remedial efforts by responsible parties have eliminated contaminants. Site has been delisted.

Data Source: DEC Environmental Remediation Database Search - Remedial Site Search (Web); Environmental Remediation Sites; Remedial GIS (GIS); DEC Remediation Sites Boundaries (Geo)

Description:

Former Rockwell Plant site that is no longer in business. Several electrical transformers were dismantled in order to salvage the copper in them. During thedismantling an estimated 100 gallons of transformer oil containing PCBs spilled. The PCB oil spilled on the soil and sample analysis showed levels up to 510 ppm of Aroclor 1260 in one sample. DOT/DEC conducted a clean-up of the PCB spill. The abandoned site was secured & signs were been posted for public awareness. Waste fuels were suspected to have been burned on site. A Phase I study was completed. A PRP Phase II Investigation was completed in 1987. During the PCB oil spill clean-up a number of other areas of concern were revealed. Among the concerns were buried tanks, extensive areas of contaminated soil and waste oil in the collection sumps. In 1988 11 buried tanks and 300 cubic yards of contaminated soil were removed from the site. During this removal, spent petroleum by-products were also discovered. This site has had hazardous waste removed. Hazardous waste removal was completed in the Spring of 1990. Groundwater monitoring did not indicate contamination.

Assessment:

Site has been remediated. There is no indication of groundwater contamination.

Waste Code Details

Waste Code: B004
Waste Code Desc: PCB articles containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs, excluding small capacitors. This includes oil-filled electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers, rectifiers and cable.

Waste Code: B005
Waste Code Desc: PCB articles, other than transformers, that contain 500 ppm or greater of PCBs, excluding small capacitors.

Waste Code: D001
Waste Code Desc: IGNITABLE WASTE

Waste Code: D002
Waste Code Desc: CORROSIVE WASTE

Waste Code: D003
Waste Code Desc: REACTIVE WASTE

Waste Code: D004
Waste Code Desc: ARSENIC

Waste Code: D005
Waste Code Desc: BARIUM

Waste Code: D006
Waste Code Desc: CADMIUM

Waste Code: D007
Waste Code Desc: CHROMIUM

Waste Code: D008
Waste Code Desc: LEAD

Waste Code: D009
Waste Code Desc: MERCURY

Waste Code: D010
Waste Code Desc: SELENIUM

Waste Code: D011
Waste Code Desc: SILVER

Waste Code: D028
Waste Code Desc: 1,2-DICHLOROETHANE

Waste Code: P106
Waste Code Desc: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

Waste Code: U031
Waste Code Desc: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Waste Code: U077
Waste Code Desc: ETHANE, 1,2-DICHLORO- (OR) ETHYLENE DICHLORIDE

Waste Code: U144
Waste Code Desc: ACETIC ACID, LEAD(2+) SALT (OR) LEAD ACETATE

Waste Code: U154
Waste Code Desc: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U160
Waste Code Desc: 2-BUTANONE, PEROXIDE (R,T) (OR) METHYL ETHYL KETONE PEROXIDE (R,T)

Waste Code: U188
Waste Code Desc: PHENOL

Waste Code: U219
Waste Code Desc: THIOUREA

Waste Code: U226
Waste Code Desc: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Caller Remark:

"phase 2 results soil boaring and wells"

DEC Remark:

"11/30/2023 DEC (Karen Cahill) contacted Bill Sisco with Labella. The property owner hired Labella in October 2023 to perform a Phase II ESA investigation on a his 3.5 acre lot made up of three tax parcels located along Erie Blvd West extending from South Geddes Street west to the railroad bridge. The Phase I was performed by C&S for a potential buyer in March 2023. The buyer backed out of the purchase and the current owner paid C&S to get a copy of the Phase I report. The spill is associated with the 837 Erie Boulevard West parcel (tax ID 109.-09-16). According to the Phase I and II reports, the property was purchased by Ashland Oil & Refining in the 1950s and operated as a gas station until the late 1970s. Historical aerials show four pump islands on the parcel. The remainder of the Phase II property consists of an abandoned repair shop, an auto upholstery shop, and a trucking office. The November 2023 Phase II investigation included a GPR survey of the former gas station area; and installation of 16 soil borings and five 1-inch groundwater wells. An approximate 30x25 foot anomaly, suspected to be the UST area, was identified in the GPR survey at 837 Erie parcel. Bill stated that there was an apparent sheen on soil in four of the borings installed in the UST area along with elevated PID readings. Petroleum-related VOCs were detected in soil and groundwater. Bill will confer with his client regarding removal of the tanks which will also need to be registered per PBS requirements. He will forward me the Phase and II report once completed. (KAC) 12/05/2023 DEC received a copy of the August 2023 Phase I ESA report prepared by C&S. See D2. 12/13/2023 DEC received a copy of the December 2023 Phase II ESA report prepared by Labella. See D2. 12/15/2023 DEC sent Letter of Responsibility (LoR)to owner, Gary Saxenian. 1/9/2024 Telecon with owner, Gary Saxenian. He stated that the 1977 deed between his father and Ashland Oil states that Ashland will warrant the property up to $25K (amount of sale). Requested a copy of the relevant pages from the deed. Gary indicated he will attempt to reach out to Ashland. Ashland sold their interest oil and refinery business to Marathon Oil in 2005.(KAC) 1/13/2024 DEC with Gary. He provided me with paper copy of partial deed book pages and survey. I will attempt to reach out to Ashland to get appropriate environmental or EHS contact.(KAC) 1/16/2024 1300 hrs: DEC Spoke with Joanne at Ashland Oil Emergency response line at 800-274-5263. Provided site address and my contact information. Received phone call at 1500 hrs from Shannon Lloyd with Ashland Oil. He verified that Ashland formed a joint venture with Marathon Oil for petroleum side of business. DEC will forwarded the spill report, deed pages, and the Phase I and II reports to his attention. 1/23/2024 DEC received email from Dani Gugliemotto, Ashland's remedial project manager, stating that she is working on this internally and has advised their consultant, Antea, to begin a review of Phase I and II reports. 1/26/2024 DEC sent copy of full abstract of title to Ashland. 2/14/2024 DEC sent LoR to Ashland and Saxenian Family Trust. 4/4/2024 Gary contacted DEC regarding status of Ashland's response. Informed him that DEC granted Ashland a 60-day extension, with a response due May 8th. He stated that he may have an interested buyer and would prefer that the cleanup is completed prior to the sale. DEC advised that if Ashland decline responsibility, then DEC would perform the tank removal and any associated soil excavation. 5/8/2024 DEC received letter response from Ashland with commitment to move forward with UST removals. 5/20/2024 DEC sent letter to Ashland requesting a cleanup plan within 5 days. 5/24/2024 Cleanup plan received from Antea, Ashland's consultant. Response sent to Antea and Ashland indicating that the plan submitted was not appropriate for a spill cleanup. 5/31/2024 Email response received from Antea PM stating that they will proceed with scheduling the site visit and conducting the cleanup in accordance with DER's spill program. Access agreement sent to Gary requesting the executor of the trust sign on behalf of the Saxenian Family Trust. 6/11/2024 DEC sent email to Antea inquiring if access has been granted. 6/12/2024 Signed access agreement received from Antea. 6/14/2024 Site visit conducted with Antea and owner. Antea's contractor, Underground Detective, performed follow up GPR survey. Three rectangular anomalies noted in general location of suspected UST area. Approx dimensions 20'x8', 10'x4' and 10'x4'. 6/28/2024 Email sent to Antea requesting status of tank removals. 7/2/2024 Email received from Ashland that the removals will be scheduled once they have the bids in and that Antea will be providing a figure depicting the results of our geophysical survey against those in the Phase II report. 7/18/24 Draft STIP sent to RSE. 7/22/2024 Spill transferred to DEC responder Dan Miller. 8/13/24 Owner contacted DEC (KAC) asking for an update on schedlue. Per Ashland, they are regrouping with Antea regarding estimates from contractors. Relayed this to owner. 8/23/24 Owner contacted DEC again. (KAC) 8/26/24 Sent email to Ashland inquiring on schedule and asked her to coordinate with Dan Miller going forward. (KAC) 9/17/24 Received email from Ashland stating that they are finalizing bid review and plan to have a vendor selected next week. They would like to complete an initial day of test pitting and complete a second mobilization for the tank pull. (KAC)"

Survey Complete:	YES		
Survey:	Class B Fire Suppression Foam Usage Survey - New York State Bulk Storage Facilities		
Q. 6:	NO		
Q. 7:	NO		
Q. 8:	unknown		
Q. 9:	unknown		
Q. 10:	unknown		
Q. 11:	unknown		
Q. 12:			
Q. 13:			

Reference:

If a respondent indicated that the facility used/stored/disposed PFOA/PFOS substances, it does not necessarily mean that there is an environmental/public health concern associated with that facility. Also, if a respondent indicated that they currently/formerly used, stored, disposed of, or released Class B firefighting foam it does not necessarily mean that the foam contains/contained PFOA/PFOS since many Class B foams do not contain these substances. DEC is in the process of reviewing/evaluating the returned surveys to determine if additional follow-up or study is needed.
Return rate: 91 surveys were sent to facilities; 90 were returned completed as of June 1, 2017.
Questions 1 & 2 relate to name and address; questions 3-5 relate to facility ownership.
Q. 6: Is any Class B fire suppression foam currently stored and/or used at the facility?
Q. 7: Has any Class B fire suppression foam ever been stored and/or used at the facility?
Q. 8: Has Class B fire suppression foam ever been used for training purposes at the facility?
Q. 9: Has Class B fire suppression foam ever been used for firefighting or other emergency response purposes at the facility?
Q. 10: Has the facility ever experienced a spill or leak of Class B fire suppression foam?
Q. 11: Has your facility ever been responsible for the use of Class B fire suppression foam at a location other than the facility (i.e. offsite training, emergency response, or spill)?

Site Class Desc:	No Further Action at this Time: Sites are given a classification of "N" when: a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program; b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced; c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.
Site Class Desc (Web):	No Further Action at this Time: Sites are given a classification of "N" when: a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program; b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. 110 North Geddes St
Syracuse NY | **PFAS**

Facility ID: FDP1561
County: Onondaga
Survey Complete: YES
Survey: Class B Fire Suppression Foam Usage Survey - New York State Fire Departments
Q. 6: YES
Q. 7: YES
Q. 8: YES
Q. 9: NO
Q. 10: NO
Q. 11: YES
Q. 12:
Q. 13:
Reference: If a respondent indicated that the facility used/stored/disposed PFOA/PFOS substances, it does not necessarily mean that there is an environmental/public health concern associated with that facility. Also, if a respondent indicated that they currently/formerly used, stored, disposed of, or released Class B firefighting foam it does not necessarily mean that the foam contains/contained PFOA/PFOS since many Class B foams do not contain these substances. DEC is in the process of reviewing/evaluating the returned surveys to determine if additional follow-up or study is needed.
Return rate: 91 surveys were sent to facilities; 90 were returned completed as of June 1, 2017.
Questions 1 & 2 relate to name and address; questions 3-5 relate to facility ownership.
Q. 6: Is any Class B fire suppression foam currently stored and/or used at the facility?
Q. 7: Has any Class B fire suppression foam ever been stored and/or used at the facility?
Q. 8: Has Class B fire suppression foam ever been used for training purposes at the facility?
Q. 9: Has Class B fire suppression foam ever been used for firefighting or other emergency response purposes at the facility?
Q. 10: Has the facility ever experienced a spill or leak of Class B fire suppression foam?
Q. 11: Has your facility ever been responsible for the use of Class B fire suppression foam at a location other than the facility (i.e. offsite training, emergency response, or spill)?

Caller Remark:

"Caller advised to reference Harry Warner Historical spill clean up is pending"

DEC Remark:

"08/12/20 Met onsite with owner Jim Ranalli (Rinalli ALA), contractor Josh Lecher (Top Notch Property Management) and consultant, Sam Miller (CHA). PCB aroclor 1248 detected in soil boring SB-11 at 73 ppm (0.5-2'). Aroclor 1260 was also detected in this boring at 75 ppm (9.5-11'). Test pit installed and sampled at approximate location of SB-11. Discussed investigation plan and EPA TSCA Self-Implementing Cleanup and Disposal Plan (SIP)

approach. 08/17/20 CHA submitted Request for spill closure based on test pit sample results. 09/15/20 Sent comments to CHA on draft SIP. 10/26/20 - SIP approved requiring EE and SGMP. 11/02/20 - Final verification samples received. Soil excavation complete 12/18/20 - EE recorded. Spill Closed See decdocs for Phase II Investigation Report (Aug 2020, SIP and other documentation)."

Assess DOH:	The site is in an area which is served by public water. NYSDOH has observed evidence of site trespass during a past site investigation. NYS DEC completed a drum removal in 1991. The City of Syracuse conducted follow-up soil sampling in the Spring of 1992 and no residual contamination was found. The site was delisted in December 1992 and there are no known outstanding health concerns associated with exposure to site contaminants.

Description:

Royal Research Labs was a paint stripping firm and manufacturer of plastic automotive parts. It was located on Shonnard Street. The facility was declared unsafe and the building was condemned by the Syracuse Fire Department in the early 1980's. Approximately 50 drums and containers of chemicals were moved from the Royal Research Lab to the Tip-Top Bakery building, which is also located on Shonnard Street. Some of the chemicals have spilled onto the floor of the building. Analytical results of samples taken, reveal that some of the wastes were ignitable and corrosive. Many of the drums have been removed from the building, but a few still remain scattered through-out. Some were found to contain hazardous waste. In 1991, the DEC initiated a final drum removal. The drum removal was completed by November of 1991. A thorough follow-up investigation with sampling was conducted by the City of Syracuse during the spring of 1992. Sampling analysis revealed no residual contamination from the hazardous waste.

Assessment:

All remaining drums & containers that were stored in this building were removed by November of 1992. The City of Syracuse's follow-up investigation revealed no residual contamination resulting from the drums.

Assess DOH:	Contaminants have been removed or covered. There are no exposures occurring from this site.
Data Source:	DEC Environmental Remediation Database Search - Remedial Site Search (Web); Environmental Remediation Sites; Remedial GIS (GIS); DEC Remediation Sites Boundaries (Geo)

Description:

Location: The Syracuse Fire Training School Site is a 6.2-acre site located in an urban area. The site is approximately 3.5 miles east of the intersection of County Route 55 and Industrial Road. The Site is bounded by State Fair Boulevard to the west, private properties to the north, Route 690 ramp to the east, and a National Grid natural gas right-of-way to the south. Site Features: The site is relatively flat and includes several buildings including a five-story fire-training tower, a cold storage facility, and a live burn building surrounded by paved parking lots and gravel-covered storage yards. The occupied buildings include offices and vehicle service areas. A small area of landscaping is present near the office building. Harbor Brook runs along the northeaster corner of the site. Current Zoning and Land Use: The site is currently active and is zoned for commercial use. The surrounding parcels are currently used for a combination of commercial, light industrial, residential, and utility right-of-ways. The nearest residential area is about 50 yards south on State Fair Blvd. Past Use of the Site: The Fire Training Center was constructed in 1948. It consisted of a five-story brick fire training tower; an underground 20,000 gallon cistern, and an above-ground bermed burn pit. During its use, the unlined burn pit was filled with waste oil, fuel, or wasted

solvents, ignited, and then extinguished by trainees using chemical or waste spray. In 1969, the Fire Training Center was expanded eastward to its present size by filling in a wetland area with debris from the construction of Route 690. The Syracuse Fire Training Center was used by the City of Syracuse and by Niagara-Mohawk to train and educate fire department personnel, introducing them to different types of firefighting techniques and situations. The fuels used for the fires varied from wood, mattresses, and furniture, and flammable liquids such as gasoline, diesel fuel, jet fuel, waste solvents and waste oils. During various periods of the training facility's history, fire department personnel, along with Niagara Mohawk, stored waste oils and flammable liquids in 55-gallon drums at several locations throughout the Site. In the fall of 1981, the 55-gallon drums that were stored along the northern fence line were removed by Niagara Mohawk, at the request of the City of Syracuse Fire Department and the NYSDEC. Each drum was analyzed by Niagara Mohawk personnel for PCBs. Site Geology and Hydrogeology: The Fire Training Center was built upon an industrial and urban fill area. The urban fill includes construction and demolition debris, broken pottery, concrete, slag, ash, cinder, bricks, and wood. The site is located in the Onondaga Lake Basin, within a glacially formed valley. The area around the Site was originally a large bog encompassing the southeastern end of Onondaga Lake. The area was gradually filled in with wastes from local industries and municipalities. Deep groundwater in the area of the Fire Training Center and the southern end of Onondaga Lake are saline as a result of salt deposited during the evaporation of a sea 425 million years ago, during the Silurian geologic period.

Assessment:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCBs, lead, polycyclic aromatic hydrocarbons (PAHs), and mercury. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.

Nominated by:
Describe the Site: The site, which was formerly a coal gasification plant, may have many hazardous substances due to the processes; there were no records of disposal on the site. This site is under consent order.
Describe the Threat:

Mill scale wastes contain a high concentration of chromium. The potential exists for contaminant migration.

Regulatory Agencies Involved:
Preparer:
Nominated by:
Describe the Site: The site was a limestone quarry from 1882 to 1911. TNT was manufactured at the site during WWI and more recently pesticides, toulene and waste paint were stored on site. Geology on the area is karst. There is documentation of explosions during the time of TNT manufacturing. This site was referred to the Division of Solid Waste on 6/28/91.
Describe the Threat:

Nearby homes have wells as only available water supply. The potential to contaminate groundwater, as well as the potential for runoff to contaminate a pond at the head of Geddes Brook both exist. Lead contamination - apparentiy from shooting practice.

Caller Remark:

"Hello, I am taking the time to contact your department about gasoline spills, over 5 gallons sometimes I have observed, at the gas station at Sam's Club on Erie Blvd. in Syracuse, NY. I have spoken with some of the station attendants about cleaning the spills and they say that they will get right on it, but they don't do anything. One time one of the attendants stated that it will just evaporate, so what's the big deal? Recently, one of the attendants stated that he will get around to cleaning up the gas spill after he has spoken with the customers about signing up for credit cards and bonus programs. This last statement is actually what prompted this email. He told me that the management of Sam's Club has instructed the workers at the gas station that compliance with DEC is secondary to the instruction of pushing credit card applications, which is their primary focus and job security! Really? Can this be true? My concern about the gas spills at this particular location, and hence this email, is because it is located so close to wetlands. I do wish to remain anonymous because I do not wish for any problems when I go shopping at Sam's Club. Please let me know if your department has any questions. Sincerely, Ron"

DEC Remark:

"Kevin Kemp has been informed of the caller's report. He will take further action PBS guidlines."

Caller Remark:

"CALLER REPORTS THAT WHILE PUMPING GAS AND RETURNING NOZEL BACK TO DISPENSER THAT THE GAS CONTINUED TO PUMP OUT AND SPILL ON GROUND, AND HIMSELF: CALLER WAS CONCERNED OVER MATERIAL SPILLED, AND REPORTED TO STORE CLERK: CALLER ALSO FOLLOWED UP WITH A CALL TO THE SPILL HOTLINE:"

DEC Remark:

"8/11/06 - Called the person who reported the spill. Hestated that the nozzle failed to shut off when he was done filling the vehicle with fuel. Approx 5 gallons of fuel spilled to the ground on pavement. I also called Delta Sonic Carwash and interviewed the manager, Josh Walless. He stated that the customer had locked the nozzle open causing the fuel to continue pumping. Cleanup was initiated by the Delta Sonic personnel. No fuel entered storm drains or waterbodies. "

DEC Remark:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was CM 04/22/96:15:15 MYSELF AND ECO VIELE OBSERVED WERE THE COMPLAINTENT HAD TAKEN PICTURES OF AREA OF CONCERN. THERE WAS A ENGINE BLOCK ON PLYWOOD. SOME OIL HAD SEEPED ON TO THE CRUSHED STONE. THE AREA IN QUESTION WAS IN FRONT OF HIS GARAGE AND IN HIS DRIVEWAY. I INTRODUCED MYSELF AND ECO VIELE TO MR. HOWARD PHILLIPS(THE PROPERTY OWNER). I ASKED MR. PHILLIPS TO BE MORE CAREFUL WITH HIS PRACTICES IN REGARDS TO HANDLING WASTE OIL IN THE FUTURE. I ALSO ASKED MR. PHILLIPS HOW HE DISPOSED OF HIS OIL. HE INFORMED ME THAT A LOCAL GARAGE PICKED IT UP FOR HIM. HE DID NOT HOWEVER HAVE ANY RECIEPTS FOR REMOVAL. I INFORMED MR. PHILLIPS TO MAKE SURE HE OBTAINS RECIEPTS IN THE FUTURE. I INFORMED MR. PHILLIPS THAT ECO VIELE HAS THE ABILITY TO ISSUE A TICKET FOR DUMPING MOTOR OIL. WE DID NOT ISSUE A TICKET. "
